KHJ FINDS SOLUTION TO QUESTION OF PAY

C C1 8644884

EXPERIENCE PROVES THAT PROGRAMS ARE BETTER

Artists Being Paid Indirectly By Donor of Program—Government Reaches a Similar Conclusion

WASHINGTON.—Has the answer to the question "Who Shall Pay for Radio Broadcasting," reached a satisfactory settlement? The department of com-merce year book seems to think that it

The introduction of the commercial ele-ment into Radio broadcasting, is probably the most important development during the past year. Previously all broadcast-ers sent out programs at their own ex-pense, but recently some stations established a fixed rate per hour for the use of their transmitters. "It now appears possible," the year book states, "that the cost of broadcast-ing may be borne more and more by those (Continued on page 2)

Left, Lenore Everett, KGO dramatic player heard recently in the comedy-drama "Homing," broadcast from KGO. Above, Dorothy Raye, celebrated songster in the "Around the Rainbo" show at Mann's Million Dollar Gardens, broadcast from WQJ. Right, Lotta May Kelly, feature on the "Nite Cap" program at WJAX.

SOOTH COPS WITH **TENDER SAW SOLOS**

Barber SAW SOLOS B director of a station any more. The other night someone called WEEI during a dance program and re-quested that they "play something soothing for the benefit of the Hing-ham police." So when the program ended, Stanley Greenlaw got out his saw and pounded out "Ole Black Joe" and a few more "soothers" for the law ind order department.

Lambdin Kay Enters Movies Convicts Broadcast Direct to Show How Stations Work

ATLANTA, Ga.—Movie acting is the latest role that Lambdin Kay, announcer at WSB, has had to play as part of the day's work at the broadcasting station.

day's work at the broadcasting station. He was the entire cast of characters in a one-man production filmed by an Atlanta theater as part of a Radio fantasie. He was shown in action before the micro-phone giving WSB's familiar salutation to the world while an impersonator simultaneously gave the call from behind the scene.

from State Penitentiary

PHILADELPHIA.—Early last spring amplifying apparatus was installed inside the bleak walls of the Eastern State Penitentiary in this city, and connected by telephone lines to Station WIP.

Done as an experiment, the first broad-cast caused much excitement. Three thousand telegrams poured into the studio offering congratulations and begging for more.

It was tried again recently, with even greater success than the first broadcast.

TESTS PROVE **TWO CONTROL** SET PERFECT

Cuts Through All Locals

Designer, J. G. Ryan, Tells Radiophans How to Build-Gets **Both Coasts Regular**

So simple a child can operate it, the most practical super-heterodyne has been developed at last in the laboratories of Radio Digest. The new wonder set, designed and built by John G. Ryan, Radio engineer of repute, not alone is simple to operate but just as simple to construct.

simple to operate but just as simple to construct. In tests made over a period of ninety days coast to coast reception has been regular. Simple to operate and construct, the efficient set is built from the fewest possible number of parts. Its cost will not exceed \$78.00, and additional acces-sories, most of which are already possessed by the average Radiophan, can-not possibly cost more than \$76.40. Selectivity is one of its prime asscts. (Continued on page 2)

a GROSLEY

For ease of tuning, selectivity and long distant reception, you can't beat a Crosley. Actual performances prove this day in and day out. Here are what a few of the happy Crosley users say: Apponnag, Rhode Island. "I purchased my Crosley one tube No. 50 around the first of August and I think it is my duty to express my satisfaction of its performance during the warm spell. Have heard New York, Boston, Pittsburgh, Clincinnati, Chicago, Detroit, Ottawa, Canada, and many other stations."

NEW TRANSMITTING SYSTEM DEVELOPED

INTERCHANGEABLE CODES CONTINUALLY ALTERED

Receiving Apparatus Automatically Re-sponds to Change—Sends Message Written Similar to Typewriter

Written Similar to Typewriter LONDON.—A new system of transmit-ting commercial intelligence and news by Radio, which is directly transferred from a typewriter in the transmitting station to the tape which spins out written characters in the receiving office, has been discovered. The discovery is due to the enterprise of two German scientists, but its exploitation and the development of its possibilities were quickly seized upon by William Dubilier, the well-known Radio manufacturer. The machine consists of a typewriter, a registering apparatus, and an assembly of eight compartments, each containing what looks like a transformer built on top of a magneto. At the head of each compartment are movable rods which send out the message by means of musical notes.

top of a magneto. At the head of each compartment are movable rods which send out the message by means of musical notes. **Uses Interchangeable Code** The receiving apparatus looks even simpler—a four-tube set, a box full of plugs and wires, and a camera-like mechanism, with a motor attachment; be-sides this, the wheel around which the tape runs. Secrecy is obtained by means of the fact that countless combinations can be used at will. The receiving ap-paratus automatically responds to the change, so that in the event of any suspicion arising that messages are being tapped their method of despatch can be immediately altered. Not ony can the time periods be changed of notes used can be changed at will, so that the transmitter may be changed automatically every few words without in any way affecting the operation of the receiving apparatus. Since transmission is effected by means of musical notes, atmospherics—the bugbear of Radio— are eliminated. The potentialities of the invention to business houses, which have so far fought shy of Radio because of its lack of secrecy, are enormous. Big stores can and all their branches in this way with utmost secrecy, changing their code from day to day. **BEST OF SUPER-HETS**

BEST OF SUPER-HETS

BEST OF SUPER-HEIS (Continued from page 1) Chicago, as is known to all local lis-teners, is one of the most trying cities for a receiving set. So many local stations are on the air nightly as to make out of town reception practically impossible except on Monday night when Chicago stations are silent. But the Radio Digest super-het proved equal to the task. The set was moved from one con-gested ether locality to another. Every test proved it capable of cutting through the worst of interference. Eliminate Unnecessary Controls

Unnecessary Controls Eliminate

Eliminate Unnecessary Controls Satisfied that the set was super selective, the next problem was to elimi-nate all but the absolutely necessary con-trols so that even the uninitiated listener in could operate it satisfactorily. After considerable work in designing the result was a super-heterodyne with but two tuning controls, a rheostat and a potentiometer. The two tuning controls are for condensers, one of which tunes the loop aerial and the other, the oscil-lator.

lator. John G. Ryan, the designer and builder of the set, now tells how anyone may duplicate it. His story appears on page 21 of this issue.

