DILL MAKING PLANS FOR COPYRIGHT BILL

STATIONS THAT SELL TIME WOULD PAY ROYALTY

Proposes Charge for Music Proportional to Income Derived by Broadcasters Through Its Use

WASHINGTON.—A new copyright bill, designed to settle the present row between broadcasters and musical interests over royalties, will be introduced in the Senate by Senator C. C. Dill of Washington, early in this session. Senator Dill has spent a lot of time this summer looking into the question and has about decided the kind of bill he will introduce.

"My bill," says he, "will extend the present copyright law to take in the broadcasting of musical compositions. The subject is very complicated, and I believe the Senate will want to hear a lot on both sides of the argument before final action is taken."

"In the case of stations which sell time, I think a reasonable royalty should be paid to the holder of the copyright. I do not think that broadcasting stations should be compelled to deal with societies which are supposed to represent the copyright holders, but that they should deal directly with the holder of the copyright."

No Set Copyright Charge

"I think the royalty paid by a station for broadcasting copyrighted musical compositions should depend to a large extent on the charge made by the station in selling time. When the charge is big, the royalty should be proportionately increased. When the charge is small, the royalty should be smaller."

"I am not sure what we can do about stations that do not sell time. I think in the case of most stations that do not sell time, they derive profit from the station in publicity or good will. This, of course, cannot be reckoned in dollars and cents. It would seem that the royalty paid by these stations should be in proportion to the estimated size of their audiences, although I don't know how we will ever be able to figure that out."

"Music in the Home" Is Essay Contest Subject

WKAF, Milwaukee, to Give Baldwin Grand as Prize

MILWAUKEE.—WKAF, the Kesselman O'Driscoll-Hotel Antlers station, of this city, is conducting a most novel contest, the award to the winner of which will be a \$900 grand piano.

The contest has been under way for a few days and will continue until December 25. Every listener—man, woman, or child, whether he or she lives in Wisconsin, Illinois, New York, any other state, or Canada—has the privilege of participating. The piano to be given as a prize is a Baldwin, and donated through the courtesy of the Kesselman O'Driscoll music house.

In the WKAF contest all that is necessary is that the listener send in his name and address to WKAF, Hotel Antlers, Milwaukee, and in return he or she will receive the particulars of the contest. It involves the writing of a 35-word "essayette" on "Music in the Home." The particulars as sent out by WKAF explain the essentials to be covered in these 35 words.

Musical Comedy Stars Give Entertainment Over KYW

CHICAGO.—Members of the musical comedy, "The Daughter of Rosie O'Grady," appearing here, recently entertained the Radio audience of Station KYW with an hilarious half hour's entertainment. Among those who appeared on the program were Pat Rooney, III, and Marion Bent, stars of the play, as well as Frank Corbett, Miss Vivienne Glenn and Pat Rooney's Syncopating Symphonists.

Pat Rooney, recognized in the theatrical world as one of the greatest of dancers, gave a conglomeration of zippy cadence in clog, while Miss Glenn and Mr. Corbett entertained with vocal selections and the Syncopating Symphonists spilled volumes of the latest jazz numbers.

To Have Taxi Planes with Radio

STOCKHOLM, Sweden.—The Swedish Air Traffic society is planning to put into service a fleet of "taxi-airplanes," which the public will be able to hire per hour or per run, just as it hires a taxicab. One interesting feature about these air taxis is that it is proposed to fit them with Radio receiving sets, in order that the tedium of flying through the clouds may be relieved for the passenger by listening in to the various stations' musical programs.

BEAUTY ON COVER IS NOTED PIANO TAMER

AN ARTIST from the crown of her head to the tips of her fingers and every line a line of grace and beauty—that is the description of the decorative darling on the Radio Digest cover this week. She is Miss Lucille Fischer of the Lucille Fischer School of Music, Chicago, which shows that she has brains as well as beauty and is something of a business executive. When Balaban & Katz, the moving picture theater people of Chicago, want an exceptional pianist to please the customers at the Chicago theater and the Radio listeners over WMAQ, they send for Miss Fischer and the wildest piano eats out of her hands as happy as a kitten whether she feeds it jazz or the most difficult classics.

Harmonica Programs from WEAf Are Again on Air

NEW YORK.—As a result of the popular response to the series of harmonica programs and lessons broadcast through WEAf last winter by the "Hohner Harmony hour," they have been resumed from WEAf, being heard on Fridays at 9 p. m., eastern time, through WEAf, WJAR, WEEI, WOO, WCAP, WGR and WWJ.

So far as is known, this is the first attempt which was ever made to give instructions by Radio for the playing of a musical instrument.

Movie Stars Talk at Station KFWB

Warner Brothers Frolic Brings Many Luminaries of Screen Before Mike as Guest Announcers

HOLLYWOOD, Calif.—"Pretty soft for KFWB," is the verdict of station managers, who listen to the Warner Brothers' frolic from 10 to 11 p. m., pacific time, each night at that station.

During the past two months the following Warner Brothers movie stars have appeared at KFWB as guest announcers: Syd Chaplin, Alice Calhoun, John Haron, Irene Rich, Huntley Gordon, Dolores and Helene Costello, Theodore Lorch, the heavy in "The Man on the Box," Marie Prevost, Gayne Whitman, Louise Fazenda, Willard Louis, Lee Duncan and Rin-Tin-Tin, Vera Reynolds, Matt Moore, June Marlow, who plays opposite John Barrymore in Don Juan, Dorothy Devore, Patsy Ruth Miller and a number of lesser stars. Several famous directors have tried their hands at directing a Radio program, among them being Erle Kenton, Bill Beaudine, known to fans as B. B., and Chuck Reisner, who in addition to directing Syd Chaplin's comedies usually plays a part in them.

A broadcasting station that furnishes a regular program by high-grade artists and whose equipment furnishes an output of dependable quality and steadiness, costs in the neighborhood of from \$30,000 to \$100,000 a year to operate.

DELUGE OF COLLARS FLOODS ANNOUNCER

LISTENERS SEND McNAMEE MANY UNUSUAL GIFTS

Remark Made in Pittsburgh That He Couldn't Keep Collar Clean Brings Aid

NEW YORK.—Little collars, big collars, soft collars, starched collars—forty collars of every description—were among a large number of unusual personal gifts sent to Graham McNamee, popular Gold Medal announcer of WEAf, by Radio fans who heard his statement that he couldn't keep his collar clean at Pittsburgh while he was putting the play-by-play account of the World Series on the air.

Besides the collars, McNamee received a hand-forged horseshoe, about as big as a dime, a basket of grapes, a luscious chocolate cake, eggs, some of which before reaching him had "gone wrong," a dictograph cylinder (broken in transit), which evidently contained a record of his broadcasting, a sweater and a bead watch fob with his initials worked in.

Interesting Cross Section of Audience

Thousands of letters were received from fans in every part of the country expressing their appreciation and revealing many interesting angles on the variety of listeners and on the most unusual conditions of reception.

Hundreds of disabled war veterans, hospital patients, elderly men and women and others who were unable to attend the contests seemed to have received the greatest delight from the games. In several cases prisoners used half of their letter-writing privilege (of two a month) to express thanks for the broadcasts.

Lighthouse and lightship keepers, isolated farmers and farm wives, striking coal miners in Pennsylvania, old maids who didn't understand the game, former ball players, priests, ministers and school children enjoyed the series with equal enthusiasm—and sent collars.

SHORT WAVES

By Marcella

The team of Little and Small, which became so popular last season, teams no more. It is reported that matrimonial entanglements of Jack Little broke up the team. Jack Little is still touring the stations, and so is Paul Small, but both are alone.

The "Harmony Girls," Grace Ingram and Edith Carpenter, are now doing their duets over KYW's mike. Hard to beat them, isn't it. No, neither of them is married.

Lambdin Kay, "The A-a-t—lan—tah Journal," is rather a set bachelor, I fear. Too bad, isn't it, when one of us girls would be so proud of him!

Another man I like is "Bill" (W. G.) Hay, formerly of KFKX, Hastings, and WOK, Homewood. Heard him the other night at WGN. He sure picked a dandy cook in Mrs. "Bill" too. I know because I've eaten her lemon fluff pie. By the way, lady friends, Bill is only in Radio as an avocation. His business is—ah, guess—ladies' ready-to-wear and he's located right across from the Drake hotel on Michigan boulevard, Chicago.

Kay Ronayne, WEBH singer on the regular staff, is a wonder when it comes to coiffures. Every night she wears it different. Boy friends, you must go up to the Crystal studios of the Edgewater Beach hotel and put your noses against the plate glass window.

What deep secret would you like to know about your favorite broadcast star? Drop me a note, girls, and I'll do my best to answer it here.

—Marcella.

Canadian Radio Convention

MONTREAL, Canada.—Under the auspices of the Quebec division, the first all-Canada convention of the American Radio Relay league was held here recently. This convention brought to Montreal some of the most eminent Radio experts on the continent. Among them was J. I. Thompson, chief engineer of the Marconi company, who has just returned from England where he has been making tests of beam transmission, which is to be installed between England, Canada and Australia to unite the Empire by Radio.

WGES Broadcasts Church

CHICAGO.—Services from the Austin Methodist Episcopal church here, are now broadcast every Sunday morning from WGES, Oak Park. At 10:15 a. m., central time, the service opens with a pipe organ concert and singing by the choir.

Looking Ahead

Back in 1921 when Radio Broadcasting was in its swaddling clothes, along came the Harmony Girls, now of KYW, Chicago, singing lullabys and thrilling the world's first Radio listeners. And now that Radio has grown up to knee pants they are still with it, as sweet and wonderful as ever. Next week's Radio Digest tells the tale with pictures.

Saws, Pitchforks and Numerous Other Ancient and Honorable Implements of Toil step out of their usual vocations and become musical instruments for Radio listeners. Queer contraptions from foreign lands also contribute their eccentric harmonies to the grand ethereal chorus. See the pictures and read about them in the next Radio Digest.

The Coo Coo Club at WTAM Broadcasts the Very Elixir of Life and has a very interesting history. Consider the aged little canary at Madison, Wis., which had given up singing three years ago, then suddenly came to life and sang like a two-year-old when the family Radio brought in the Coo Coo club. Story in next issue.

A Galaxy of Southern Beauty Connives with Mike at KWKH, the Shreveport, La., station to give listeners over a wide area a thrill through the air. Read about KWKH in the next Radio Digest. Oh yes, and see pictures of the beauties.

The Owner of a New Christmas Set will find that Mr. Ryan continues his discussion of installing and care in next week's issue. There is much for the novice to learn to get best results.

Wiring the Straight-8 Super-Heterodyne will be the third article of the series by Mr. Christen and Jacques Fournier. This receiver is very close to the "last word" as it combines the great pickup of the outside aerial with the range and selectivity of the super.

Applied A. B. C. Principles of Radio, as illustrated by comparison to a railroad system, takes up the increase of sound volume next week.

LIBERTY BELL TO PEAL FREEDOM

CONTEST IS ON FOR RADIO PLAY SCRIPT

DRAMA LEAGUE JOINS WLS TO PUT SHOW ON AIR

Prize-Winning Play to be Staged Over Stations of Country by Special Company

CHICAGO.—For the purpose of improving Radio programs a national Radio play contest has been launched through the joint efforts of the Drama League of America and WLS, the Sears-Roebuck Agricultural Foundation station, Chicago.

The announcement of this nation-wide contest to find the best Radio play was recently made by George Junkin, field secretary of the Drama league, who as chairman of the contest committee worked out the details of the contest with D. D. Richards, assistant director of WLS.

To the victor of the contest will be given \$500 in cash and a silver loving cup, in addition to national fame as writer of the best Radio play and the distinction of having assisted in producing better programs for the millions of the country's ether audience.

Three Prizes in All

A second prize of \$200 will be awarded to the runner-up and for the third best \$100 will be given. Any man, woman, or child in the United States is eligible to submit manuscripts of their plays. The contest will be conducted under the auspices of the Drama league. The prizes have been donated by WLS. According to the rules, the contest will close February 1, 1926 and all manuscripts must be received on or before that date.

As soon as the best play has been selected by a committee of experts chosen by the Drama league, preparations will be immediately made to produce the prize-winning play through WLS and many other stations of the country by means of a special company under the direction of the league. The rehearsals will be so timed that the nation's best Radio play will be produced for the benefit of the air audience during National Drama Week, February 14 to 20.

Requires Special Technique

"Radio will not allow any sly stage business", said Mr. Junkin. "Glances, asides and business with props cannot be put over to the Radio audience. Entrances and exits must in some way be told in the action of the play. Just as the movies brought about the new drama and a new way of presenting it, so will Radio. Sounds will be the principal vehicle. Bells of all sorts, church, dinner, telephone, house and others can be used to advantage. Rain, storms, musical backgrounds, horses, airplanes, automobiles—all have sounds which can be duplicated and will lend life to the words and action of the Radio play.

"Just as the movies have developed from the old-time chase, the presentation of fire departments in action and people shown merely walking and riding, to the presentation of the very best in drama, so Radio must take on another and more permanent form of presentation if it is to be expanded and live in the popularity of the greatest audience in the world."

Rules of Contest

The rules which will guide the contestants in writing their plays are as follows:

Any play submitted must be original and not have been printed.

All manuscripts must be typewritten double spaced. The author's full name and address should be sent with the manuscript but not on it. Manuscripts will not be returned.

Original one-act plays, eighteen to twenty-five minutes in length, are desired.

Few characters—maximum, five principals. Accompany action with notes on appropriate sounds. Farce, comedy, drama, melodrama, tragedy or mystery plays are satisfactory. Plays must be clean and wholesome material, and must not have material which would be objectionable to any sect or nationality.

Write plays as though they were to be produced for the blind. Everything necessary in the action must be made plain (to the ears).

All rights to the winning plays will be the property of WLS.

All manuscripts must be sent to WLS, Hotel Sherman, Chicago.

First Irish Station Is 2RN

LONDON, Eng.—The first broadcasting station in the Irish Free State has been erected by the Marconi company on the outskirts of Dublin. The transmitter, which will probably operate on a wave length of 390 meters and will use the call sign 2RN, is a 1,500-watt set.

East-West Classic Will Be Broadcast by KPSN

Pasadena's New Station Will Put Account on Air

PASADENA, Calif.—The big East vs. West football classic, held annually in the Rose Bowl during Pasadena's Rose festival will take place as usual this year on New Year's Day with the powerful eastern eleven making the journey to the coast to take on the western representative team.

The big intersectional game, held at a time when perfect football weather prevails in southern California, always draws a capacity crowd. This year the game will be broadcast for the first time, Pasadena's new station, KPSN, doing the broadcast by remote control and telephone lines. KPSN operates on 315.6 meters with 1,000 watts, and should be heard some distance.

NORSE BELL RINGERS GIVE UNIQUE PROGRAM

Premiere Artists of Europe Play Before KYW Microphone

CHICAGO.—A unique bit of program of the highest standard was recently broadcast from Station KYW when the Scandinavian Bell Ringers, recognized as the world's premiere organization of this kind, featured the Edison program.