KHJ HAS PAID TALENT

<text><text><text><text><text><text>

DUBILIER'S NEW SECRECY DEVICE

William Dubilier, well-known condenser manufacturer, has recently brought to the attention of others a Radio secrecy code transmitter and receiver invented by two German scientists Commercial news and intelligence is typed on what appears to be an ordinary typewriter, which in turn sends out a jargon of code. This is ploked up by a special receiver and converted to the proper written words on a tape. P. & A. Photo.

derstandable.

Announcers Rile Fans WASHINGTON, D. C.—Local Radiophans are complaining that announcers for the various stations in signing off are slur-ring over the calls of their stations so that many times the letters are not un-derstandable. This is causing trouble to

RADIO FIELD GROWS FAST, REPORT SAYS MANY COMPANIES ARE FI NANCIALLY SOUND

idwest Economic Institute Shows Promising Future for Industry Not Even Thought One Once Midwest

Even Thought One Once CHICAGO.—Coincidental with the fourth anniversary of Radiocasting now being celebrated, comes a statement from the Midwest Economic institute which tells in interesting fashion the immense growth and present financial stability of the Radio industry. The Radio industry is this country but continental Europe, to such a degree that in England, where Radio has become a tational fad almost to the same extent is in America, some 900,000 receiving licenses have been issued and the total number of listeners in is around 4,000,000. And it is interesting to note that the American invisible audience is now esti-mated conservatively at 5,000,000 persons.

American invisible audience is now esti-mated conservatively at 5,000,000 persons. Becoming Financially Sound Fast "Another interesting angle of the Radio industry," the report of the Midwest Economic institute continues, "is the financial side of the question. A few years ago the Radio Corporation of America was practically alone in the field so far as financing through issued securi-ties was concerned, but today there are about a dozen such corporations aligned with all the other large corporate enter-prises representing the industries of the country in the financial markets. "That the whole industry has benefitted by this financial set-up is evidenced by exhaustive reports published in the latest poor's and Moody's manuals of such publier Condenser and Radio, Hazeltine, Ware Radio, J. W. Jones Radio, Tower Radio, Marconi Wireless and Marconi of Canada, Limited, and others who are among the leading manufacturing con-erns which have been working at capacity to supply the demand of the public for equipment and whose earnings and future prospects augur prosperity abute. Surprising Statistics on Industry ahcad.

Surprising Statistics on Industry

Surprising Statistics on Industry Four years ago the Radio industry was not considered of sufficient import-inder to give it an individual classification in the field of business. It was grouped inder electrical products, along with electrical toys. When broadcasting started many hailed it as a fad that would live only for a brief period. Today it is con-sidered one of the first industries of the orid and that sales of Radio equipment for at least ten years. This surprising to note that now there are more than 3,000 manufacturers of Radio supplies in the United States, 1,000 than 250,000 persons are connected directly or indirectly with Radio industry. All told Radio business approximating typen, and \$50,000,000 of this was in yaenum tubes alone."

Special Studio Gives Vision of Field for Announcing Plays as They Are Made-Nine Microphones Allow Listeners in to Hear Cheering and University Bands

IIII

Ohio University stad-ium where the foot-ball games being played are described by Station WEAO. Below, Operator M. F. Mc Do we 11 and the amplifying controls used.

By Alton D. Spencer COLUMBUS, Ohio.—What is believed to be the most claborate arrangement ever made by any broadcasting station for sending out the results of an athletic event are those used at the Ohio Stadium, the largest in the Big Ten football con-ference. Ohio state's broadcasting sta-tion, WEAO, furnishes the power that carrys the sound picture gridiron contests to a host of listeners. Profiting by the experience of one sea-son of broadcasting home games, attaches of the station have set the stage at the stadium and behind the brick walls of the engineering laboratory, where the plant is located. This gives the maxi-mum of efficiency in giving the running story of the games and snatches of cheer-ing and band music—as complete a pic-ture as can be obtained without being in actual attendance. Bliminate Relay Announcers The createst improvement made in the

in actual attendance. **Eliminate Relay Announcers** The greatest improvement made in the system is the elimination of relay an-nouncers. This system was discarded partly because of the difficulty of getting a dyed-in-the-wool football fan away from the game long enough to do the announcing at the studio. Last year it became necessary once or twice to put one unskilled in "gridiron" phraseology on the line, with uncomplimentary re-sults. sults

The system employed this fall centers all announcing, cheering, band music and customary sounds of the game in a tiny white booth located in the middle of the west press box at the stadium. It con-nects directly with the broadcasting sta-tion.

University Bands
 Nine microphones send the audible impressions picked up into a miniature switchboard at the announcer's booth. Eight of these are located in the upper tiers or aprons at the east and west centers of the stadium. The ninth is for the exclusive use of the announcers. In addition to wires from the "cheering microphones," lines connecting with assistants located at the henches of the rival teams flow into the booth.
 Seated at a table just below the plate glass window of the little house, Announcer A. Lee Henderson and Engineer Robert C. Higgy have complete control of the situation. From their window they have a comprehensive view of the game and the happenings in the big horseshoe. What cannot be seen is relayed to them hy the two information scouts camping on the team benches. At the station, located about two blocks away, Operator M. F. McDowell and his assistant, A. M. Rose, handle the intricate transmitting apparatus and the control of sound volume, which is accomplished through an adaptation of certain telephone cquipment to the needs of Radio.
 Connect All Incoming Lines
 The stadium broadcasting headquarters is an innovation, being simply a small studio for the announcer. The walls are padded and draped with studio cloth, making it as nearly soundproof as it is possible. All incoming lines connect with a small switchboard designed by Mr. Higgy for this purpose. By the pressure of a button, the vices of Announcer Henderson comes through without interforence. Other switches bring in either or both of the "cheering microphones."

INTERNATIONAL EXHIBITS FORM GRAND DISPLAY

Amateur Set Builder's Contest Attract-ing Nation Wide Attention-Many New Devices Promised

New Devices Promised CHICAGO.—Fans throughout the middle west are anxiously awaiting the opening of the Third Annual Chicago Radio show which takes place on Tuesday afternoon. November 18, and continues until mid-night, Sunday, November 23, at the Coliseum in this city. The exhibits, which will all be of the De Luxe variety, will completely fill the huge building and all of its additions, occupying nearly one hundred thousand square feet of floor space. Notable among the exhibits will be some French receivers, tubes and battery eliminators, recently perfected by a cele-brated French electrical wizard, which threaten to revolutionize Radio reception. These startling devices, which are not yet on the market, will be given their first public demonstration here. Contest for Set Builders

on the market, will be given their first public demonstration here. Contest for Set Builders In addition to the vast number of manufacturers' displays through which they will introduce their new models to the enthusiasts of this country, there will also be several extremely interesting novelty exhibits, including a "New In-ventions' Department," a "Practical Mina-ture Model Exhibit" and an "Amateur Set Builder's Contest." The latter is at-tracting nation wide attention and entries are coming in from all parts of the American continent. Feature programs will be broadcast every afternoon and evening direct from the special studio which has been in-stalled in the south balcony of the Coliseum. Six of the most powerful broadcasting stations in Chicago will contribute talent. **Financiers Interested**

Financiers Interested

Financiers Interested Confidential representatives of the world's most important banking houses will also be in constant attendance, look-ing for opportunities to finance new and feasible Radio inventions. One eastern capitalist has authorized his Chicago rep-resentative to invest a large sum in five of the most promising local companies, the selection to be made after a careful investigation, which will begin on the opening night of the show. Numerous Italian and Japanese sets will be on exhibit. Many of these arrived too late to be shown at the New York show, and will be seen here for the first time in the United States.

New Transmitter Operates Like Pistol; Is Portable

LIRE FISIOL; IS FORTABLE, LONDON, Eng.—A new transmitter has heen invented here recently, which can be carried about and used for summoning help in case of an attack by robbers or other distressing occasions. The set is operated much like firing a pistol, and sends a signal which can be picked up at moderate distances by any receiving set.

Here it is! all ready to tune in

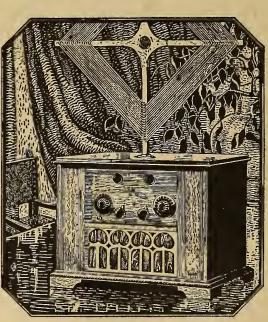

All you have to do is to use and enjoy it

SOME people like to spend days and weeks "collecting" a radio receiver part by part, and putting the whole together. Most people don't. They like an instrument to be ready—and each part of it known to be beyond challenge. They like a beautiful case that helps to furnish a room. They don't want the bother of stringing wires or of assembling parts. They want certain, quick results as soon as they receive their instrument.

Such people gravitate naturally toward the De Forest D-12 Radiophone. From the very beginning you get splendid results with it, even if you are an admitted "greenhorn." Yet such is the technical skill embodied in it that whether you are expert or otherwise you can go forward progressively with this instrument; you can fully realize the wizardry of radio as it calls the mysterious voices from the brimming radioways.

That the De Forest Radiophone is the standard

in the radio world you probably know; for Dr. Lee De Forest, the great creative genius of radio, is its sponsor. A cheap machine it is not-though it costs about one-third less than any other that produces anything like equal results. An economical instrument it is. Sound engineering principles have given it a really surprising range; and this without any outside or inside wire, any ground wire. Also, the De Forest is conveniently movable from room to room.

Remember that the purchase of the De Forest D-12 gives you at one price everything that is required to make it usable in your own home. There is nothing extra that you need buy. It contains tubes—batteries—loud speaker—loop—everything necessary.

It will pay you to look up a De Forest Agent

De Forest from first to last stands for all that is substantial and thorough and fundamentally right in radio.

De Forest agents are qualified to give sound and practical advice and help in radio. When you find a De Forest agent you find a man who knows radio —a man who has given us his word that he will see that every instrument he sells is thoroughly inspected and properly serviced after the sale. Avail yourself of his help. He desires, as do we, that you should get the fullest enjoyment and satisfaction from your instrument.

> DE FOREST RADIO COMPANY Jersey City, N. J.

DE FOREST RADIOPHONE

De Forest (Separate) Loud Speaker For beauty and clear reproduction— Use the De Forest Loud Speaker. In this instrument are all the best qualities of phonograph and telephone receivers adapted to radio. It reproduces naturally, brilliantly, without distortion, your favorite music, the voices of your favorite speakers and entertainers. The adjustment of the reproducing unit assures uniform response over entirerange of audible frequencies. Its horn is shaped to retain the full brilliancy of the original sound, and also to add volume. Every De Forest Loud Speaker is guaranteed free from defects. Sold by authorized De Forest dealers only. Price with 6 feet of cord, \$25.00. Every set deserves De Forest Tubes The original three-electrode vacuum tube that made present-day radio possible was a De Forest. Today, as in the past, De Forest tubes are unsurpassed for giving volume and beauty and clearness of tone reproduction. They are economical of current and have unusual long life.