The group consists of G. J. Holstrom, A. J. Holstrom, Theodore Kwanstrom, Edward Sundelin, under the direction of Alfred Josephson. In the different selections from 189 to 200 bells were played on an instrument that required one and one-half years to construct. The bells were manipulated by leather cords rather than striking them with a wand.

The entertainers are touring America, sponsored by Europe's greatest critics.

RADIO BEAUTY IS HIGH JUMPER

Mercedes LeCorgne has been "tickling the ivories" at WSMB, New Orleans, since its opening and her popularity continues to grow. In addition to being a talented musician and extremely easy to look at, she is champion high jumper of the Southern A. A. U.

Sydney Australia Station Enters Educational Field

WASHINGTON, D. C.—Educational sessions by Radio for the benefit of school children are being broadcast from the Sydney, Australia, station, 2FC.

A typical session for primary pupils recently included the singing of Alfred Hill's Maori Song, and an explanation of Mr. Hill's work at the university. Two "talks" followed, one on nature study by a graduate in the science, the other recalling that this year is the 150th anniversary of the Battle of Lexington.

Radio Aids Indians of Mexico

MEXICO CITY, Mexico.—The Mexican government announces that Radio is now being used to further the education of the Indians throughout the country. Reception posts have been installed in the most populous Indian centers, and instruction, varied by Indian music and entertainment, is being broadcast in no less than 17 different native dialects.

Opening Phrase Is Used to Send Letter to Announcer

NEW YORK.—Uncle Sam put one over on a Boston Radio fan and incidentally caused him to lose a bet. This particular resident of the Hub was willing to wager that a letter with no other address than "Good evening ladies and gentlemen of the Radio audience" would never reach Graham McNamee, popular announcer of WEAF.

This is the phrase McNamee invariably uses in making his opening announcements. Accordingly a letter so addressed with absolutely no reference to city or state on the envelope was dispatched.

To Broadcast Astronomy

WASHINGTON, D. C.—The Smithsonian institution and Station WRC have arranged with Prof. Harlow Shapley, director of the Harvard college observatory, to broadcast in Washington a selection of the Harvard observatory talks, under the direction of Dr. Shapley.

RADIO TO GIVE SOUND OF OLD RELIC TO ALL

Priceless Emblem of America to Herald 150th Year of Independence

Ring to Go World Over

December 31 to Mark Great Radio Feat—Millions of People Will Hear

PHILADELPHIA.—A wire interconnection and relays of Radio broadcasting that will reach every corner of the North American continent will carry the voice of the Liberty Bell throughout the land at the stroke of midnight, December 31, the moment when the new year, the 150th of American independence, is ushered in.

The shot fired at Lexington, was in an idealistic way, heard around the world, but on this occasion the real voice of liberty will be actually carried overseas to all peoples, if arrangements now under way are completed. It is planned to connect by means of Radio relays with several of the powerful European stations to rebroadcast the sound of the most famous bell of history, the ringing of which resulted in a new freedom for a country and an inspiration for greater ideals of liberty for the world.

Liberty's Sound to Surge Through Air

But once before has the sound of the Liberty Bell been sent over the country—on the occasion of the installation of the transcontinental telephone wire. Even then the sound was confined within a wire. This time the voice will fill the air; envelop the continent, as completely as the spirit of independence once surged over the Colonies.

Philadelphia is planning a colorful ceremony to mark the event and the traditional New Year's reception of the mayor will be transferred from its accustomed place in the City hall to Independence hall and the confines of Independence square. Following the ceremony, the Radio program to broadcast the ringing of the bell will be conducted, commencing at 11:30 o'clock, eastern time.

At exactly midnight, Mrs. W. Freeland Kendrick, wife of the mayor, using a hammer muted with rubber padding, will begin to tap the bell. She will indicate the year 1926 with 1—9—2—6 taps properly spaced.

Bell Protected from Harm

All precautions against hazard will be taken. It has been determined that no danger to the Liberty Bell will result from its being rung again. Alexander E. Outerbridge, Jr., professor of metallurgy of Franklin institute, has assured that since the installation of the mechanical device technically known as a "spider," there is no longer any danger in tapping the bell in the manner contemplated.

Professor Outerbridge said, "Years ago I was requested to make an examination of both the old and new cracks in the bell and found there was actual danger of a large piece of the bell falling off, if it should be subjected to even moderate shocks or vibrations. Happily that risk was removed for all time by the clever device mainly devised by the late J. Sellar Bancroft, an eminent mechanical engineer of this city. It was due to this that the bell made the journey to San Francisco and return without any harm."

What stations will broadcast the ringing of the bell have not been announced, but it is probable that the WEAF chain and many other stations will handle the program.

Major Bowes to Have More Family Microphone Parties

NEW YORK.—Several weeks ago, Major Edward Bowes, "father" of the Capitol theater "family," broadcasting over WEAF, conceived the happy idea of introducing to the microphone various members of the "family" who operate behind the scenes of the world's largest theater, and have heretofore never been heard by the Radio audience. This innovation met with such great response that the Major has acceded to the many requests that have come in through the mail, and will have more "family" parties.

Radio Drama to Make Big Strides in 1926

TenEyck Clay as Horatius and Miss Rosaline Greene, his leading lady (above). Mr. Clay is director of WGY players.

"Mile High" Radio drama is broadcast from KOA, Denver, where Miss Iris Ruth Pavay (left) is director. "Come Out of the Kitchen," (top) scene from one of her productions with KOA players. Earle Emlay (below), one of the KGO players at Oakland, Calif., who appeared in "Merrily Merry Ann," under direction of Wilda Wilson Church.

FORWARD looking counsellors of the Radio world who keep a constant finger on the pulse of public appreciation predict there is to be pronounced development of the Radio drama during the year 1926. Players and producers are gradually evolving a technique by which illusions can be carried to the ear where vision is denied. There is growing up a new sect in the writing craft which employs more skillfully and deftly that latest handmaiden—psychology.

Mechanics and properties are being improved. Transmission operators are reaching out for new tricks in effects corresponding to the camera tricks of the motion picture photographer. Closeups and vignettes must find their correlative effects through regulation of the current in emphasis of sound. Articulation on the

part of the player must be refined to a hair's breadth of gradation. A sigh may be made more effective through the microphone than it ever can from a distant stage.

A mother's prayer may be whispered into the microphone so intimately and directly that the listener will have an experience never made possible from the visible stage. The hushed voices of the sweetheart and the lover can come from lips so close to the listener's ear that a charm can be produced totally unapproachable through any other medium.

All of these things are being worked out by very competent artists in all parts of the United States. Where the moving picture without sound tells character by "business" as when a surly man kicks an inoffensive dog and the tender-hearted hero binds the animal's injured paw with a handkerchief, the Radio churl snarls a vicious command, a thump and the simulated pained cries of the pup followed by the indignant protest of the hero coupled with soothing words to the dog, like "never mind old fellow, here's a nice soft handkerchief and I'll fix it up fine for you. Come, let's see the paw."

Wilda Wilson Church, who has done notable work at KGO, (the General Electric Pacific Coast station), finds that producing such masterpieces as Drinkwater's "Abraham Lincoln" or Shaw's "Your Never Can Tell," offers the most interesting experience in a lifetime devoted to dramatic production. Mrs. (Continued on page 10)

Miniature Radio musical comedies were made by the three thinkers below (left to right), George V. Hobart, Lieut. Gitz Rice and Joseph Knecht, "Goodrich Zippers." Scene (lower left) from WLIT Radio-play.

Roberta Hoyt, 10-year-old audio player at KGO, right, and Wilda Wilson Church (below) who is making Radio drama history at KGO, Oakland, Calif.

"Happiness Boys" Bring Cheer Over Chain

"You tell 'em, Mike," and so Mike does—he always does when these three get together, because they are the famous "Happiness Boys" of WEA and they go on the air every Friday night. Ernest Hare (left) and Billy Jones are the team. Mike is the one that's all mouth—he tells the world.

By Jack Forres.

SEVEN flights up in an office building, where the roar and bustle of Broadway is barely audible, there is a door with gold lettering on it, reading: "Billy Jones—Ernest Hare, The Happiness Boys."

Approaching the door, strains of "I would rather, very much rather, be alone in the South," greeted me. The song was a real southern blues song, which ended as I passed into the office.

Sitting at a desk were Ernie and Billy, dispensers of happiness and good cheer. The spirit of the song had not dampened their ardor, for the good-natured grin on both faces seemed to light up the room.

When informed that I wanted a story on their rise to stardom, each one referred me to the other. Finally, Ernie consented to talk about himself.

"Did you hear the song we were singing when you came in?" he asked.

"Yes," I admitted. "It was about the South, and sung with quite a lot of feeling."

"Well, I did mean it, for I was born in the South, down in Norfolk, Virginia. From the time I was knee high to a grasshopper, I was always singing. This resulted in my being called down at school.

"I received my education in a semi-military academy at Norfolk. Instead of shouting orders to my squad, I used to sing them. The commanding officers could not agree with me that this would make a hit with the boys, so our relationship became strained. The officers were very much relieved the day I graduated, for that stopped the singing of orders.

"A commercial traveler in those days was considered quite a person. Anyone could follow a military career, but to be a commercial traveler—well—that was the acme of perfection. My mind was made up, so I landed a job as one, and held on to it for five years.

"My customers kept telling me that I would make a better singer than I would a baking

"Bulging biceps make a strong larynx," says Happiness Billy; so here he is after a couple of rounds as a part of his workout with Light Heavyweight Champion Paul Berlenbach (left).

powder salesman. To find out if they were kidding me, I went to Baltimore and sang in a church choir for about a year. That settled it, I made up my mind to go on the stage. In 1905, some company picked on me, so I began to tour the country.

"New York greeted me in 1908. The show at the Winter Garden where I was playing, drew capacity houses. Whether it was due to me, or because of me, I don't know. The last show on Broadway that honored me by counting me in the cast was 'Sinbad.' I was understudy for Al Jolson, and was said to have played the part successfully.

"Recording for phonographs was in vogue at that time, so I signed a contract to sing for one of the recording companies. It was while singing for the records that I met Billy.

"Now, Billy," Ernie continued, "you tell him your side of it. I want to laugh."

And Billy Jones, the other half of the Happiness team, began to describe the high lights in his past career.

"Where was I born? Right here in little old New York. I am the rebel of the team. My musical career began when I was a kid, in one of the churches.

"I often heard that travel broadens one's mind, so I decided that I would visit the old folks in Wales. A good portion of my early life was spent herding sheep on a ranch in North Wales. I guess I have worked at practically every known trade or vocation in existence since that time.

"The first big show that I ever played in was Lew Fields' 'Midnight Sons.' After the finale on this show, I entered vaudeville. It was at this time I decided to try the heavy acting, so I became a member of a dramatic troupe playing 'The Necktie Party.' The war came along and broke up this wonderful meal ticket.

"After the war, I returned to vaudeville, doubling with Bert Grant in 'big-time.' When we arrived in New York after a successful trip on the road, I thought that I would like to try recording for the phonograph companies. For two years I sang under the name of Victor Roberts. It was there I met Ernie, as he told you before." (Continued on Page 10)

Six Continents Hear WOR at Newark, N. J.

Sometimes the boss himself relieves the announcer at WOR and below we see Mr. Louis Bamberger of the Bamberger Department store, Newark, N. J., taking a turn at the WOR microphone of the Bamberger store.

At the left is the transmission room of this famous Newark station and below is "Hollywood" McCosker who has brought many a cackle from dry throats by his "Broadway Bed Time Stories"—ever hear him?

SOME day Mr. Louis Bamberger may call the boys together at Radio Station WOR, located on the Bamberger store at Newark, N. J., and decide to adopt a new slogan.

It probably will be something like this:

"WOR—Heard Round the WORLD."

And there may be some justice to the claim. Records show that WOR has indeed been heard on six continents and as we go to press that is about all the continents that are doing any broadcasting since Gene McDonald and Donald B. McMillan have brought the Peary and the Bowdoin back from Baffin's Bay leaving the other undiscovered continent for next season's hunting expedition.

So adding them all together—North America, South America, Europe, Asia, Africa and Australia sending in their

applause cards—why not come right out with it and admit that WOR has been heard around the world?

Early in 1922, WOR went on the air with the original DeForest transmitter which was used by the noted inventor for his early experiments. In July, the same year, they installed one of the modern Western Electric broadcasting units.

WOR is owned by L. Bamberger and company, and as the slogan of the station goes: "One of America's Great Stores." In fact, it was the second department store in the country to enter Radio. The original impulse behind the Bamberger organization in entering the broadcasting field, was to offer an opportunity to aspiring young artists in the various arts to get before the microphone. Louis Bamberger prides himself in being a patron of the arts.

The original personnel of the station at the time of its inception was composed of three people. At the present time, fourteen are engaged in the handling of the station.

Joseph M. Barnett, or JMB, as he is better known on the air, is station director. He has been with the station since the beginning. His baritone voice has entertained thousands throughout the world. Surrounding his desk are photographs of various celebrities who have broadcast from WOR. It is said that nothing less than a "General" can hang in his collection.

The actuating standard for WOR's existence is to present better and greater programs, cognizant of the fact that there are more seats in the gallery than in the orchestra. This is the policy of Station WOR. Not such a bad goal, is it?

One of the greatest programs ever put on the air was through WOR. It was known as the Consul-General party, and was held December 31, 1924. Representatives of thirty-six nations gathered in the WOR studio, and extended their felicitations

to their countrymen both here and abroad.

The outstanding feature of the station is the educational angle that WOR presents. In each case they insist that the most noted exponents of the various branches of arts and science give their talks from an entertaining angle. This series ranges from Dr. Frank Vizetelly, lecturing on English, down to dancing lessons. In between are talks on home economics, political science and medicine. For the medical talks, only the outstanding members of the profession who are vouched for by the American Medical association, are permitted to give their views.

An act of Congress was passed thanking WOR for their cooperation in saving the Shenandoah, when it broke loose from its moorings early in January, 1924. The story is now history, but Secretary of the Navy Denby and Commander Kline made public a vow of debt the government owed the WOR microphone and those who were "standing by" during the trying hours of the night.

The WOR studio was also the

"Gannon will attend to it," they all say at WOR when any detail needs attention. They mean C. Feland Gannon (above). Joseph M. Barnett (right) is the conscientious director who brought WOR up from its infancy.

"One! Two! Three! Four!" J'ever get up in time to go through the dozens as they are broadcast from WOR? Well, this is the way it looks in the studio while you are doing the up and over (above). At right is a cozy corner in the WOR studio. Jack Poppele (extreme right) chief engineer.

scene of a national meeting. When people all over the country were attempting to gather funds for the preservation of the Thomas Jefferson home at Monticello, Va., instructions were given to the captains of the various teams over the United States regarding the progress of the fund.

The WOR chimes are a well known trade mark of the (Continued on page 10)

"Dream Daddy" at WLIT Has 22,000 Kiddies

"Rufus" Thomas Barker (left) and "Rastus" Forrest C. Dennis, the "dark clouds with a silver lining" at WLIT. Vaughn DeLeath (right), singer.