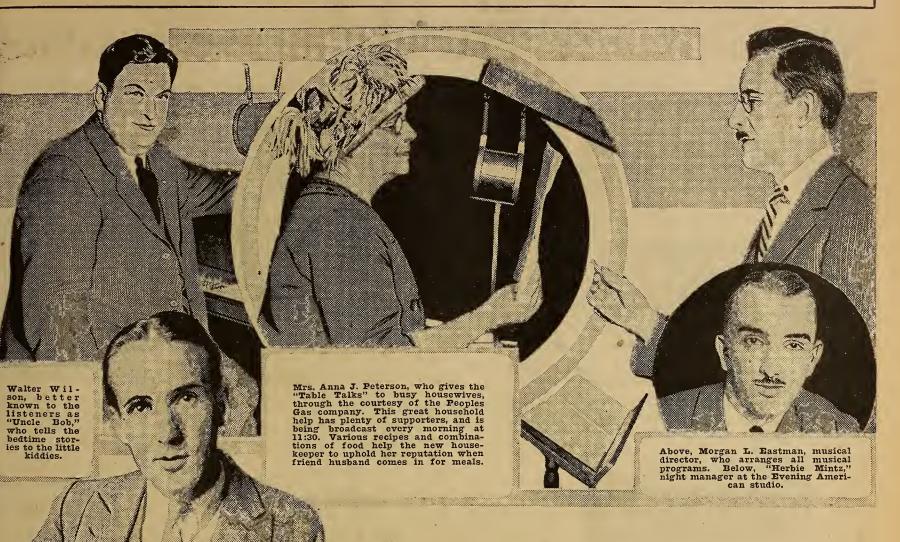

De Forest tubes can be used with all standard circuits. The DV-3 is for use with dry cells, the DV-2 with storage batteries. They are guaranteed against defects in material and workmanship. Sold only by authorized De Forest dealers. Price \$4.00.

De Forest DV-2 Tube for use with Storage Batteries.

KYW—Pioneer Station of the Middle West

Home of the "World Crier"

By E. E. Mattson

By E. E. K YW-the pioneer broadcasting station of the West. On Armistice day, this year the Westinghouse station at Chicago will celebrate its third birthday, after three years of amazing changes and growth. From a station that needed for its operation only four men and one woman, KYW has grown to a point where nearly thirty persons are required to run the programs and keep in condition the broadcasting equipment. The four men who have been with KYW from the beginning are still members of the staff. They are, Walter C. Evans, now chief engi-neer, Wilson J. Wetherbee, director, Morgan L. Eastman, musical director. The young lady who helped to pioneer Radio in Chicago is likewise still a member of the staff. She is none other than Miss Sallie Menkes. Today there is a 24-hour service, seven days

Above, Logan (Steve) Trumbull, chief an-nouncer and known to the Radiophans as the "Mark Twain" of Ra-dio. Left, "Eddie" Bor-rof, who announces at the Congress hotel studio of KYW.

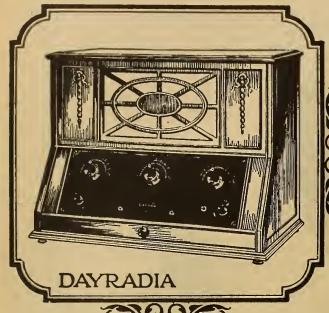

Today there is a 24-hour service, seven days a week—news, markets and late sport features

Mattson when the regular shows are not in progress The first broadcasting by KYW was done from the stage of the Auditorium on Novem-ber 11, 1921. Mary Garden addressed the comparatively few receiving set owners in the middle West. Edith Mason gave them a solo. Broadcasting was inaugurated in Chicago. Two days later KYW started broadcasting grand opera. Even with the limited equip-ment then available, two steel poles, a span of wire on the roof of the Edison building, and the handful of broadcasting material in the operating room, the station broadcast every opera of the season. It was in June of the following year that the present impressive aerial, that may be seen on top of the building, was erected. The original studio was on the eighteenth floor of the Edison building. In April, 1922, the studio was moved to the room now oc-cupied. The operating equipment, and it is massive compared (*Continued on page 11*)

Clear reception and selectivity are what every radio fan wants. To obtain these advantages, every part should be chosen wisely - beginning with the panel.

Electrasote Panels are unaf-fected by climatic conditions, they will not warp or change color. Due to their electrical qualities they reduce surface leakage to a minimum. And yet they cost less than other standard panels.

Electrasote is one of the famous 'sote" products intro-duced by The Pantasote Company, Inc.

grams and, after an announced period of time, write in, telling which program they liked the best. Winner to Receive Photograph The computer program is the subject **AIR FOR WGR'S FANS**

liked the best. Winner to Receive Photograph The one whose program is the subject of the greatest number of approval let-ters will be declared the winner. An announcement will be made to that effect on the air and in The Radio Digest, and the winner will receive a large auto-graphed photograph of the Vincent Lopez orchestra, including Harold Gieser him-self. Duplicate awards will be made in case of tie. The idea of this contest is to give Mr. Gieser and his men an opportunity to study more closely the likes and dislikes of WGR's Radio audience and to make the listening public actually feel to a greater degree the very great interest which Mr. Gieser and all those working with him, has in the Radio audience.

PERFECTION to the last detail! Even the unique bearing of the new Bradley-denser is a marked improvement over the older types. The rugged brass plates, the grounded rotor construction, and the new detachable dust shield are other details that serve to increase the high-frequency efficiency of the Bradleydenser. Exhaustive laboratory tests reveal exceptional improvements in efficiency. In fact, the Bradleydenser sets a new low record for losses. It tunes the weakest oscillations with the least energy loss, and, therefore, increases the range of any set. There are many other new and striking features of the Bradleydenser. Our new literature explains them, fully. Send for our latest bulletin on the Bradleydenser today.

NAVY ALLOWS USE OF RADIO PATENTS ATTORNEY GENERAL STONE HANDS DOWN OPINION

Reflex and Radio Frequency Sets Are Released for General Manufacture Independents

Reference of the purchase of both reflex and the several dependent of the U.S. Navy, assisted by Congressman freed Britten of Chicago, have recently accomplished a notable work in licensing independent Radio manufacturers to use the navy-owned German patents in making sets. The German patents held by the navy cover the manufacture of both reflex and addio frequency sets. Turing the war the U.S. Navy confis-forman Radio patents, among which was as the framous Schloemilch and Von Bronck patent. Inasmuch as these patents cov-patent. Inasmuch as these patents and Radio for unufacturers' hands were tied. Without licenses to manufacture under these patents all sets built that utilized either of these principles were infringe-ments. Now, however, with the recent promise of the judge advocate general of the navy to issue licenses to use these patents, set makers will have no obstacle in their path.