That's probably because of Harry E. Ehrhart, whose voice chuckles down out of the air into thousands of homes as the "Dream Daddy" of the Philadelphia Radio station WLIT. He is one of the original air saints of the many who have come into being to the great delight of children all over the world as the result of Radio. It's easier to believe in Santa Claus and witches and fairies and elves and all that because of the "Dream Daddys" and "Uncles" and "Big Brothers" who never are seen but who are real because the children can hear them.

But this is not alone a story about the kiddies of Philadelphia. It is about the very happy Radio sta-

Station WLIT started its career at about the same time with all other stations in Philadelphia, and has been operating full tilt ever since. Mr. Ehrhart was at one time Uncle WIP, of Station WIP, but when Lit Brothers constructed their station, he threw off the cloak of Uncle Wip, and put on one labeled "Dream Daddy." This was not all, however, as he was also made chief operator. When a change was made in the personnel about a year ago, Mr. Ehrhart became station director, which is a job in itself. And, oh yes, he is also known as announcer "H-double-E."

He built up the "Jack and

Let the Quaker fathers turn over in their graves for here is the latest edition of the syncopating age—Rollin's Juvenile Syncopators, Dream Daddy Ehrhart's boys at WLIT. What next? Babies rising out of their cradles to shake jazz rattles, maybe! Above, Pennsylvania Male Quartet; left to right—W. H. Carrint, J. S. Hinkle, Jr., Ernest T. Freas and C. D. Long.

The World's Greatest Radio Receiving Set!

New and Improved
**FRESHMAN
MASTERPIECE**

75

The Franklin Receiver
**With built in Loud Speaker of
Great Volume and Superb Tone**

Console Cabinet to Match

Ruggedly built, heavy, five-ply genuine mahogany, the design of the cabinet is identical to the pattern of the receiving set. The doors to the compartments open from the front, affording ample room for all batteries, battery chargers, eliminators and every accessory that could possibly be used in connection with a radio set. This useful and attractive console cabinet is priced at only Forty Dollars.

The Freshman Masterpiece five tube radio receiver is known all over the world as the "WONDER SET." Its ease of operation, its distance getting ability and mellow tone have spread happiness and education in hundreds of thousands of homes in every part of the globe.

People who could easily afford to spend three and four times the cost of a Masterpiece for a radio receiver, have signified, in no uncertain terms, their decided preference for one of these "WONDER SETS." To satisfy this insistent demand we were induced to encase them in cabinets of rare beauty—fine enough for the most exquisite home.

The Franklin Model, illustrated above, is the pride of the Freshman line. This receiving set, with built-in loud speaker, is encased in a heavy five-ply genuine mahogany cabinet. The front cover opens in desk-like fashion, a most convenient and attractive arrangement. As a result you have the **WORLD'S GREATEST RADIO RECEIVER**, with built-in loud speaker, in a charming piece of furniture all for only Seventy-Five Dollars.

*Sold on Convenient Terms by
Authorized Freshman Dealers,
Who Also Install and Service Them*

LEADING ORGANISTS LEND TALENTS TO GREAT AND POPULAR SERIES

NEWS BRIEFS FROM THE BROADCASTERS

RADIO TO MAKE POSSIBLE TALKING MOVIE AT BALL

Boston Symphony Gives WBZ New Feature—CKY and WQJ Talk to One Another

Adele F. Woodard, who is heard on the morning programs of WEAJ forecasting the coming motion pictures, announces that the Radio listeners will be interested in the novelty movie ball December 29, because a feature of the entertainment program will be a "talking movie." This will reproduce both the motion picture of the orchestra in action and the dance music which the orchestra played while being photographed. This wonderful invention is a relative of Radio because the sound is amplified by Radio devices and through loud speakers. Dr. Lee DeForest, the "Father of Radio," invented the process.

Two announcers, through the assistance of Radio listeners, have been sending personal messages back and forth. D. R. P. Coats, director of CKY, Canada, started it by broadcasting a message to Jerry Sullivan, WQJ, Chicago. Fans picked up the message and relayed it to Jerry, who then broadcast a reply. This two-way conversation has caused the two stations and announcers to have a very friendly feeling for one another. CKY now plans to dedicate Monday programs to Chicago.

S. L. Rothafel, known as "Roxy," who first organized his now famous "Gang" about three years ago when Radio first came into prominence, is broadcasting a regular program from the studio of WEAJ, New York city, every Wednesday evening beginning at 10 p. m., eastern time. In addition to WEAJ, New York; WTAG, Worcester; WJAR, Providence; WEEI, Boston; WCAP, Washington, and WWJ, Detroit, will broadcast this weekly program with the probable addition of more stations during the coming weeks.

The Boston Symphony contributes to the new musical organization known as the Hotel Vendome ensemble which made its Radio debut Christmas night as an exclusive WBZ feature. This new organization is composed of internationally famous musicians, and will be heard from the Springfield station Friday evenings from 8:30 to 9:30 p. m., eastern time.

Sekatory Hawkins is well known to thousands of young folks throughout the country to whom his adventures have been related through the medium of the newspapers. Now Sekatory Hawkins is appearing via Radio. He appears on the programs of WLW, the Crosley Radio corporation station at Cincinnati.

A program of instrumental music will again be broadcast from WEAJ by the "Cushman's Serenaders" on Thursday, beginning at 7:30 p. m. eastern time. The Cushman Serenaders orchestra, which has become very popular with WEAJ's audience during the last few weeks, consists of three mandolins, one cello, two violins and two guitars under the leadership of Hugo Marini.

United States Marine band concerts from stations WJZ and WRC have been changed to Tuesday evenings at 7:30 p. m. eastern time. This band has been missed from the Radio programs recently and

RADIO listeners in throughout the country have enthusiastically received and approved the "Great Artist" organ recitals broadcast each week by WAHG from the Skinner Organ company, New York studio, and the series is rapidly becoming one of the most popular features put on the air. Each Friday night from 8 to 9 p. m., eastern time, some nationally famous organist is heard on the program. The artists pictured above will conclude the present series, on which 36 of the leading organists of the United States and Canada have, or will have, entertained the Radio audience with their talents.

The dates of the remaining programs and the artists who will give the recitals are: December 28, Chandler Goldthwaite, who is shown at the left in the center

picture with Maurice Garabrant, who has played at more weddings than any other organist in New York and has also appeared on the series; January 1, Marshall Bidwell of Coe college, Cedar Rapids, Iowa; January 8, Dr. T. Tertius Noble, (upper left) of the St. Thomas church, New York; January 15, Dr. Gordon Balch Nevin, (upper right) of the First Lutheran church, Johnstown, Pennsylvania; January 22, Alfred Greenfield, (lower left) of the Fifth Church of Christ Scientist, New York; January 29, Rolfe Maitland, of Philadelphia; February 5, Lynnwood Farnum, (lower right) famous Canadian organist, February 12, William E. Zesch of Boston; February 19, John Priest of the Colony theater, New York; February 26, Harry Rogers Pratt of the University of Virginia.

FEWER STATIONS SEEMS SOLUTION

Congress May Be Asked to Reduce Number of Broadcasters to Aid Congestion

WASHINGTON.—Although the recommendations of the fourth national Radio conference provide for a limitation of stations, the only provision made to accomplish this end was to refuse licenses to new stations until the congestion has disappeared through stations dropping out.

It is the fear of officials here that the present congestion may not be materially removed by the conference action. There are at present entirely too many stations. Increased value is bound to be attached to a wave length after the recommendation limiting stations, and existing broadcasters are expected to hang on for dear life.

It is thought likely that congress may be asked to provide some method for decreasing the existing number of stations.

the reason is that the musical "Devil Dogs" have been "seeing the United States through a bass drum". By this it is meant that they have been touring the United States, playing concerts in all of the larger cities. Capt. Santelman is still the leader of this organization.

RADIO IS ADORED BY MARY GARDEN

Prima Donna Promises to Broadcast Her Voice as Often as Possible

CHICAGO.—Mary Garden is back in Chicago from Monte Carlo with a promise to entertain the Radio audience with her marvelous voice as often as possible this season. That Miss Garden has become an enthusiastic Radio fan is shown in an interview given on her arrival in the United States.

"I am Radio mad," she stated, "I adore it. I would no more think of traveling without a Radio than without my wardrobe.

"And do you know, I believe I have a good Radio voice? I am going before the microphone and sing as much as possible this season. I love it.

"You know, the Radio wasn't given us for dinky concerts. There are greater things in store for it. In fact, I believe we shall soon be able to tune in on Heaven, Mars and Venus, and those other places we think of."

Station Radio-Barcelona of Spain has signed a contract with the well-known Grand Theater du Lycee. For the sum of \$5,000 it has acquired the right to broadcast all operas, concerts or other performances given in the theater during the winter season 1925-26.

"RED-HEADED MUSIC MAKER" IN AMERICA

WENDELL HALL RETURNS FROM EUROPEAN TOUR

Telegraph Boys Have Work Again—"Rain" Song Proves Fad in Five Old Countries

NEW YORK.—The "Red-Headed Music Maker," Wendell Hall, has returned to the states from Europe, and once again his softly crooning ukulele songs have been heard by the Radio audience.

And he's more popular than ever before. Never in the history of Radio has an artist been missed so much and his absence so keenly felt by the Radio audience. Without the popularizer of "It Ain't A'Gonna Rain No More," Radio just didn't seem to be itself.

Wendell has been on a tour of Europe with his bride of a year, the girl the invisible audience heard him sing to so much, and later, the marriage of whom to their ukulele idol they heard broadcast to the world via the WEAJ chain.

The most-attended wedding in the annals of matrimony it was, and gifts poured in from the four corners of the country. Poured in? We should have said flooded in, for the listeners of the country liked Wendell and "his girl from Chicago," and they indicated their appreciation with gifts.

Entertaining Keeps Him Busy

Mr. and Mrs. Hall toured the country, went to Hawaii, toured the United States again—then the couple sailed for Europe. That was about three months ago. In Europe the newspaper correspondents say that Wendell's "weather prediction" song was earnestly learned by the Radio public of five different countries—in five distinct languages.

The overseas audience didn't want to let him leave, but their loss was America's gain. Anyway he belongs to us.

His first American appearance since his arrival was made over the WEAJ chain of stations on Tuesday, December 15, through the courtesy of the National Carbon company.

So Wendell is back and keeping the messenger boys busy again running to the studios at which he is appearing.

Want a Cute Lil Pup? Then Tune in Much DX

Reward for Record of Distance with One-Tube Receiver

CINCINNATI.—Six Radio enthusiasts will receive valuable pedigreed puppies from the best kennels in the country. These dogs are awarded for the best record of distance with a one tube Radio receiving set, either home or factory built. The contest started in September and will continue until March.

In addition to these dogs, Powel Crosley, Jr., who owns several hunting dogs, has donated \$1,000 as the reward to the Radio fan who proves he has received the greatest distance with a one tube receiver. Radio receiving sets have also been included in the list of prizes.

The judges have not completed their work in selecting the prize winner for September, as there were so many entries and each had to be thoroughly investigated. The puppy, a beautiful black with brown paws, is now in the Crosley kennels.

WOR "AROUND WORLD"

(Continued from page 6)

station. They are the original chimes used in broadcasting, and have been copied by a number of stations in one form or another for signing off and on.

It was the first station in the country to have a Radio wedding, and in the words of the celebrated "Hollywood" McCosker: "WOR played the part of everything but the bride." Houdini, who holds the long distance record for escaping and evading things, was arrested in the WOR studio. It was the only place in his experience from which he couldn't escape.

Among the celebrities who have faced the WOR mike are, Duke Boris, Lady Aberdeen, Dr. Adolph Lorenz, famous Viennese surgeon; Dr. Gustav Lindenthal, builder of the well-known Hell Gate bridge over the East river, New York; Charles H. Levermore, winner of the Bok \$50,000 peace prize, and numerous stage and screen stars.

One of the brilliant characters at WOR is Alfred J. "Hollywood" McCosker. He is in popular demand because of his "I See by the Papers" and his motion picture reviews. His past experience in the motion picture industry and newspaper field, makes him especially fitted to handle this phase of broadcasting.

Feland C. Gannon, assistant director, gives the fans a treat when he sings to them. His baritone voice is known to thousands of listeners throughout the world. Being one of the busy men at the station, his time is well taken up with numerous duties which prevent him from broadcasting daily.

J. Seabeck is the announcer. Listen to him some time and you are sure to come back for more. His clear enunciation and the tone of his voice are pleasing to the ear. It is seldom that Radio fans can listen to such a wonderful announcer. And when he sounds the chimes and you hear: "One of America's Great Stores," you know you are in for a treat.

RADIO DRAMA GAINING

(Continued from page 4)

Church graduated from the Boston School of Oratory years ago. She has taught English and dramatics at numerous leading colleges and schools throughout the country. She took an interest in the movies at one time, but found the work disappointing and is now convinced that the most interesting adventure in play producing lies in Radio.

"The conditions are different from any other work of this nature," she says. "There is, of course, no scenery, no setting of costume to create the necessary atmosphere, and everything has to be done by the voice alone, or by accessory sounds, such as the ringing of telephone bells or the slamming of a door. I try to use as few accessories as possible, getting the effects by speech alone.

"One advantage of Radio drama is that the parts can be read without being committed to memory. We usually need only three rehearsals. And, of course, there is no stage business to be learned, either.

"Our players find that previous experience on the stage is a great help, but not without its drawbacks. Those accustomed to depend to any extent upon facial expression, costume or action, are often at a loss when they find everything must be done by vocal inflection alone. For this reason, it is often possible to train beginners with no stage experience whatever so as to get excellent Radio results. But a trained dramatic intelligence is a great advantage.

"Another advantage is that parts can be doubled, the same player undertaking more than one role and differentiating between them by accent, pitch of voice, vocal inflection and so forth. This, of course, reduces the cost of production, but adds to the difficulty since the player must be careful to distinguish between the two parts so that each is identified with the same name and vocal characteristics throughout the play."

Much is yet to be accomplished by the coordination of music with words, according to Mrs. Church. As yet very little is really known about this phase of Radio drama. Recent experiments at KGO with educational drama, during which a boy and a girl and "The Old Man of the Rivers" drifted down the Volga river and talked about what they saw and heard, show clearly that music can be made an important part of the drama over the air.

Drama by sound alone is yet in its infancy and only a good beginning has been made, according to Mrs. Church, who sees it carried into educational fields with revolutionary results to methods now employed. Several educational dramas have been planned at KGO as a result of the "Volga River" playlet.

Many other stations have been making rapid strides in productions for the aerial stage. WGY at Schenectady, N. Y., is one of the pioneers in the eastern part of the country with its WGY players. Within the last few days they repeated their late musical comedy success, "The Hidden Idol." Their applause mail is said to have broken all records. The book was written by Witter Cook, a student at Massachusetts Institute of Technology. TenEyck Clay, who has been the director

for all the WGY productions, directed in this last success and took the part of the Rajah of Kookoostan.

In Philadelphia, Station WLIT produces Radio plays under the direction of Walter Greenough, assisted by Marlyn Brown and Isabelle Osserman. "The Green Goddess" was one of many successful Radio plays produced by the KOA players at Denver, Colo. In New York George V. Hobart, Lieut. Gitz Rice and Joseph Knecht collaborated recently for the production of the WEAf miniature musical comedies. In Chicago the Daily News station, WMAQ, successfully presented a number of Radio plays during the past year and the Evening Post WEBH Light Opera company presented many of the old-time light operas.