Alaska Fan Hears Station WQJ Broadcasting Program

WQJ Broadcasting Program CHICAGO.--Word has been received at Station WQJ, located in this city, that the program broadcast on the evening of October 21, was received with excellent volume at Petersburg, Alaska. J. L. MacKechnie, was the Radiophan who was listening in and heard them. "Your program is coming in here clear with slight interference" the letter said, "and Jerry Sullivan has just finished singing 'Tm sorry,' this was at 8:45 p. m. Alaskan time." The distance from Chicago to Peters-burg is approximately 2,467 miles figured on the great circle.

MECO

To gain the approval of thousands of critical radiophans in every part of the country MECO Tubes have had to produce greater volume without impairing clear, distinct, receptive tones. That they have done this is attested by the increasing number of receiving sets that use no other tubes. Look for the name "MECO" on the base of the tubes you buy.

MECO Tubes operate in any re-ceiving set, in 5-volt and 3-volt sizes with large or small bases. Your dealer has MECO Tubes at standard prices or can get them from recognized jobbers.

Metropolitan Electric Co. Des Moines, Iowa

World's smallest loud speaker emits music clear and distinct despite its size. Entire unit is enclosed in a celluloid receptacle.

At Moscow, Russian crowds are now treated to open air Radio concerts.

WAHG Appeals to Voters and Gives Final Returns RICHMOND HILL, N. Y.—Appealing to every voter to do his or her duty and cast a ballot, WAHG, A. H. Grebe and company station here was on the air election day from five o'clock in the morn-ing until the wee hours of the following day.

day. Throughout the day, as for several weeks prior to the election, political lead-ers gave short talks, emphasizing the necessity of voting. In the evening WAHG gave complete election returns direct from Republican national head-quarters. quarters.

quarters. The new station, opened only recently, was heard nation wide according to let-ters received following the election day program. A wave length of 316 meters is used.

KDKA Officials Hold Party on Station's Anniversary

PITTSBURGH.—Though KDKA's birth-day fell on November 2, the officials of the station did not, hold a formal birth-day program until November 3, when they presented a continuous program of presented a continuous program of broadcast features lasting from 12:30 noon until after midnight.

Famous Players and Coaches to Talk Between Halves

Hear "Old-Timers"

Football Fans Will

OAKLAND, Cal.—College football fans who tune in on KGO Saturday evening, November 22, will hear the familiar voices of seven "old-time" football players and coaches in various phases of the big game between the University of California and Stanford University teams, played at the California Memorial stadium on Saturday afternoon.

California Memorial Statistic afternoon. Walt Christie, veteran track coach of the University of California, will intro-duce each speaker before the microphone. Here are the old-timers who will be heard: Walter Christie, Paul M. Down-ing, "Greek" Howard, "Billy" Harrelson, Ollie Sncdigar, Percy Hall and "Slip"

Argentina Adopts Regulations

WASHINGTON, D. C.—New govern-ment broadcasting regulations have just been made public in Argentina. These regulations provide that all stations are to be divided into two classes, Class A and Class B.

Five Lube Funed Radio Frequency

The Greatest Value Ever Offered in a Radio Receiving Set

Built of the finest low loss materials, in a beautiful genuine solid mahogany cabinet, it is attractive enough to grace the finest of rooms and economical enough for the most modest.

The Masterpiece is the equal, if not the superior, of any 5-tube set on the market regardless of price. Brings in even the most distant stations with remarkable clarity and volume. So selective that you can pick up any station you want—night after night — at the same points on the dials.

WHAT'S MORE, It Is the Easiest Set in the World to Operate.

All genuine Freshman Masterpiece Sets have a serial number and trade-mark riveted on the sub-panel. The Receiver is not guaranteed if number has been removed or tampered with.

No Neutralizing or Balancing Condensers Required

Tuned Radio

Frequency Kit

DETECT

With these marvelous units you can easily build a five-tube tuned Radio Frequency Receiver that will be highly selective as well as a remarkable distance-getter, bringing in all stations with pleasing clarity and volume.

Kit consists of 3 Masterpiece Tuned Radio Frequency Units carefully matched and balanced. Complete with wiring diagram and instructions for building any 5tube tuned radio frequency receiver, and also drilling template for proper mounting.

Each and every Freshman Masterpiece Coil bears a serial number and trademark — our guarantee of electrical and mechanical perfection. For your protection demand only the genuine.

Radio & Condenser Products

STATION KYW; PIONEER (Continued from page 5) with the original broadcasting set, is still housed on the roof. As more and more programs were booked and broadcast, a larger and larger staff was needed. Mr. Wetherbee origi-nated the "World Crier" service, the first news service ever to be broadcast. At first the news was broadcast only over a three and a half hour period. Today the Radiophan may tune in on KYW on every hour and half hour throughout the 24 hours, and hear the latest news bui-letins. Nor have the other forms of entertain-Marked State Sta

every hour and hair hour throughout the 24 hours, and hear the latest news bulletins.
Nor have the other forms of entertainment been neglected. There is a studio fully equipped in the Hearst building, on the tenth floor. Two afternoon frolics, popular music shows given on Tuesday and Thursday afternoons, are broadcast from this studio, as are four night shows each week, midnight revues on Wednesday and Friday night and the "Evening at Home" shows Tuesday and Thursday.
There is a third studio in the Congress hotel where each Saturday night and the "Evening at Home" shows Tuesday and Thursday.
There is a third studio in the Congress hotel where each Saturday night and of A high order is broadcast. Besides this feature, KYW calls upon the Congress hotel each even hing, with the exception, of course, of Sunday night, and of Monday, silent night, for a half hour's dinner music. This, at the present time, is being furnished by Joska De Barbara's celebrated Continental orchestra.
The daily half hour visit of Walter Wilson (Uncle Bob) with the kiddies, is not a new venture. Uncle Bob's humor and fun is just what the children seek.

This Amazing molum Five Tube Set has Only **OneDial** toTune

Just ONE Dial to turn to get coast to coast range. Just ONE Dial to adjust to get perfect tone reception. Just ONE Dial to tune to get the utmost in selectivity.

Here—at last—is a five tube tuned radio frequency Receiver with a de-cidedly different and distinctive simplicity of design. It is a beautiful set —beautifully made,—and with its simple **ONE** Dial Control it will do any-thing any other five tube set will do,—and do it easier, quicker and better.

The Mohawk Tunes Out Local Stations

And Brings in Distant Ones Easy Just ONE Dial to turn on the MOHAWK, and as you turn it you tune in station after station covering the complete range of radiocasting wave lengths. It cuts out the nearby stations with ease and brings in the distant ones clear and distinct. You can operate it with an aerial of any length,—inside or outside,—without making adjustments and it will give satisfactory results under varying conditions.

"Bobbie" Brown stands by with the over-seas ukulele, ever ready to entertain. All of these are staff men. Surely everybody has heard of "Art" Linick, creator of the Radio comedy song, "Mrs. Schlagenhauer." And, ah! The ladies. In addition to Miss Menkes, are two others attached to KYW, and they both have important roles. There is Mary Casey, program editor and Mrs. Anna La Porte, who handles most of the bulky correspondence. Had names been mentioned in the order of their importance, the roster of the engineering army would have appeared soomer. Sarnoff Speaks

for High Power

R.C.A. Manager Defends Test of Giant Station to Secure Better Broadcasting

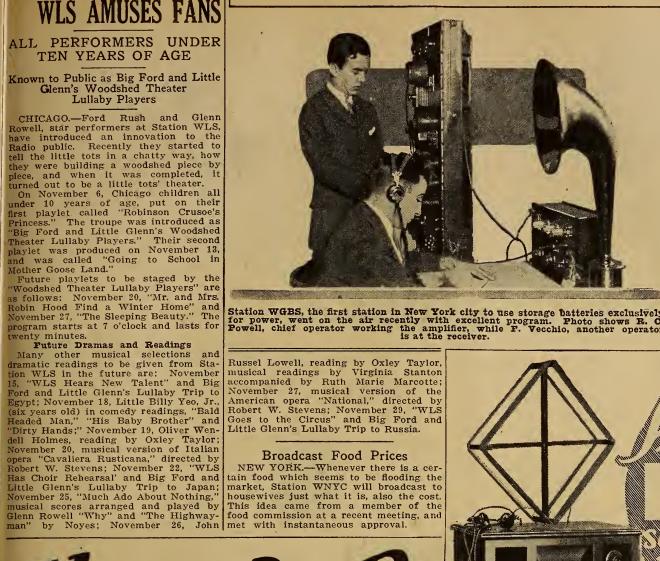

Broadcasting Broadcasting OAKLAND, Calif.—"The problem of super-broadcasting, like any other depart-ment of progress, will be settled upon the principle of public service," said David Sarnoff, vice president and general man-ager of the Radio Corporation of America, broadcasting recently from KGO, General Electric station located here. Speaking in defense of giant radiocast-crs, Mr. Sarnoff continued: "The problem of interference need not stand in the way of better broadcasting, for the third national Radio conference has wisely recommended that high power broadcasting stations shall be located out-side and at some distance from the populous centers. "I regard super-broadcasting as a stimulating form of competition to other systems of national broadcasting. It provides an effective substitute for wire line networks connecting a multitude of low power stations. "I can say that we are ready and will-ing to demonstrate the measure of service that super-broadcasting can render by erecting an experimental station, suit-ably located, that will prove the promise which super-broadcasting holds."

Station WGBS, the first station in New York city to use storage batteries exclusively for power, went on the air recently with excellent program. Photo shows R. C. Powell, chief operator working the amplifier, while F. Vecchio, another operator is at the receiver.

The TRANS-CONTINENTAL RADIO-PHONE, which is one of the most simple and clearest toned radio sets you have ever listened to, is the latest achievement of Mr. D. P. Coats of Chicago.

This radio outfit is entirely different from all others and just the kind of a set you have been waiting for. No outside wires needed. No troublesome storage batteries. It is built complete in a beautiful mahogany finished cabinet, Console type, with the loud speaker built right in so the entire family can listen to it just like a phonograph. No unsightly wires, or batteries lying around—no wires to con-nect up—no extras to buy. Everything is inside the cabinet. It is a real piece of furniture. You can set this attractive Radio Set in any room in the house and it will harmonize with your best furniture perfectly.

Hear Music and Talking 1000 Miles Away

The TRANS-CONTINENTAL RADIO-PHONE is guaranteed to have a range of 1000 miles and it will "tune in" sta-tions covering all broadcasting wave lengths within a thousand-mile radius of your home. It is a 4-tube set—yet so simple in construction, so compact in make-up—so loud and clear in tone, and yet so easy to operate that even a child can use it without any trouble whatever. GREAT LAKES BOAT BOASTS FINEST SET

BENSON FORD, CALL KFTC HAS LATEST IN RADIO

ect Interphone Connects Captain with Shore—WWJ Music Guides Vessel Through Storm Direct