The Crosley superstation, WLW, has been making a thorough study of the Radario for its WLW players and has presented almost from the beginning some of the most successful Radio plays. This organization has been well in the foreground for the development of Radio play technique and out of its literary workshops are expected to come some of the most important developments for 1926.

WEAF HAPPINESS BOYS

(Continued from page 5)

After talking things over, both boys decided that there was enough room for another duet team, so they formed a partnership. This combination has been together for six years without even an argument.

The reason for this is due to the fact that Billy Jones goes out to Long Island and puts on the gloves with Paul Berlenbach, light-heavyweight boxing champion of the world. Two rounds with Paul takes all the fight out of him. Ernie is married—that speaks for itself. Even at that, he never has an argument with the wife.

The boys have made more records than any team in the business, and like Johnny Walker, they are "still going strong." Wherever they go, they are always known to radiate happiness.

Whenever they appear at a theater, the SRO (standing room only) sign is up at 7:30, proving how popular the boys are. While walking down the street in one of the large cities, a little boy came down the street with his mother.

"Oh, ma, look, th' circus is in town."
"Hush, child, that's only the Happiness Boys."

Their first broadcasting appearance was at WJZ when it was located in Newark. The studio was a corner of the factory draped off with curtains. Being one of the first to broadcast, they were asked to sing "plenty." They did!

After eighteen songs, the boys decided that they needed a rest, and informed the announcer, Tommy Cowan, of their desire. "Why don't you let the piano player give a few numbers," said Ernie. "But I don't know if it will reproduce," remarked Cowan.

"Well," came back Ernie, "there's no time like the present."

The piano player went on the air and "went big." The phone in the studio rang, and the voice at the other end of the wire complimented the station on the quality of the piano reproduction. This was in the days when a telegram from a town twenty miles away was quite a record. The boys entertained that night for about two hours.

A couple of years later they signed a contract to sing for the Happiness Candy company. Every Friday night from 8 to 8:30 they entertain thousands who are listening in on the WEAf link.

During a recent appearance at the opening of a store in Plainfield, N. J., their presence brought forth such a crowd of potential listeners that both front windows of the store were broken. To quell the eager mob, the police reserves of the town were called out. This proved the "smashing" popularity of the Happiness Boys.

They have appeared at all the large Radio shows in the East, and all they could possibly make in the West. It looks like a busy winter for the boys and, although they are not making a million, they do enough work to warrant it.

When I entered the door, the thought came to mind: "Why do they need an office?" After being with them for an hour, it was easily explained. The phone was ringing the greater part of the time, and visitors were going in and out. Song writers with new songs, the ice man, telegraph messengers and numerous others made up a steady stream.

People write in with original jokes asking the boys to give them the "air." They do, but not on Friday night. At the present time, the boys are favorites in the artists' popularity contest being conducted by a New York newspaper. The prize is a Packard car. Ernie owns a Chevrolet, Billy owns a Ford. They both expect to win the coveted prize.

Spain has granted 25 licenses for public broadcasting stations, of which no less than seven are in or near Madrid itself, but only eleven of the stations are actually working. Of these several are contemplating closing down, while all of them, with possibly two exceptions, are in financial difficulty.

Prest-O-Lite

There are many improvements in the new Prest-O-Lite Battery

IN THIS new battery you'll find all the good points and high quality that have made Prest-O-Lite an un-failing aid to better radio. And in addition there are many important refinements and improvements that make it the most attractive, most convenient battery you can buy.

This new battery has a beautiful stippled finish hard rubber case that blends with any furnishings. The case is molded in one piece, giving sturdy, leak-proof strength.

To make the battery convenient to carry, the handle has been given a comfortable rubber grip.

The oversize terminal nuts on the binding posts are easy to turn and insure perfect contacts.

Novel rubber insulators completely cover the tops and sides of the cell connectors, preserving the original fine finished appearance at all times and giving protection against accidental short circuits.

No effort has been spared to make this a battery you will be proud to own. Yet, like the rest of the Prest-O-Lite line, it is priced to offer you the biggest value of the day. Ask your dealer to show you this battery and the Prest-O-Lite Chart that helps you select the right battery for your set. Or write Indianapolis for a copy of our interesting handbook on radio storage batteries and how to charge them.

CANDY MAKING TOLD BY BETTY CROCKER

SUGAR AND WATER MAY BE MADE INTO DELICACIES

Popular Radio Cookery Expert Tells of Possibilities and Gives Recipes for Dishes

By BETTY CROCKER

Have you heard, and do you regularly listen for Betty Crocker's Radio talks? Miss Crocker is nationally known as a home food specialist who is broadcasting from a dozen of the country's largest stations. By special arrangement Radio Digest has secured a series of exclusive articles by Miss Crocker dealing with her current Radio talks. These broadcasts are made through WEEI, WEAJ, WCAE, WGR, WEAR, WWJ, WDAF, WHT, WFI, KSD, KFI and WCCO, the Gold Medal station at Minneapolis-St. Paul. All of Miss Crocker's recipes and discussions are based upon investigations and work of herself and her assistants in model kitchens. —Editor's Note.

EVERYBODY likes candy, and most of us like to make it. To the student of cookery there is no process more fascinating than sugar cookery. The results are nothing less than marvelous. We start out with plain sugar and water, put it over the fire in a sauce pan, and what is the result?—a soft, creamy fondant, a clear, fine spun sugar, a chewy butterscotch or caramel, sparkling crystal cups, or a brown, hard brittle.

The sugar chef goes even farther. He makes fascinating birds and flowers, and even statues and buildings—all out of the sugar and water. Although you may not be interested in the whys and wherefores of sugar cookery, it is interesting to realize the possibilities; and isn't it fun to make candy at holiday time?

Thermometer Is Necessary

Candy making is an exact science. The chef studies it for years before he can execute his wonderful creations. Candy must be cooked to exactly the right stage or else it is all wrong.

There is a definite stage at which it is exactly right, and it is very difficult to recognize that stage without a thermometer. Soft ball, hard ball, and thread tests enable you to get fair results, but the amount of sugar and fuel and time wasted on candy that was too hard or too soft would soon pay for a thermometer.

Chocolate Fudge

Fudge is one candy that seems to be a general favorite. Almost every girl can make fudge, and yet few of them can make soft, creamy, velvety fudge that literally melts in your mouth. Chocolate fudge made with this recipe is as different from the hard, grainy, sugary product as if it were another kind of candy. Here is the recipe:

Two cups sugar; 1½ squares chocolate (each square one ounce); 2/3 cup cream, milk or water; 2 tablespoons butter; ¼ teaspoonful salt; 1 teaspoonful vanilla.

Method: Add the sugar to the liquid. Add butter, grated chocolate and salt. Put over the fire and stir until sugar is dissolved. Cover until the boiling point is reached. Uncover and boil without stirring to 235 degrees Fahrenheit. (This is a very soft ball.) Add vanilla and cool to room temperature. Do not stir or agitate in any way until cool. Beat vigorously until the mixture sets when dropped from a teaspoon. Drop by spoonfuls on to a greased pan or waxed paper. If you prefer to have shaped pieces rather than dropped candy, knead the fudge in your hands until it is soft and creamy. Then mold in any shape desired or shape in a long roll and cut slices from the roll.

Peanut Brittle

If time is a factor, one of the most quickly prepared candies and yet one of the best is peanut brittle. No doubt you have made it many, many times before, but I have learned a few little tricks that may help you. This is the way we prepare peanut brittle in our model kitchen: 2 cups sugar; 1 cup shelled peanuts; ¼ teaspoonful salt.

Method: Place sugar in a smooth granite sauce pan or frying pan. Place over a slow fire and stir until melted. Scrape sugar from the sides of the pan and off the spoon. Have a warm buttered pan ready. As soon as the sugar is melted, add finely chopped peanuts which have been sprinkled with salt. Pour at once on to the warm pan. Square up the sides with two knives. Mark the candy into squares. If you want a peanut brittle that is not quite so hard to eat, you may add a tiny bit of soda with the peanuts. This will make the candy more foamy and not quite so brittle.

De Long Talks on Fashions

NEWARK, N. J.—Lucien DeLong, premier designer and stylist of France who is currently visiting in the United States, recently talked to the feminine members of the WOR Radio audience on "Present Day Fashions."

No important style conference is ever contemplated in Paris, the incubator of world fashions, without the presence of Lucien DeLong. His especially prepared style talk followed a tour of leading cities.

WAS MARK TWAIN'S SECRETARY

Miss Mary Louise Howden, who enjoyed the distinction of being secretary to Mark Twain at the time of his death in 1909, is shown above broadcasting some of her reminiscences over the WOR microphone on the last anniversary of the birthday of the famous humorist. The broadcast was made by direct wire from St. Mary's hospital, Orange, N. J., where Miss Howden, who has been confined to a wheel chair for the past seven years, gave the Radio audience interesting views into the life of Mark Twain.

WOMAN'S CLUB HAS RADIO MEMBERSHIP

CONSIDER ALL LISTENERS NON-RESIDENT MEMBERS

Schenectady Organization Is First of Its Kind to Broadcast Complete Program

SCHENECTADY, N. Y.—All women within hearing distance of WGY may consider themselves non-resident, non-dues-paying members of the Schenectady Woman's club, as this organization, the first of its kind to broadcast a comprehensive program, is offering weekly special talks, and musical entertainments each Tuesday during the winter months. Every department of the Schenectady Woman's club is giving at least one afternoon program, especially for the non-resident Radio membership and the whole is under the direction of the Radio committee of the club, of which Mrs. W. D. Bearce is chairman.

Large Variety of Subjects

The program is especially noteworthy for the variety of the subjects discussed and includes talks on club work, individual political responsibility, conservation, home hygiene, psychology in child discipline, home economics, philanthropy, parliamentary law and the national characteristics of the drama of today. The entertainments include a program of Scandinavian music, drama reading, two-piano recital, piano recital, violin recital and programs by the club chorus.

Offer Hygiene Course

A feature of the programs is a series of six lessons in home hygiene and the care of the sick by Miss Anna McGee, R. N., chairman of the public health committee of the club and a member of the Schenectady county chapter of the American Red Cross. These lessons are built up from "Red Cross classes in the home care of the sick" and are given with the consent of the American Red Cross for the first time by Radio. The information given by Miss McGee should enable the woman in the home to cope with sickness when no nurse is available. Questions written to Miss McGee on the subject of home hygiene will be answered by her.

WEAF HOSTESS IS ALSO ANNOUNCER

Miss Betty Lutz Becomes Popular After Being on Air But a Few Times

NEW YORK.—Already letters are being received by the correspondence department of WEAF making inquiry as to the identity of the new announcer for the morning programs broadcast from WEAF, notwithstanding the fact that she has been on the air for but a few times. This new announcer is none other than Miss "Betty" Lutz, the charming hostess of WEAF, whose grace and courtesy have characterized her presiding over the affairs of WEAF's reception room and have endeared her alike to the studio staff, the broadcasting artists and the many studio visitors. To say that she has gained thousands of friends during her two years' service as hostess would be but faint praise indeed. Her morning announcements through WEAF are predicated upon the thousands of comments concerning her admirable personality which indicates that such a quality has become too valuable to confine to the studio with its limited opportunity to become acquainted with WEAF's Radio audience.

Because her new duties as announcer will be confined to the morning hours, she will continue to act in her capacity as hostess, thus not transferring her from the position in which she has achieved such popular success.

Design of Radio Sets Influenced by Women

Cabinet Receivers in Demand to Harmonize with Home

CINCINNATI.—Women's influence on the design of Radio sets is more noticeable this season than ever before, say Radio authorities.

The tendency in the newer sets is to build cabinets large enough to contain the batteries and to create cabinet designs which harmonize with the home surroundings.

Radio builders say that the movement toward self-contained sets can be directly traced to the influence of women buyers.

Many men like to tinker with their sets and make minor changes in an experimental way, but their wives usually object to the disorder.

Photogravures of Your Favorite Artists

GALLERY OF RADIO STARS

Suitable for Framing or Placing in Your Album

BY SPECIAL arrangement, Radio Digest is able to offer our readers a great opportunity to secure fine photogravures of their favorite Radio stars at practically no cost. Radio fans will be able now, by this very special offer, to have pictures of their favorite artists and announcers before them when they listen in.

All that is necessary to secure photogravures from the Gallery of Radio Stars is to send the coupon published each week in Radio Digest, accompanied by ten cents to cover the cost of mailing and postage. Where a series of three photogravures are desired, it will only be necessary to send twenty-five cents and three consecutive numbered coupons clipped from Radio Digest.

WMCA, New York, N. Y. (340.6), 6-6:30 p. m., Olcott

High Lights of the Week

FANS WHO enjoy light opera music will tune, in for WIP, Philadelphia, Saturday night for the "Look-Out 1925 Revue" staged by Sigmond Romberg, the composer of "The Student Prince." Although the lovely costumes may not be seen, the music of this composer has a lyric quality which makes it very popular. WFI, also of Philadelphia, is scheduling a fine program for this evening with three headliners "A Veil of Old Lace," Polish Christmas carols, and a cantata, "Behold the King."

Handel's famous oratorio, "The Messiah," will find its way out over the ether from many stations this year. One group to sing this music will be the Messiah club of KLDS, Independence, Mo. The performance, which is an annual event, will be broadcast Sunday evening. The Sunday Symphonic society conducted by Josiah Zuro will give an unusually fine program Sunday afternoon at WJZ.

Ralph is a favorite name for announcers at KOA, Denver. The three, Ralph Crowder, Ralph Freese and Ralph Clark, will give a comedy skit Monday, taking off themselves. The lyric tenor tones of Adolpho Jimenez, a well-known Spanish singer, will float upon the ether this same evening from KPRC.

The long hair of many poets, if modern poets have long hair, will be hidden behind the microphone of WTIC, Hartford, Tuesday night when

the Hartford Poetry club takes to the air. At WBAL, Baltimore, this same evening, the Orpheus male quartet makes its Radio debut.

"Which Shall It Be—Serge or Satin?" the eternal feminine question asked by women, will be answered by Alma Fritchhoff Wednesday night in her fifth lecture on costume design. If you prefer something less serious in tone, tune in for the Jewett Jesters with the Merry Old Chief presiding.

For the first time in the history of broadcasting, the liberty bell which hangs in a glass-enclosed case in Independence hall, Philadelphia, will be put on the air through Station WIP, and perhaps other stations, to ring out the old year and ring in the new. Mrs. W. Freeland Kendrick, wife of the mayor of Philadelphia, will tap the bell with a specially constructed mallet. New Year's eve promises a fine birthday party at KTMS. This station is one year old. Among the other stations celebrating the ending of the old year with special programs are KHJ, with the passing Radio revue of 1925, and WAHG with special organ music.

New Radio sets may be enjoyed all day Friday by ambitious fans. The Victor hour of music begins at WJZ, WRC, WGY and WBZ. The Hoot Owls of KGW, the Morning Glory club of WLIT, and other stations with regular Friday features are planning gala programs.