Will Shore-Wyy missic characteristics Vessel Through Storm
DETROIT.—One of the best Radio-quipped ships on the Great lakes or on one ocean as well, is the Benson Ford, a new freighter owned by Henry Ford.
When the steamer's captain, William H.
Daniels, desired to talk to the captain of some other ship, or with the captain of the Henry Ford, II, another Ford freighter, he notifies the ship's operator. The latter immediately gets in communication with the ship. Captain Daniels then merely presses a button at his desk, and starts talking into a microphone just as he would into a telephone on shore. This is called the interphone system, and through its use time and effort are saved. **HTC Has Wide Range**Kenneth L. Brown, Radio operator of the Benson Ford, has been able to keep in touch with ships in any part of the Great lakes at all times since the Benson Ford was placed into commission. He also an communicate with ships along the ductate lakes and on the Atlantic coast.
The transmitter is a 500-watt set, using the 250-watt modulators, two 250-watt socillators and a 50-watt speech amplifier, it can transmitter is carried for emergen-cies. KFTC are the call letters, and under the license the station can be op-reated on 600, 706, 909, or 1,875, meters. **De Music to Steer Ship**

erated on 600, 706, 909, or 1,875, meters. Use Music to Steer Ship Up in the pilot house is Radio's latest contribution to the safety of sailing, a Radio compass. It is said that on the ship's first trip to Duluth the entertain-ment broadcast by the Detroit News sta-tion, WWJ, was used in keeping the ship on its course through Lake Superior. Bearings also were taken from WWJ and the land station at Cape May, N. J., dur-ing the most severe storm experienced on the trip to Duluth.

ORANGES-GRAPEFRUIT-LEMONS

THORDARSON ELECTRIC MFG. CO.,

Gentlemen: Several radio fans, or broadcast hounds, or whatever you may call them, have asked me what kind of equipment I was usine. I show them the Thordarsons and let: them sisten to some undistorted volume. They generally want to know where they can buy them. If you have any queries about your transformer

San Francisco, California.

The Reader's View

Another Call for Plain Announcing Some of the announcers, cannot be heard very clearly when they make announce-ment of the call letters, name of station, location and what has been rendered by that station. Some seem to be either too near the microphone or else they do not speak loud enough, as the announcement comes all in a jumble. It should be the same as this: $W \longrightarrow -O$, S. Jeffer—son City, Mis—souri. This would do away with so many inquiries as to letters of stations. stations

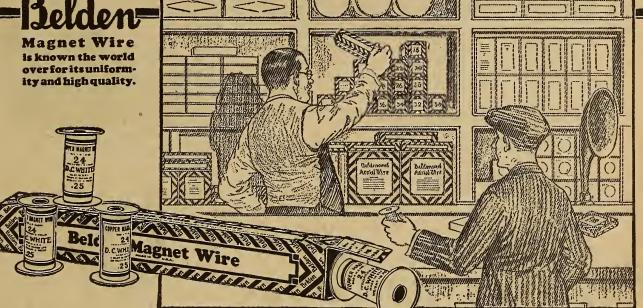

A School for Broadcasters I get the Digest every week, regular as a W. U. clock, and think it the best all-round Radio paper extant. I try out nearly every new hook-up in it weekly, and they all work, even on impromptu-connections. I have had in mind some time to write you about a very annoying matter to Ra-dio listeners, in this: A good many sta-tions have a careless habit of not an-nouncing as often as they should. Some, in giving Sunday services, will carry on a whole service without telling who they are, although they have ample time be-t tween songs, prayers, etc., to say what f city they are in, at least. Others will play long tedious band concerts without saying a word for half an hour or more. Why not have a small space in your paper captioned, "A School for Broad-casters," "Suggestions for Broadcasters," or somewhat like these, which could be a sort of clearing house for fans all over to contribute and thus get it before a sort of clearing house for fans all over to contribute and thus get it before a sort of clearing house for fans all over to contribute and thus get it before a sort of clearing house for fans all over to contribute and thus get it before a sort of clearing house for fans all over to charbite aboy of broadcasters all at once. I would be glad to hear from you on this, what you think of it, or if you know a better way to get this to the attention

RADIO DIGEST-Illustrated

Another Call for Plain Announcing

stations. I think that on Sunday nights when church services are broadcast that some announcement of the station rendering it should be made in some part of the serv-ice. Several stations do it. There are lots of good announcers who cannot be missed when heard. Glad to hear that spark "plugs" are on 750 instead of 450 meters, as is was very annoying. Yet some are still doing it.— Louis O. Dutcher, Rensselaer, N. Y.

Belden

The kind of Letters' Thordarson-gets-No. 6 Wind Your 01 for the New Hook-ups!

The joy of real accomplishment comes to the radio fan who tries the new hookups and succeeds in making new records of long distance reception. He leads others follow!

This fascinating work calls for special coils of new specifications. The enterprising experimenter winds his own coils to save time and to be sure that the new set will operate at the highest efficiency. To him comes the thrill of true scientific discovery and research.

Belden Radio Magnet Wire has been used for many years by famous manufacturers of radio devices. They require wire of uniform gauge, carefully insulated with high grade cotton or silk insulation from one end of the spool to the other. You should insist on Belden Radio Magnet Wire for your own protection. Every spool is full weight, plainly marked, and of full gauge throughout. Takes the Hot Potatoes Out of Singers' Mouths

Sure your Set is good, but that embarrassing evening you invited friends to listen to a program and the singers seemed to have hot potatoes in their mouths, and you finally gave up; what was the trouble?

Look at the Condensers! HILCO

Condensers absolutely do not change in capacity. They are incased in solid metal and built up of tested mica and metal. No rough handling or MOISTURE will ever spoil them.

HILCO CONDENSERS are guaranteed accurate within 5%. They will never spoil the balance of your set.

HILCO CONDENSERS are preeminent from an engineering standpoint, both from a low phase angle and because they have an extremely low equivalent series resistance.

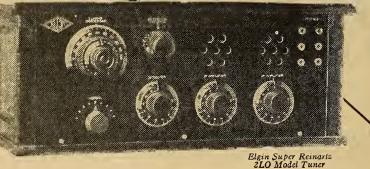

Take those old inaccurate, changeable capacity condensers out of your set and put in efficient, always-on-the-job HILCOS. They will save you many a wasted, embarrassed evening, and make that good set better.