Vail and his Hotel McAlpin string ensemble; 6:30-7, Robert Soffer, pianist; 7-7:05, Hugo Zeller, talk on lacquer; 7:05-8, the Amphions dance orchestra; 8-8:30, current events outline; 8:30-8:50, Xenia Wasson, soprano; 9:30-10, Cinderella dance orchestra; 10-10:30, Nichols trio; 10:30-11, Mario Alvarez, tenor; 11-12, Ernie Golden and his Hotel McAlpin orchestra; 12-1 a. m., Maxine Brown and her pals.

What a Listener Thinks

HUNDREDS of letters arrive on the editor's desk. Many readers write him. Now and then, however, one is striking. Such is one just received from "just a Radio nut," as he styles himself, living in Florence, South Carolina, on the eastern seaboard.

It pleases us to receive such letters. Read what he says. See what criticisms he has to make. Note what he has been able to do with a MERE single circuit regenerative set, coupled with a Thatcher non-radiating radio frequency unit, so that he won't annoy his neighbors.

His letter follows:

"Just a few lines from an old subscriber and 'Radio nut' as to the improved, also DX reception we are now getting, as compared with some years ago when we first started in the game. I compare results by receiving with my pioneer set, a single circuit regenerative, and all praise is due to the transmitting stations. Here's hoping we can finally eliminate the interference between stations. I have a superselective set that can cut out anything except the wave heterodynes, and they are painfully common of late.

"The 5,000-watt supers get through in great shape. Also the new Western Electric outfits, 1,000 to 2,500 watts, I believe, give wonderful results. I get California stations almost any night as soon as they come on, and do not have to wait for eastern stations to get off the air, as formerly. I can even tune in KFI some nights with WRC or WCAP roaring nearby. Of course general reception has to be fair for such results.

"My favorite set is the Thatcher radio frequency unit, described in your issues, coupled to my old single circuit regenerative. I have tried about all the new hook-ups and manufactured sets, but with a good aerial the above brings home the bacon well enough. Have been getting daylight reception (10 a. m. to 3 p. m. in bright sunshine), for the past sixty days, or since cool weather arrived.

"I enjoy distant sermons and football games, things I have never before been able to get successfully in daylight. I travel most of my time, or could perhaps give some better reception facts. The following stations come through plainly some days, as above, even for loud speaker reception, and better at night, accordingly:

• "KDKA, WLIB, WHT, WGY, WBZ, WSB, WSAI, WLW, WWJ and WEAJ.

"KDKA's morning setting-up exercise comes in with night time loudness, and more clear and free of static.

"I am sending a copy of this letter to the interested stations, with congratulations, and hopes for their long life and happiness, in exchange for the pleasure they render us.

"KFI, KNX and KGO are the reliable California stations, I find. Also the stations in Texas, Arkansas, Missouri, Nebraska, etc., come in far better since they have increased power.

"I was not much impressed with the 50,000-watt transmissions by WGY. I suppose I was expecting too much. I have not listened to WJZ with its new high power from Bound Brook, but am on the look out for it; WJZ has been impossible at its old location in New York city.

"I am sold on the short wave transmission by KDKA and WGY. It eliminates most of the static and fading trouble and comes in with fine volume and clearness. "The paid advertising programs seem to be getting better, and we are strong for them, as long as they keep the high standard of quality up."

The writer of the above letter has covered much ground. What is important, he has discussed the subjects from the standpoint of the average broadcast listener. We are glad to reprint what he has written for the benefit of other readers and the broadcasters, mentioned or not.

Radio transmission is improving; 50,000 watts hasn't proven itself worth while yet; a single circuit set with a Thatcher unit brings "home the bacon"; interference between stations is still very bothersome; paid advertising programs are getting better.

Do we all agree with him?

RADIO INDI-GEST

The Lost Station

(With ordinary apologies.)

Seated one day at the Radio
I was weary and ill at ease,
And my fingers wandered listlessly
Over the dial of the coupler keys.

I knew not what I was getting
From that thing with ethereal wings,
But I struck one station astounding—
Oh! What sadness and heartaches it brings.

It came in with perfect reception,
Like it was only a mile away
Then I felt like one feels with a million
As I sat there that gloomy old day.

For five or ten minutes I listened,
Then from the skies—what a blow
The announcer was speaking—
My God! What's that? Lon-Don-Two-eL-O!

Curses it then faded away like a dream
Sadness and gloom filled the air.
Oh! How I have tried to re-get them
And I know they're there and not there.

Some day I shall locate that lost station!
When I do it shall be mine to keep.
For I've a dictaphone placed by my set
And I'll get 'em regardless of sleep.

H. L. D.

Maybe that was during the football season and what you heard was, "one down, two tuh gc." Have conferred with Dielectric and he suggests that if you and your dictaphone don't get 2LO, enlist Scotland Yard.

Trying for 1,000 Islands?

Dear Indi: I just read in your magazine that Mrs. Flossie Erickson of Bloomington, Ill., has logged 240 stations. I believe I have had more than that all at the same time, just now, while trying to tune in a station, and no kidding about it. E. C. L.

Which goes to prove there is no place like home.

Chicago Undertaker Finds Broadcasting Helps His Business

—From WBCN News Notes.

You should be dying to hear him, he is evidently perfectly killing.

Eskimos Are Fortunate

"Explorer MacMillan gave the Eskimos at Etah a chance to talk into the microphone, while others listened in. And the marvel of it is they enjoyed it, though the Eskimos are limited, according to all accounts, to 40 words in their language. If they can make themselves understood with 40 words, why not tie some of our highbrow after-dinner speakers down to that limit?"

—Thoughts of an Eavesdropper,
in Columbus, Ohio, Dispatch.

A good suggestion from the "Eavesdropper" and right now we will cast the first vote to make Eskimo-ese the international Radio language, providing announcers are not allowed to use the same word twice.

Getting Ahead

Dear Indi: Dr. Galdston in a Tower Health talk on headaches over WEAJ expressed, "A headache indicates that the human engine has become overheated." Do you think this is caused by running around too much? DEE TEE.

Yes, Dee Tee, that could cause it if you stepped on it and traveled at too fast a clip, and undoubtedly does cause it if you put alcohol in your radiator.

In for the Night

I've heard of people raving
Of stations they can hear—
KFI and KNX,
From 'cross the pond and near.

These things they do not thrill me,
Not even 2LO,
Or hear a band from a far-off land
Or a shrieking soprano.

No, 'Im not an ether traveler
When by my set I sit
When I get my favorite station,
I stay until they quit.

That Red Head Gal, Bobette.

Dear Bobette: The greatest thing in the world is a constant and enduring love, but as you live in Chicago, we would warn you against any affinity toward KYW. They have a 24-hour program and even the milkman couldn't save you.

Vive la Suffrage

Dear Indi: Recently one of the leading men's tailors of Los Angeles announced the winner of a contest that had been held over the air. The announcer, opening the winning letter, told that "Miss _____ had won the contest and would receive an order for \$25 pair of pants." P. W. B., Los Angeles.

At that, \$25 don't go a very long way these days.

News of the Week

Condensed BY DIELECTRIC

It may have been difficult for some in the Radio audience listening to WNAC, Boston, as that station broadcast the play, "The Miracle," from the Boston opera house, to follow the action and imagine the stage effects, yet to all came the strains of music as vividly illustrative of the plot as any Wagnerian motifs. Undoubtedly the grandeur of a work of this kind is lost to unseeing auditors but so much of it is obtainable that we are very much indebted to Mr. Gest and the Shepard Stores for again broadcasting this masterpiece. The description of the development of the play was helpful and lucidly given while the music composed for the work was exquisitely played.

Station WSAI, Cincinnati, is utilized for presenting a community plan of broadcasting entertainment by first-class artists which apparently has interested listeners in all parts of the country. On one of the evenings devoted to this feature I found myself rubbing dials with governors of many states as well as other notables who made up the cosmopolitan audience enjoying a program given by the Cincinnati symphony orchestra. This series constitutes another link in the growing chain of unusual performances to which all broadcast listeners are invited.

Many of the colleges are broadcasting material of great practical value to countless men and women deprived otherwise of special knowledge. The lighter side of university life and its fraternal spirit was exemplified in the broadcasting by WLIB, Chicago, of the Northwestern university banquet of alumni. Speeches and songs were bolstered up with yells and general jollity impressing listeners with the comradery of fellow students. It may be said that these features have too much of local interest, but I venture to say there are few of us listeners who do not enjoy their enthusiasm.

Very pleasing, indeed, was the concert broadcast by Station WPG, "The World's Playground," Atlantic City, presented in the high school auditorium of that Atlantic coast resort, enabling listeners to hear a selection of popular instrumental numbers rendered by harp, cello, violin and flute artists. Especially pleasing was an effective arrangement of "The Rosary" played by these artists. Distant auditors must have been as willing to applaud as those seated in the auditorium and it is hoped they did so in the only manner possible—writing their applause.

Kathryn Meisle, who sang in the Atwater Kent hour from WEAJ, New York, displayed a quality of contralto none too prevalent among concert singers and for that reason, if no other, she should be heard by Radio listeners again. Comparable to famous contraltos of past operatic history in the peculiar timbre of her vocalizing, we should be proud with her of such attainment with exclusive American tutelage. Allen McQuhae endeared himself by singing Irish songs in true Erin style. These two artists added much to the series.

A good program of dance numbers is never unwelcome but a surfeit of jazz comes with greater or less alacrity, depending upon the listener. I have found few dance programs more completely satisfying throughout than one from the studio of KOA, Denver, recently offered. "I'm Smiling Through My Tears" was one of the numbers played with grace and tonal beauty though every number had its own appeal. We'll travel there again.

Installation and Care of the Christmas Set

Part I—Antenna and Ground Suggestions

By John G. Ryan

THE MAN who is presented with a new receiving set, and who has not previously installed or operated one is very apt to be somewhat bewildered by the number of controls and the accessories which must be connected to the receiver, and taken care of. While the manufacturer has probably furnished a book of operating instructions, the matter of installing an aerial and ground will be somewhat confusing.

Practically all of the receivers which will be given this year are of the 5-tube type known as tuned radio frequency, or the larger type known as super-hetero-

Figure 1—Should ground clamp be not readily accessible, connection can temporarily be made this way.

dyne. The first of these two types requires an outside wire from 40 to 100 feet long, including the wire which comes down to the receiver itself. In localities where there are a great number of broadcasting stations, such as Chicago, New York or Los Angeles, the shorter antenna will give much more satisfactory results because of the increased selectivity or ability to separate stations, which the shorter aerial provides. The antenna proper is usually strung between two chimneys, in the case of the user living in an apartment house, while the Radio set owner who lives in the usual two-story house finds it more convenient to string the aerial between his roof and that of a neighbor. The best height for an antenna is 30 to 40 feet above the ground, as experiments have shown that at this height much less static is picked up.

The type of wire used for an antenna is not extremely important, except that it be made of copper, and it may be cotton covered, bare or coated with enamel.

The Belden company has a very excellent wire for this purpose, covered with a heavy layer of enamel which is available all over the country, and the new Radio set owner will not go wrong if this wire is used.

Insulators Are Important

It is important that a small insulator be inserted at each end of the wire, between the wire actually used and that which is put in for the purpose of separating it from the chimney. The lead-in may very well be a continuation of the actual antenna itself or it may be a rubber covered wire soldered to the antenna, between the insulators and close to one of them. This lead-in wire should be kept clear of the building where it comes down from the antenna by means of more insulators and these insulators can be of porcelain, glass, or bakelite. Where the lead-in wire is brought in through the house, it should preferably be brought through a porcelain tube which can be had from any electrical or Radio supply store.

The ground connection is usually made to a cold water pipe, by scraping the corrosion and dirt from the pipe for a length of about two inches, and fastening a ground clamp (costing about 20c) on the pipe at this point. A wire is then connected to the ground clamp and carried to the receiver for connection to the binding post inserted for that purpose. In the case of the country resident it may be necessary to drive a long rod into the ground to a depth of four to six feet and fasten the ground wire to it either with a clamp or a machine screw inserted into the pipe by means of a drilled and tapped hole. The ground wire should be run as direct as possible so that it will not be too long, and it should, preferably, be insulated.

Super-Het Uses Loop

The owner of a super-heterodyne does not have this antenna problem as this type of set will function on a small framework of wire known as a loop aerial. It is not advisable to try to con-

struct a loop as one can be purchased at a very low cost and will look better and operate better than anything which the home builder might put together.

The Radiola super-heterodyne requires a special loop aerial and several concerns are now making a loop of this capacity.

Figure 2—The hydrometer and its use are shown here. Reading should be taken with hydrometer held vertically.

The Radio Corporation of America manufactures such a loop, of course, and this special size is also available under the name of Bodine and as the Aero loop. Other super-heterodyne sets usually take the standard loop such as is used on re-

flex receivers and many types of tuned radio frequency outfits.

Batteries Necessary

All Radio receivers require what is known as an A battery, and also a set of B batteries; most of them also need a small unit known as a C battery. The A battery may be either a storage battery such as we usually find on automobiles, or it may be 3 dry cells such as are used on doorbells. The type of A battery necessary is determined by the type of vacuum tubes used. If the manufacturer's instructions state that the tubes are to be of the 201-A type, a storage battery giving six volts is needed. If the tubes are of the 199 class, they can be lighted from three dry cells such as the Columbia Ignitor, or the Eveready Special Radio A cell. Practically the only receiver now on the market which does not use one or the other of the above mentioned tubes, functions from dry cells but the cells are not connected in the same way that they would be to light the filaments of the 199's.

B batteries are the same for any type of receiver but they come in various sizes which determines the length of life, but not the voltage. It is good economy to purchase a large size B battery as the larger sizes have a length of life far greater than their proportionate cost to the smaller batteries. The Eveready number 486 is recommended for any installation and if the receiver is a single tube affair, it will require but one of these units, while, if it contains from 2 to 8 tubes, two or three of these units will be necessary. B batteries are also made in storage cell types and while these are rather expensive as to initial cost, they are probably somewhat cheaper over a long period of time. They can be readily recharged at low cost about once

(Continued on page 24)

A CHRISTMAS SUGGESTION

Fultone

Trade Mark

THE FORD of LOUD SPEAKERS
\$6.50

Fultone Loud Speaker has conclusively proven to the radio world that a reproducer could be made and sold at \$6.50 which would handle music or speech in volume as perfectly as any speaker at any price. The horn is solid, non-ringing and wide-throated enough to handle the powerful reproduction from super-heterodyne or reflex. The adjustable diaphragm permits matching Fultone to any receiver and "B" battery voltage.

Either speaker or unit will be shipped on a satisfaction or money back basis on receipt of price in money order or currency. The coupon is provided for your convenience in ordering if your dealer cannot supply you.

4 Big Improvements in Amplification!

- 1 Full amplification of those bass notes hitherto largely "lost".
- 2 Greater clarity on all notes.
- 3 Improved reception of distant programs.
- 4 Better volume control.

A Thordarson Autoformer Amplifier built in accordance with instructions and diagrams furnished with each instrument.

fans!

Send for our new interesting bulletins on Autoformer amplification. They contain hook-ups and complete directions.

No note is too low—no note is too high—to be fully amplified by Thordarson Autoformers. Autoformers are all frequency amplifiers—they amplify with even magnitude ALL notes within range of the human ear. Developed, perfected and built only by Thordarson.

THIS latest Thordarson development—the Autoformer—utilizes for the benefit of your radio set, the same principle used in the line amplifiers adopted by the more recent high-powered broadcasting stations. The excellent tone quality of these stations—due to perfect amplification—offers proof of Autoformer effectiveness.

Autoformer amplification is for those who seek the finest reproduction of programs to be had. May be used with any set in place of regular audio transformer hook-up. Full directions, with diagrams, supplied with each instrument. Autoformers are \$5 each.

"WLIT 'DREAM DADDY' "

(Continued from page 7)

was born in Chicago, enlisted at the Great Lakes station, and was shipped east. On his way back from Europe he stopped off at Philadelphia, landed a job with Station WIP, and has been in the Quaker City ever since.

Of course, there is a program director, and those who have listened to the excellent classical programs broadcast by WLIT can thank Mrs. B. F. Maschal, who is very well known in musical circles throughout the country. She is an executive of the Matinee Musical club, the largest club of its kind in the country; a member of the board of the Philadelphia Civic Opera company, and a national board member for eastern Pennsylvania of the National Federation of Music clubs. Her acquaintanceship with many noted musicians, has enabled this station to broadcast musical features of high quality.

When "Dream Daddy" became station director, the destinies of operation fell on the shoulders of James Nassau, known as announcer "J.A.N.," and a brother of Joseph Nassau, of Station WOO. "Jimmy" is a dyed-in-the-wool Radio fan, and like the motorman who takes a trolley ride on his day off, he works his low-wave set, and tries to "raise" some fan in far-off Chile or Peru, when he is not on duty at the station. Horace Shivers is next in charge of the operating room, and to say he is capable is putting it mildly.

Allyn C. Saurer is the "remote control" man of the station, and it is his voice you hear when the Arcadia concert orchestra broadcasts a concert every day. Besides, he broadcasts a dramatic review every Tuesday evening and conducts the "Morning Glory" concerts every Friday evening. These concerts are epics to those who love the popular type of program, and after each concert comes hundreds of letters from all over the country.

Probably the most stable feature of WLIT is the "Stanley Hour of Music," broadcast every Monday evening. It is done direct from the stage of the magnificent Stanley theater in Philadelphia. It usually consists of selections by the symphony orchestra, largely composed of members of the Philadelphia orchestra, and selections by a nationally famous dance orchestra, or songs by some well-known vocalist. Another exceptional and popular feature is Rufus and Rastus, a team of "Dark Clouds with a Silver Lining," who dispense good cheer every time they go on the air, and who have, by the

way, a repertoire of one thousand songs. They also form half of the Fireside quartet, a regular feature.

The latest control of WLIT is Wither- spoon Hall, where some of excellent musical concerts are given. Always having in mind the listener in, only those concerts that are considered the proper material for the average fan are chosen by Mrs. Maschal, who, as we have said before, has a keen sense of judgment in matters musical.

The station broadcasts on 394.5 meters, and uses both storage batteries and generator for its power. The aerial towers are 400 feet above street level.

YOUR CHRISTMAS SET

(Continued from page 23)

every three weeks, and with a little care should last for several years. Excellent storage B batteries are made by Prest-O-Lite, Willard, World and Philco.

Care of Batteries

The above mentioned batteries are all of the sulphuric acid type, but storage B units are also made using alkali solution instead of acid. Probably, the best of these is put out under the name of Hawley, by a concern in Danbury, Connecticut. These alkali batteries cannot be injured electrically, and do not require quite the careful attention that the acid type of storage B must have.

There is only one method of testing the storage A battery, which, while it is rather mussy, must be done at frequent intervals if the battery is to function properly and enable your receiver to give satisfactory results. A device called a

Hydrometer can be obtained at Radio and automobile supply stores and consists of an outer glass tube, an inner glass float and a rubber bulb. The small tip on the end of the outer glass tube is inserted through one of the holes in the top of the battery, sufficiently so that it is below the level of the liquid within. The rubber bulb is then squeezed and released, which will draw liquid up into the outer glass tube. The small glass float will then rise to the surface of the liquid in the hydrometer and the condition of the battery is determined by the number on the side of the float which is at the level of the liquid.

There is a scale in the float reading from 1100 to 1400, and if the surface of the liquid is between 1100 and 1150 the battery is pretty well discharged, while if it reads between 1250 and 1300 the battery is charged and ready for use. When the reading has been taken, the liquid is then squirted back into the cell from which it was taken. The only care necessary for this battery is that distilled water be added to the cells to keep the level just above the top of the plates. This can be observed by looking down through the hole in the top of one of the cells and the distilled water can readily be added with the hydrometer. Nothing else should ever be added as the acid does not evaporate.

The vacuum tubes of any type should be handled very carefully as the interior construction is very delicate and a severe jar would bend them out of their allotted places, and, while the glass may not be broken, the efficiency of the tube would be seriously impaired. You will note

when unpacking them that the tubes are carefully wrapped in corrugated board and a soft cottony material. In the majority of receivers of from 5 to 8 tubes, the tubes are all of the same type, but there are a few sets now on the market which require a special tube in the third socket such as the UV-200 or a special tube in the last socket such as the new UX-112. The writer made a mistake recently and tried to operate a receiver with a UX-120 in the wrong socket, and searched for an hour to find the cause of the distortion. The power tube used in the last socket is to be the UX-112 if the rest of the tubes are of the 201-A type, and should be the UX-120 if the rest of the tubes are of the 199 class. There is no power tube for use with WD-11 tubes.

So much for accessories, and in the next issue we will take up the connections to the receiver of the accessories, and will discuss loud speakers.

By running a wire from the receiving set to head phones in another room, it is possible for persons some distance from the set to enjoy concerts. When confined to bed by illness or permanent injury, this is an excellent means of bringing entertainment to their bedside.

Conversational French is being taught through Station WGY in a course of lessons which began recently. The instructor will be Leon A. Huguemont, a native of Aix-les-Bains, Savoy, France, and now an electrical engineer in the employ of the General Electric company.

Powerful Rich Tones

ARE to be expected when Meloformers are installed in the audio circuit of any set.

The straight "8" super, built and fully described in this issue by Christen & Fournier verifies, to the fullest extent, the findings of radio engineers everywhere.

Install them in your set—whether it be a Super or not—and note what clear, rich tones the Meloformer produces.

The New Radio Book HOW TO

Operate Sets Construct Parts Improve Reception Understand Radio Assemble Circuits

FREE With One Year's Subscription to Radio Digest

THE greatest assemblage of facts and hints, from actual everyday practice, ever gotten together. Edited by the technical staff of Radio Digest it supplies the demand for a book covering every phase of Radio from a simple explanation of Radio reception to a technical explanation of the different parts of a set which leads to the best reception possible. The sections on selecting and making sets develops the different types of sets and circuits with blue-prints and diagrams to explain same. "How to Operate" gives detailed information on the operation of all the well-known sets. The section of general information contains a complete Radio map and schedule and a section of workshop kinks which save time and money. Now is the time to take advantage of the exceptional offer as listed in the coupon for your convenience.

RADIO DIGEST, 510 N. Dearborn St., Chicago, Ill. 12-26-25

Straight-8: Outside Aerial Tuned R.F. Super

Part II—Panel Drilling and Assembling

By A. Christen and Jacques Fournier

IN THE first article of this series, the writer discussed the various parts used and the reason for their choice. Presuming that we now have all these parts available, or on the way, we can take up the layout of the front panel and that of the sub base, and the mounting of the apparatus on these panels.

Regular readers of Radio Digest have probably noticed by this time that it is the practice of this paper to always have a bakelite sub base mounted on brackets in preference to a wooden base board secured to the panel with wood screws. There is no questioning the superiority of bakelite for this purpose since wood absorbs moisture which will cause leakage if any live parts happen to be in contact with it. The use of a bakelite sub base also has the advantage that parts can be mounted beneath it where they should be in close proximity to certain other units but there is not sufficient space on the upper surface. Then too, much of the wiring can be put below the sub base, which materially improves the appearance of the inside of the receiver and frequently also is an aid to efficiency. In this case, this practice enables us to mount the coupling transformer between the first and second tubes, close to their sockets, yet not in such a position that it is likely to feed back into the transformer used to couple the antenna to the receiver. It also permits us to mount the second audio transformer close to the last two sockets yet not crowd the upper surface of the sub base.

Full Size Templates Available

The reader can either make his own templates, following the dimensions given in figures 5, 6, and 7, or can write in to Department 5, Radio Digest, 510 N. Dearborn St., Chicago, and secure full size drilling templates for 25c. These templates are available for all receivers presented by the Digest, as there are many readers who feel competent to construct their own receivers but are not so sure of their ability as draftsmen.

Considering now figure 5, which is the layout for the front panel, the 30-ohm rheostat is placed in the first hole to the left about mid-way the height of the panel. The next hole on this line is to be drilled $\frac{1}{2}$ inch in diameter for the mounting of one of the Karas condensers. In this case, we have chosen to mount it by means of the single hole mounting feature instead of the three hole mounting arrangement. Near the top edge, and in the center of the panel lengthwise, there is a $\frac{1}{8}$ -inch hole for a four spring jack. The other $\frac{1}{2}$ -inch hole is for the second Karas condenser and the hole at the right end is for another 30-ohm rheostat. In the lower left corner of the front panel, there are two holes each $\frac{1}{8}$ inch in diameter, and the single

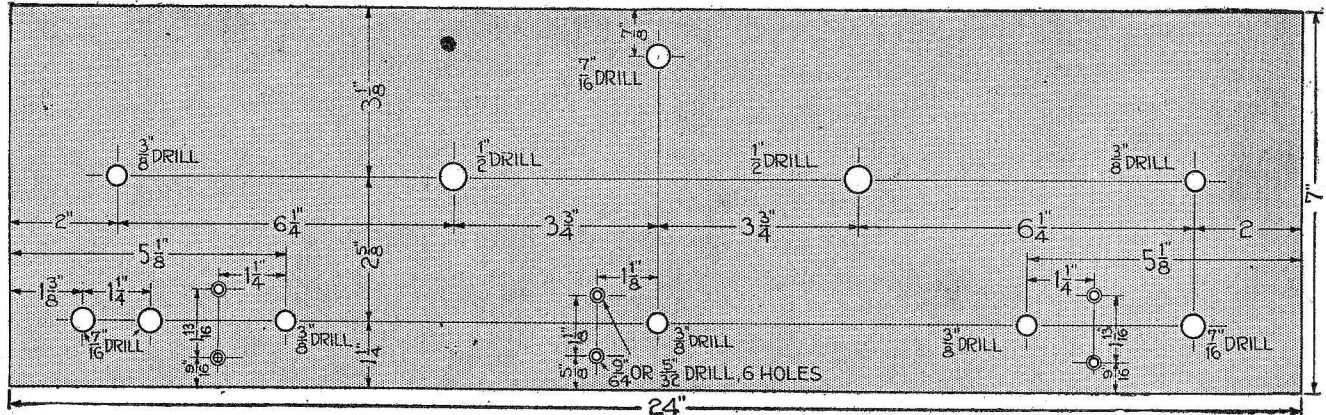

Figure 5

spring open circuit jack goes in the first hole to the left, while the second four spring jack, Carter number 104, goes in the other hole. A little to the right, and close to the bottom edge is a $\frac{3}{8}$ -inch hole for one of the 400-ohm potentiometers. A little further to the right the $\frac{3}{8}$ -inch hole is for the 10-ohm rheostat and further yet to the right we place the second 400-ohm potentiometer. The last hole to the right on this lower line is for the Cutler-Hammer switch which is to be mounted horizontally.

Assembling Front Panel

Since all of the instruments on the front panel are assembled with the single hole mounting feature, placing them on the panel is comparatively easy. The two pairs of holes just inside the potentiometer holes are, of course, for the Benjamin brackets, while the pair of holes to the left of the 10-ohm rheostat are for mounting two of the coils. The 25-turn coil is mounted on the upper hole, while

the double coil consisting of 25 turns and 45 turns is mounted on the lower hole so that it will be about $\frac{1}{4}$ inch from the former.

Figure 6 shows the layout for the sub base as to the apparatus mounting holes and, while the reader can possibly place the various instruments correctly from a study of figures 8 and 9, some suggestions will probably help. The tube sockets have been numbered in the illustrations in the order in which the signals pass through them, and will be referred

to in these articles by the numbers. Sockets 7 and 8 are at the left edge of the sub base and are mounted with the P and G terminals toward the front of the receiver. Sockets 2, 3, 4, and 5 are mounted along the rear edge toward the right and are to be placed with their P and G terminals toward the left. Socket 6 is in the front right corner to the right of the second Karas condenser and is placed with the P and G terminals toward the front. Socket 1 is that in the middle between (Continued on page 26)

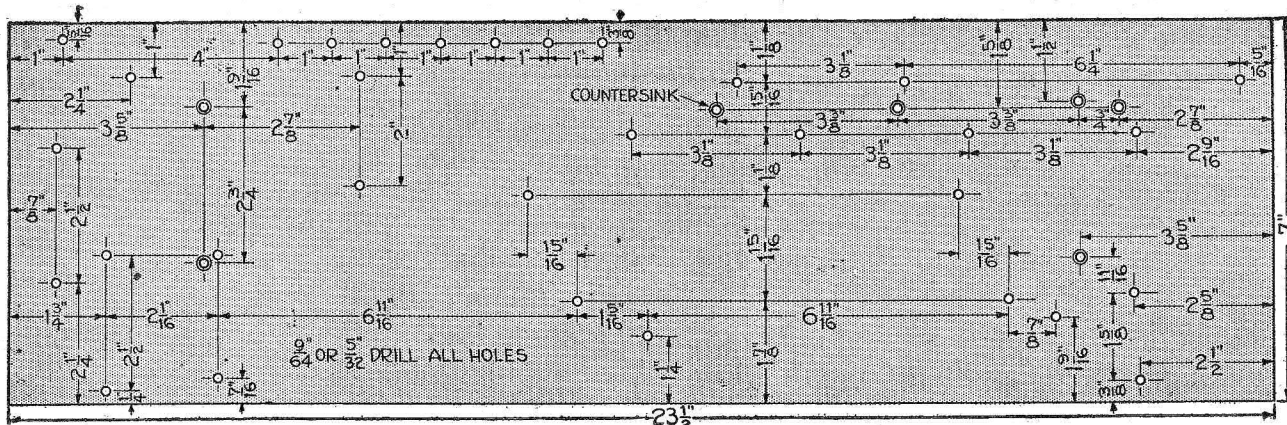

Figure 6

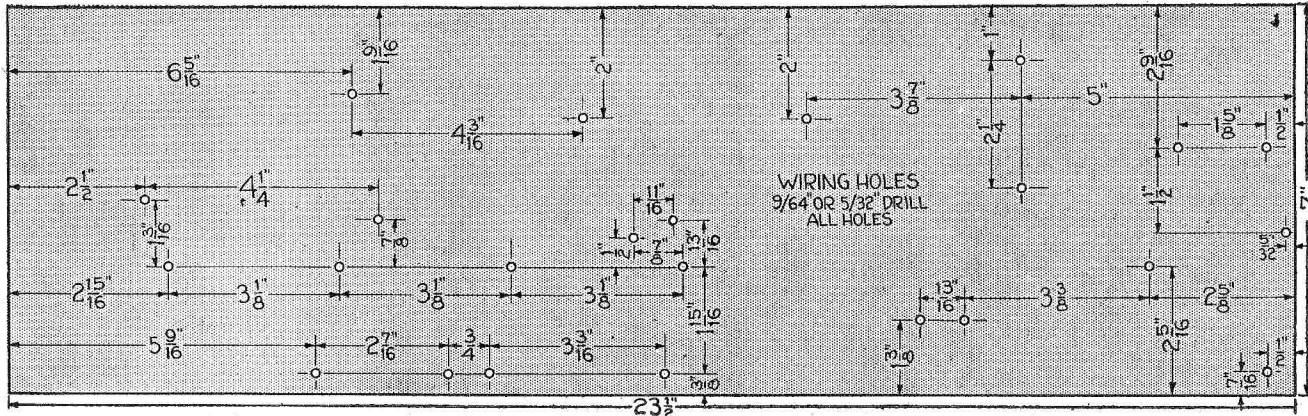

Figure 7

STRAIGHT-8 SUPER-HET

(Continued from page 25)

the two condensers and P and G are to the rear.

As the Victoreen intermediate transformers come to you, the small brass mounting brackets are bent at right angles. These will have to be bent down against the transformer so that they can be mounted beneath the sub base at a sharp angle as shown in figures 8 and 9. The writer found it a good idea to remove the small brass machine screw which secures the bracket at the edge of the coil. This will leave more room for the mounting nut which is placed on the machine screw that secures the transformer to the sub base. The 1/2-mfd. condenser is secured on the underside of the sub base by means of one of the mounting screws that hold socket 6. If the nut on this screw is turned up tightly, it will also hold the

condenser just as well as it could be done with two or three screws.

The mounting of the Amperites is perfectly clear from the photographs, and there is only one hole for a machine screw. This hole, as provided by the Radiall company, will not pass a 6-32 machine screw, and it will be necessary to ream or drill out the hole on each a little bit. A hole must be drilled in the lower strip of the left bracket for the mounting of one of the Meloformers and this hole is to be 4 1/8 inches back from the front surface of the flange by which this bracket is secured to the front panel. The coils should be mounted last as they are comparatively delicate and might be injured. When the other parts have been assembled, and when you come to them, the small 10-turn coil goes to the rear and the 52-turn coil is placed 1 1/2 inches in front of it. Their mounting arrangement and position can be clearly seen in the photographs.

The holes through which wiring must pass from the upper surface of the sub base to those parts mounted below, are shown in figure 7, and a separate template is provided for them so that there will be no confusion either in laying out the holes or drilling them. The reader can combine figures 6 and 7 into one template, but it will be better to make figure 6, punch the center marks and then drill these holes, and then duplicate this performance with figure 7. The 7 binding posts are placed in the seven holes directly behind the 10-turn antenna coil and in the following order. The antenna post is the first at the left and the ground post comes next. The third hole is for the plus A binding post, the fourth is for the negative A. The last three holes are for the negative B, the plus 45 B, and the plus 90 B, in that order.

(The wiring of "Straight-8" will be thoroughly explained in next week's issue. —Editor's Note.)

KARAS
Orthometric
Condensers

— the Condenser that inaugurated

Straight Frequency
Line Tuning

When we sprung the Karas Orthometric Condenser on a restless, hungry radio public—we knew we had started something. But we scarcely expected to be snowed under with such a literal avalanche of orders.

We inaugurated Straight Frequency Line Tuning at the psychological moment. Radio Fandom was waiting hungrily for something new. And here was something—not only new—but so perfectly simple—so thoroughly scientific—so downright sensible, that everyone wanted KARAS Orthometric Condensers at once.

Our scheduled production was like a drop in the bucket. Buyers pleaded—cajoled—even threatened. Our plans were doubled, trebled, quadrupled. But it all took time.

KARAS Orthometric Condensers could not be thrown together. It took months to train gangs to build them with the absolute precision KARAS demands. So tens of thousands had to wait or buy other makes, hurriedly assembled to supply the demand we had created.

NOW—after months of preparation we are able to produce enough KARAS Orthometric Condensers to take care of at least a fair share of the demand.

If your dealer hasn't secured a stock of Karas Condensers

Applied A B C Principles of Radio Receivers

Part II—Your Duties as Train Dispatcher

By Carl Patterson

THIS season the majority of receivers are divided into the three classes: single circuit regenerative, 5-tube, and super-heterodyne. The chief difference between these receivers lies in their ability to separate stations and permit you to bring in to the unloading platform the train which you wish.

At the end of last week's article, it was stated that the 3-tube regenerative set provides only a limited switching equipment. Within the receiver there is a unit called a condenser, which operates in conjunction with a single layer coil of wire, and these two pieces of apparatus constitute a switching arrangement by which various trains can be brought in. If your terminal is provided with only one set of switches, as in this receiver, it is easy to handle the equipment but difficult to get the desired results. The 5-tube receiver includes three of these switching combinations and 2 tubes used as refueling stations.

Different Size Trains

Getting back to our comparison with a railroad, the effect of this switching arrangement as used is as though each train had a different width between the wheels, and you had a number of tracks with varying distances between the rails. It is up to you to manipulate the switches so that a train with a distance of, let us say, 5 feet between the wheels, gets on to the track in which the rails are 5 feet apart. A few minutes later it may be necessary to get a train with 4 feet 6 inches between the wheels onto the track with that distance between the rails. If your switches are set for the 5 foot width, any train which tries to come through having a different width between wheels will be derailed and does not get to the unloading platform, which is the detector.

The difficulty with the 3-tube receiver is that, due to the strength of local broadcasting stations, which may be comparable to the high speed of certain trains, they are enabled to jump over the switch and get to the detector where they unload at the same time with some other train. The 5-tube receiver in addition to provid-

ing refueling points, gives you three switches, and undesired incoming trains, if they jump the first one, will probably be wrecked by the second one, and surely by the third. Naturally, some manufacturers make their equipment more efficient than do others, and most of the cheaper outfits on the market are so inefficient as to switching apparatus, that unwanted trains get by even with three groups of switches.

It is your duty as the train dispatcher to carefully adjust the width of the rails at all three points so that they are exactly the same, and only the desired train can ride the rails. If this is done with sufficient care and the receiver is of a good make, even those stations whose wheel separations is very close to that of the desired train, will not get through and cause interference.

Known as "Wave Length"

The Radio comparison to this distance between wheels is called "wave length," and each station has a different wave length on which its programs are sent. The super-heterodyne provides only one group of switching apparatus but this is exceptionally efficient and usually functions better than three or four of the ordinary switches as contained in a set of the tuned radio frequency type. The super-heterodyne has one desirable feature in that there are only two dials necessary for the manipulation of its very complicated switches. It, of course, also provides amplifier tubes so arranged that they correspond to refueling trains which you can send out to strengthen those incoming trains which are very exhausted.

Part of your duties as train dispatcher includes the upkeep and care of the detector tube, the unloading platform, the amplifier tube refueling points, and the vacuum tubes provided to increase the volume of the programs after they are unloaded. All of these tubes are kept in operating condition by means of batteries, of which there are three types.

The first and most important kind is called the A battery which may be either the storage variety or consist of dry cells.

This battery is used to light the filaments of all tubes no matter what their use in the receiver, and this would correspond to repairs and replacements on our railroad system. The B battery supplies the difference in energy between that contained on the programs as they come in and that which is found at the loud speaker, to give the desired volume. The purpose of the B battery might well be compared to the salaries of the employees of the railroad. The C battery is found on most receivers, although there are a few which do not allow for their use, and the purpose of the C battery is to make all signals clear and distinct and also to cut down the amount of current drawn from the B units. The C battery corresponds to the efficiency manager and his department, on our railroad. Without the C battery there is likely to be too much current (salaries) drawn from the B units and the program, when unloaded, may be distorted.

Care of Batteries

The repairs and replacements are taken care of by frequent testing and recharging of the storage battery or occasional replacement of the dry cells. The care of the storage battery is fully explained in another article in this issue of Radio Digest. B batteries usually require but very little attention and perform their duties most efficiently. It will be necessary to replace the efficiency manager or C battery only about once every four months. The amount of energy drawn by the filaments of the tubes from the storage A battery or dry cell A battery, is controlled on the front of the panel by small knobs attached to pieces of apparatus which the Radio man calls rheostats. Turned in one direction they permit the tube to draw out more current, while turned in the other the available amount of energy is cut down. A certain point is usually found in the matter of rheostat adjustment from which the tubes draw

out sufficient current, but not too much from the standpoint of economy.

Antenna Important

Little has been said up to this point about antennas, of which every receiver needs one, nor about a connection with the ground. These two adjuncts have no similar equipment on the railroad. A receiving antenna or, as it is also called, an aerial, consists of a single wire either outside the building or within it, which serves to collect the various programs (trains) flying through the air and guide them to the receiver. The ground connection does this also, except that it collects that portion of the Radio energy from a broadcaster which travels in the ground.

All the 3-tube receivers available, and most of the 5-tube sets known as tuned radio frequency, require such an antenna and ground connection. There is no question but that a wire from 50 to 100 feet long, strung outside, about forty feet high if above a house and 10 feet above the roof if over an apartment building, is vastly superior to any arrangement of wire inside. A length of wire can be strung around the picture moulding in one or two rooms or it can be stretched in the attic, but it cannot give the range possible from the same length of wire hung outside. An inside antenna such as mentioned has only one point in its favor. In hot months it will not pick up quite as much static or atmospheric interference as will the outside wire—neither, however, will it pick up as much Radio station energy. At best it can only be called a makeshift to be used where the erection of an outside antenna is impossible.

Get a Good Ground

The ground connection is obtained by securing a wire to some large piece of metal that has broad surface in contact with the earth. Most Radio set owners

Canary Shares Place Of Honor with Organ

Bird at WOC Breaks Into Program Unannounced

DAVENPORT, IA.—Dr. B. J. Palmer's pipe organ, frequently heard in organ recitals broadcast from WOC in this city, usually has a rival for the place of honor on the broadcast programs. That rival is no other than a little canary. Many of WOC's listeners have commented on the little feathered fellow's determined efforts to make himself heard. Day or night, no sooner does the organ start playing than the canary starts up his song, and although his cage is located at a considerable distance from the microphones, his notes can be very plainly heard through the ether. Although never announced the canary is a frequent artist at the Chiropractic station at Davenport.

WAAM Brings Christmas Cheer to Crippled Kiddies

NEWARK, N. J.—So that the inmates of the Home for Crippled Children, in this city, might enjoy a more cheerful Christmas, Station WAAM broadcast a special feature Thursday afternoon, December 17, to swell the Christmas fund of the institution. Written requests for numbers accompanied by donations to the fund were broadcast during the afternoon, and fans from every section of the country and Canada helped to bring joy to the unfortunate kiddies.

The following artists appeared on the program and gave request numbers exclusively: Ray Nichols Recording orchestra, Hilda White Kay, John A. Scott, Arthur Johnston and the Hartley Joy Boys.

University of Cincinnati Is Now Broadcasting Lectures

CINCINNATI.—Following the custom of the past two years, WSAI is broadcasting a series of lectures by faculty members of the University of Cincinnati. President Frederick C. Hicks recently inaugurated the new series which can be heard every Wednesday night at 10 o'clock, central time, when some member of the faculty gives a five-minute discussion on various phases of science, art or literature.

DIRECTIONS FOR REQUESTING INFORMATION

The Questions and Answers department offers service to Radio Digest subscribers without charge and, to those not subscribers, the same service with a charge of 50c for each letter requiring up to three answers or diagrams. We feel that this policy is necessary for the protection and best interests of our regular readers, as the volume of correspondence to this department has increased to such an extent that it is almost impossible to give our subscribers' letters adequate attention nor a complete answer. To those who have long been newsstand readers this may, at first, seem an injustice but a little thought on the matter will show that this is the only possible solution of what has been, to the technical department, a very perplexing and difficult problem. We ask that the following suggestions be read carefully before writing:

1—Search carefully the back issues which you have, as the point in question has probably been covered several times before.

2—The book, "Radio Receivers," given free with each yearly subscription (when received by Radio Digest direct with full remittance of \$5), contains the answers to the majority of the questions asked. If you have this book, go through it thoroughly and it is probable that you will find the solution of your problem.

3—Letters for this department should be kept separate from all correspondence to other departments and on other subjects.

4—Questions should be written on one side of paper only and each sheet should bear the sender's name and address. All letters should be accompanied by a self-addressed stamped envelope of standard business size.

5—Unsigned (or anonymous) letters cannot be answered, either in

Radio Digest or by letter, nor can those without address.

6—No comparative statements on advertised apparatus will be given except as to efficiency in some particular circuit.

7—Drawing diagrams on a separate sheet of paper will save time and enable us to give all questions more attention.

8—Write each question as a separate paragraph.

9—Keep a copy of your letter and diagrams, to which we can refer without re-drawing.

10—The names and addresses of the writers of letters published will not be released except with the writer's permission.

11—We want to be of assistance to you in your difficulties, but are sometimes limited because of the length and time required for the proper consideration of the questions asked. Therefore, please make your letters brief.

Atwater Kent Hour in Canada

MONTREAL.—The first of a series of Canadian Atwater Kent hour was given recently by Station CKAC, La Presse, Montreal. Arrangements have been made between the Atwater Kent company and the Canadian superpower station to broadcast a number of concerts by famous artists booked by the Radio firm. Artists appearing on this special series travel from New York to Montreal to broadcast the programs.

Are Now WLIB Artists

The Langdon brothers, Hawaiian guitar specialists, well liked by Chicago listeners, have become exclusive WGN and WLIB artists. They are heard usually on Friday evenings between 10 and 11 p. m., central time, from WGN, and during Fred Hamm's Sunday afternoon jazz concert over WLIB.

APPLIED RADIO A-B-C'S

(Continued from page 27)

get this by firmly clamping or soldering a wire to a cold water pipe which provides miles of surface in contact with the earth. Farm users must devise some other method and this usually results in their driving a long rod about four feet into the ground, preferably where it is damp, and attaching the wire from the set to this rod. A still better idea, however, is to bury all the large pieces of metal available with a wire connecting them all. The thin copper shims used on cars between the cylinder block and the cylinder head are excellent for this purpose and garages are usually very glad to have someone drag them away. Old copper wash boilers, ice box linings, chicken wire, rain gutters, etc., are used.

The super-heterodyne, in 95% of installations, does not require either outside wire, inside wire or ground connection. Its pick up means takes the form of a square framework about two feet on a side, wound with 85 to 100 feet of flexible insulated wire. The ends of this wire are lead directly to a condenser within the set and this type of antenna, which is called a loop aerial, forms, with the condenser, a switching arrangement. It takes the place of a coil which would, ordinarily, form the wire part of our switch. The super can be altered to operate on an outside wire and ground connection if one desires to do this.

(Connecting the accessories and the operation of receivers will be the subject of the next article of this series by Mr. Patterson.—Editor's Note.)

South Dakota Woman Logs

345 Stations in Two Years

DX champions throughout the country may well look to their laurels. A strong contender for long distance honors entered the field when Mrs. Marie Quickstad of Toronto, South Dakota, sent an official affidavit to the Radio Digest to the effect that in the past two years she has tuned in and logged 345 Radio stations. In her log are included stations in Cuba and Porto Rico. As there are only four stations in her state, Mrs. Quickstad has become accustomed to reaching out and bringing in distant stations.

When using battery chargers it is absolutely necessary to connect the positive terminal of the charger to the positive terminal of the battery.

Building a Super?

Ryan's Simplest Possible Super-het Manual

50¢

Full Size Drilling Templates— Loop Aerial Construction

ANYONE who has built a crystal set or single-tube can follow Mr. Ryan's concise, simply worded instructions and enjoy the range available only from a super-heterodyne. Every wire, every lug, is placed by his directions and you cannot go wrong.

The construction of loop aerials, storage "B" batteries, a charger and even the cabinet are gone into thoroughly. This manual covers the complete installation of a selective, quiet, long range Radio outfit. Send money order, stamps or currency to

Code Practice Buzzer Easily Made

Experimenter Can Wind Magnets Very Cheaply

If you have a small transformer, a very good buzzer can be made at very small cost for practicing the code. First get two spools and wind twenty-two turns, then put some tape on and then,

WORKSHOP KINKS EARN A DOLLAR—

THERE are many little kinks worked out at home that would aid your fellow Radio worker if only he knew about them. There are new hook-ups, new ways of making parts and various unique ways of operating sets that are discovered every day. Radio Digest is very much interested in obtaining such material. Send them in with full details, including stamped envelope, so rejected copy may be returned. The work must be entirely original, not copied.

RADIO KINKS DEPARTMENT
Radio Digest
510 North Dearborn St., Chicago

without breaking the wire, wind on twenty-two more turns. Use number 23 d.c.c. wire. Then force stove bolts through the spools and clamp them to a small panel provided with a baseboard. Then cut a piece of tin and bend at right angles so it can be fastened to the baseboard and set just in front of the spool cores. The illustrations show how these parts go together. When adjusting for operation do not let the tin quite touch the bottom core but keep it about 1/8 inch from it.—Harry Freeman, Mitchell, S. D.

Homemade Cablelug

Take a burned out or broken WD-11 type tube and remove all the glass part. This may be done by heating the solder tips of the pins and pulling the glass from the base. Now solder the terminals

of a four-wire cable to the contacts within the tube base and fill with sealing wax. A hole may be bored through the panel and a WD-11 type socket used for the wire terminals within the set.—G. E. Norton, Oklahoma City, Okla.

Salvaging Pfanstock Clips

Most Radio fans have worn out B batteries lying around. One can make good use of the clips on them by breaking out the clips and boring a hole big enough for a binding post or machine screw close to the end of the clip where it is broken from the battery. There are many uses for the clips after they have been fixed this way. The experimenter who makes set-ups of apparatus and then makes changes can put the clips on condensers, rheostats transformers, etc., and then does not have to melt solder at the connections.—Allan Waldron, Oregon, City, Ore.

45 volts, \$5.25; 90 volts, \$10.00; 112 1/2 volts, \$12.50; 135 volts, \$14.75; 157 1/2 volts, \$16.80. Truly the biggest buy today. Easily charged on any current including 32-volt systems. Any special detector plate voltage had. Tested and approved by leading authorities such as Popular Radio laboratories. Over 3 years sold on a non-refundable 30-day trial offer with complete refund if not thoroughly satisfied. Further guaranteed 2 years. Knock-down kits at great savings. Complete "Hawley" "B" battery charger, \$2.75. Sample cell, 35c. Order direct—send no money—simply pay the expressman cost on delivery. Or write for my free literature, testimonials and guarantee. Same Day shipments. B. Hawley Smith, 317 Washington Ave., Danbury, Conn.

DETAILS OF BUZZER CONSTRUCTION

Switch Permits Wide Wave Range

Many single circuit receivers will not tune to the very high waves. If you wish to receive stations on these waves, here is a simple way to do it. Obtain one of the small double-pole, double-throw

switches on a bakelite or hard rubber base (or a DPDT jack switch) and wire according to the attached diagram. The switch may be mounted anywhere convenient about the Radio or on the panel or sub-panel.—Allan Murphy, Paducah, Ky.

Fixed Condenser Terminals

This is a good wrinkle for the fan who is always building up and tearing down new hook-ups. Switch contact points have a threaded portion and nuts and make good binding posts by slipping the

threaded portion through the holes in the fixed condenser. Connecting wires can be slipped under the nut or the head of the contact point and, when an assembly is being torn down, it is not necessary to unsolder a lot of leads.—Omer D. Evans, Hazelton, W. Va.

EKKO BROADCASTING STATION STAMP ALBUM

Official Stamp at Over 400 Stations

A permanent, authentic means of recording all stations you hear. Squares for more than 650 stations. Proof of Reception cards furnished with album. Send card to station, proving you heard it, with 10c to cover cost of verification. They send you beautiful engraved verified stamp showing call letters. Almost all, over 400 stations, distribute Ekko stamps. Album is 9 1/2 x 11 inches, handsomely bound in two-color board cover, 96 pages. Start your collection now. Sent postpaid on receipt of price.

MONEY BACK IF NOT SATISFIED Price \$1.75

THE EKKO COMPANY
940 Harris Trust Building CHICAGO

Driving Ground Rods

I am attaching a sketch of the method I use in putting in ground rods in the winter time. When using a regular telephone ground rod for a ground, take three pieces of half-inch gas pipe in two-foot

lengths, thread both ends, and place the ground rod inside. As the rod is driven into the ground, uncouple the pipe. This arrangement holds the pipe steady for driving and prevents it from bending.—R. H. Rauh, Luton, Iowa.

Letters received from fans all over Great Britain show that London programs are preferred to those of any other British station. Country fans are unanimously of the opinion that 2LO is better than their local stations.

The MOLLIFORMER "B" UNIT REPLACES "B" BATTERIES

BUILD IT YOURSELF

You can build the marvelous unit easily in an hour and have a "B" eliminator that gives perfect reception on Locals or DX stations. Model FW4 designed especially for 5 or 6 tube sets has low internal resistance. Full wave rectifier and perfect filtering action take out all AC Hum. Capacity 90-120 volts. If your dealer cannot supply you order direct. Descriptive literature and wiring diagram sent upon request.

Price per Kit of all Parts— \$17.00
60 cycle
25, 40 or 50 cycle 19.00

Kits include full wave rectifiers.
DEALERS—The Molliformer will make friends for you. Send for demonstrator today.

C. E. JACOBS, Sole Mnfr.

Filament Circuit Tester

No doubt many a fan has had the experience of blowing a tube from a short circuit in the filament leads with those of the B circuit. This device prevents that. Take the base of an old tube and

solder leads from a small auto light to the filament pins of the tube base. Then force the light down into the base, making sure that the wires do not short and pour melted wax in around the base of the lamp to hold it in place.—Edward Ford, Birmingham, Ala.

ELIMINATE! STATIC!

Enjoy perfect reception regardless of weather conditions. The Static Eliminator—the newest and most startling thing in Radio—cuts out practically all static without loss of volume! And in addition it will help increase selectivity, tune out local stations, sharpen signals, remove noises, lessen interference and prevent re-radiation!

Use it with any receiving set—simply hook up to your aerial lead-in and enjoy perfect reception unmarred by static.

The Reader's View

Cheating Themselves

I have been very much interested in your comments on the attitude of the announcers of some broadcasting stations. I think, by continuing along the lines that you have started, no doubt, some good must develop.

My experience has been the same as many of your subscribers. I have logged over 235 different stations and last night I made a record for my set. I tuned in for a period of over two hours and heard one station announced, that was WBOQ, Richmond Hill, N. Y. There was a very good program by some station around 260 meters that I would say I listened to for at least three-quarters of an hour. The program was an excellent one on which anybody who heard it could not help complimenting the station if they knew who to compliment. A week ago I listened to one of your Chicago stations at about 11 o'clock for over one solid hour with the hopes that I would hear the name of the station announced. The reception in both of these instances was very clear but in neither case was I rewarded for my patience.

At some of the stations which do announce at, I would say, about 2-4 time so that you can get everything clearly, when it comes to announcing the name of the station, the announcer immediately jumps to 8-10 time. There is only one conclusion I can draw and this is the station is on the air for the entertainment of those only who are in the studio or who know what to expect.—T. P. D., Hartford, Conn.

He Has to Criticize; He's Our Critic

We are sure a good many readers of Radio Digest would enjoy your column if you desisted from adverse criticism of certain stations, or at least had the courtesy to omit the call letters in writing of broadcasters who personally disatisfy your tastes.

We are speaking now, in particular, of your naively phrased criticism of WSMB, in the November 21 number.

If your set can stand the strain, we would suggest that you tune in on WSMB and notice if any musical numbers are repeated for telegraphic requests. They are not. The announcer only reluctantly started reading a few telegrams over the "mike" after insistent requests of thousands of listeners—and then only on dance nights.

Having only logged 174 stations so far, I am really no authority on the idiosyncrasies of broadcasters and my opinion that WSMB is above the average cannot compare, of course, with your superior judgment.

It would be easier on the eyes, though, to keep the columns of Radio Digest free from warped personal opinions.—W. A., Covington, La.

After Every Number

I noticed last night a number of station announcers still neglect to give their call letters between each number. The worst of these offenders were WMAK of Lockport, WBAP, Fort Worth, and WJR, Detroit.

I would suggest that you try, through the editorial columns of your paper, to get the different station announcers to at least announce their call letters after each number. Some of these stations last night played as many as eight numbers without making any announcement as to their station.—R. M. K., Chicago.

Attention Announcers

Why do so many of you announcers withhold your call letters and location? How long does it take to pronounce three or four letters and the name of the city? Give us at least the call letters before each programmed number and we can find the location.

Don't forget that there are new Radio owners making up their logs, dealers

demonstrating to prospective buyers and other reasons why you should identify your station.

We certainly appreciate the splendid programs rendered and other efforts of the broadcasters.—A. C. R., Cambridge City, Ind.

Attention, Pacific Coast!

There seems to be some difficulty among the California stations in trying to get their favorable decision to close down one hour each night during International Radio week, when the fans of the country are to listen in for foreign station programs. Now there should be no difficulty in convincing Californians that their stations should get off the air for the seven hours of the tests. Here are a few reasons:

1. California, if it does not sign off, will be heard all over the U. S. Any three or four tube set (and larger sets, of course), can get California under such conditions—just when the listener doesn't want the "sun-kissed" state.

2. If the California station owners desire to serve the interests of the largest majority of listeners, it would do well for them to concentrate their minds on the fact that not one-tenth, indeed, not one-twentieth of the American invisible audience lives on the entire Pacific slope, or is out of range of European reception.

3. If only a few Pacific coast stations decide to disregard the international tests and keep on broadcasting, in order to serve perhaps their miserably small quota of the listening audience, they will be ruining the small chances of five millions of fans living in all parts of the United States and Canada, for hearing any of the European stations.

4. Whether or not the Pacific coast fans' sets are capable of European or Asiatic reception, the Pacific fans want to try. I know this for sure, for I am one, and I have asked many of my Radio friends, all of whom are of the same opinion. I know of a number of sets as small as two tubes located here on the Pacific coast which heard Europe last year, that is, when the coast stations shut down. My four tube dry cell set picked up two.

The above four reasons seem to be enough. Why go further? If any coast station stays on the air during the test hours, it is going to be labeled "AIR HOG" by 95 per cent of the United States and Canadian Radio public.

I suggest as fit retaliation that disgruntled Radio fans, of which there are sure to be several millions, quit eating grape fruits, oranges, raisins, prunes and stop using anything coming from California. That's a harsh order coming from a native Californian, but it is one way of bringing the question to an issue. Eat Florida oranges and citrus foods. Go to Florida instead of California for your

vacation. And let California broadcast all it pleases, if it has any money with which to do so.—R. A. M. San Francisco, Calif.

CHALLENGE!

ONE DOLLAR will be paid to the Radio fan submitting the most errors in any one station's listing in this directory. Letters must reach Radio Digest office not later than one week from date of issue corrected. Readers are not limited to correcting one station, but such corrections must be certified by the stations themselves, and NOT by comparison to other so-called accurate broadcasting directors and lists. Readers also must live in same state or province as stations corrected are located. Station verifications must accompany corrections.

That's just how sure Radio Digest is that this broadcasting station directory is correct! To make the challenge fair for everyone, broadcasting stations and their employes are barred from this offer. Why? Because the broadcasters are the source of all the data given herein. They are (or should be) interested enough to answer the inquiry sent them every time data on their station appears. This inquiry contains a proof of their last listing and must either be corrected or O K'd as correct and returned to the Digest. Nevertheless,

sometimes the stations are careless and mistakes are made. But Radio Digest is so sure of the exactness of this directory that this challenge is made unconditionally.

With reference to the directory: It appears in six parts, serially continuously; the first four parts are station data listings, arranged alphabetically; the fifth part is a state, city index of stations; the sixth part is a wave length index. The information contained in each station data listing is given in the following order: Call letters, city, state, wave length used, watts antenna input, owner's name, announcer's name, slogan used if any, name of listener in "club," schedule of operating hours, and kind of time used, as "Central," "Moun- tain," etc. Asterisks have been placed in front of corrected listings and new stations in order to distinguish these.

Six successive issues of Radio Digest will give one the most complete and accurate list of broadcast- ing stations obtainable. This service is original with this publication, and has been maintained from the start. Right of reproduction without permission of any or all of the data contained herein is denied.

KFLZ, Anita, Iowa. 273 meters. 100 watts. Atlantic Automobile Co. Operated by Walnut Grove Hog Remedy Co. Announcer, H. A. Marshall. Daily ex Sun, 11:50-12:15 pm, question box, markets. Tues, Thurs, 8:30-10 pm, music. Central.

(Note—The second part of the station data list will appear next week.)

ATWATER KENT RADIO

**“Now I can jump from one station
to another without leaving my chair**

“IT'S A GREAT COMFORT, I tell you,” said a veteran radio enthusiast the other day.

“I never knew what real radio enjoyment was until I tucked this new Atwater Kent set among my books and smoking things on this little table.

“My old set was across the room. It was so big and bulky that it had to have a table all its own. Compared with this Model 20 Compact it seems as cumbersome as an old-fashioned limousine.

“Every time I'd get comfortably settled, the station we were hearing would change its program or sign off. That meant getting up, crossing the room, finding another station and going back to my chair.

“I wish I'd had a pedometer some nights! I'll bet I walked miles!

“But with this little fellow at my elbow, I'm settled for the evening.

“It's right at home among my papers, magazines and tobacco. Everything I need for the evening is on the same small table.

“And when I want to find a new station, it's as easy as reaching for a cigarette.

“But the best part of it is that with its small size, the Compact has all the power and pep of a big set.

“All the same parts are there—five tubes and all—just re-arranged to save space. It will do anything a big set will do.

“It's got a great big heart in a mighty small body. It's the baby grand of radio!”

Model 20 Compact
Price, \$80