For Sale at all dealers at our usual fair prices

Descriptive literature on Hilco Condensers, Matched Transformers, Oscillator Coupler, Multiformers and the famous SUPER HILCO-DYNE KIT sent free upon request.

RADIO APPARATUS DE LUXE

Flewelling Sockets require no downward pressure on tube. Contact is firm and made on side of tube terminals-not bottom! Extra spacing of contacts make it of the true low-loss design. Flewelling Condenser is close to perfection in lowness of losses and other electrical characteristics. Most care-fully built mechanically. Exceptionally

satisfactory in tuning any circuit. Flewelling Uniformer wins First Prize at Radio World's Fair as representing greatest advance of the year in set construction. Greatly reduces wiring and work of constructing a set. Astatic wound coils make a very selective tuned Radio Frequency set.

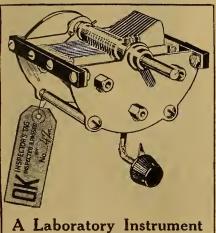

Flewelling Type S Tuner is of the approved basket weave design. With 80 and 30 turn coils (as regularly supplied) and in series with a .0005 mfd. FlewellingCondenser extra sharp tuning is secured from 220 to 550 meters. It is a real distance getter.

Flewelling Friction Vernier gives a ratio of 20 to 1 on a 4-inch dial. Friction disc is of special gum rubber. Knob is extra large and has real "feel."

THE ANTENNA BROTHERS

Spir L. and Lew P.

(Continued from page 19) quency; it is, however, all right for head telephone receivers and loud speakers. To keep the ohmic resistance of the induct-number 24 B & S gauge is the smallest size that should be used in winding in-ductances, while sizes up to number 18 and number 16 are to be preferred. The third element of loss in an in-dustry of the supporting the wire and the substances placed within the magnetic field of the coil. Around any wire which is carrying currents at Radio frequency there exists a magnetic field in which he lines of force change their direction and intensity from 100,000 to 3,000,000 times per second, therefore as little solid material as possible should be placed in this field so that the lines of force will have a free path for their flow and change. Any solid materials used for supporting inductance offer resistance to the passage of these lines of force and cause hys-teresis losses, which increase the high frequency resistance of the inductance. The latest type of inductance brought out in the endeavor to reduce distributed capacity and hysteresis is the basket

How to Build the Simplest Possible Super-Het Part I-Parts Essential for Building Set

By John G. Ryan

THERE have been many articles pub-fished in Radio Digest and other Radio magazines, on super-hetero-dynes--long sets, short ones, high panels, deep baseboards, many controls, two con-trols, one stage of audio, two stages and oven reflexed. Fans have built them, some with success and some with nothing or all preceded by straight R. F., and con reflexed. Fans have built them, some with success and some with nothing on show except a lot of parts and a feel-ing of disgust. The general reaction has been a demand for something simpler-for a set that the average man, not an engineer or even an advanced experi-menter, could construct and operate suc-cessfully. To which, one might well reply, 'Well, don't build a super. Con-struct something with less tubes and less necessity for accuracy.' Which is all very well but the fact remains that every-one seemingly wants a super-heterodyne. With all this in mind. Radio Digest would fill the bill, one that would com-

Fixed mica condenser, .0001 mfd. 1.80 1.10 .60 mfd. 1 Fixed mica condenser, .002 mfd. 1 Panel, 7x30x3/16 1 Baseboard, 9x29x¹/₂ 7 Binding posts Bus bar, spaghetti, screws, solder lugs .35 .40 5.25 1.00 .40 2.00\$78.00 .\$25.00 8.00 . .40 28.00 15.00 \$76.40

bine good looks and efficiency with low first cost and ease of assembly, with the mphasis on the last point. With the "simplest possible" thought in mind let us consider what is essential to a super-heterodyne. This type of receiver was developed to get around certain inherent disadvantages of vacuum tubes as they are now generally constructed. Tubes do not efficiently amplify or build up incoming Radio waves at the compara-tively low wave lengths used by Radio-costing stations. We therefore, with an-other tube, create a new stream of energy at a wave length closely approximating that of the incoming program. The two length which is much longer and far more efficiently handled by the tubes.

Loud speakers range in price from \$8.00 to \$50.00

<text>

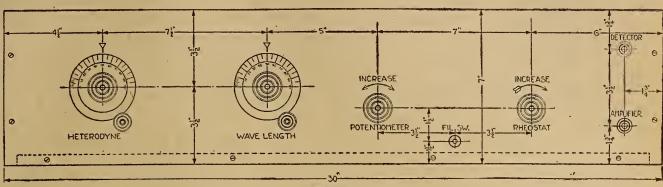

Figure 1

_ONIA

Trade Mark Reg.

CO

while less than this would be not taking advantage of all the strengthening pos-sible. Some means of coupling tubes to-gether is always necessary and trans-former coupling has been found both simple and highly satisfactory. So, we couple the tube in which the waves were mixed, to the first amplifier with a trans-former, which is known as a "filter coupler," because, since one winding of this transformer is tuned with a fixed condenser, the transformer has the

COLONIAL is a new name in American radio. Behind its products, however, are two of the best radio engineers in the world—Dr. Fulton Cutting and Mr. Bowden Washington. The receiving sets designed by these engineers have an international reputation and their two latest models—the Colonial 16 and 17—are in refinement of design and performance, "abreast" of anything now available to the radio public. Both types are beautifully housed. Cabinet by Brewster—the first time the design experience of the famous automobile body builder has been available to the radio public.

Introducing

An enormous amount of thought has been put into the detailed design and it is believed that many small annoying defects which have been learned in ten years of radio manufacturing have been entirely eliminated. This means that the set will arrive in the customer's hands intact, and stay so.

The Colonial 16 is a five tube, dry battery operated receiver. The Colonial 17 is a four tube, dry battery operated receiver. Both employ tuned compensated radio frequency—a special Colonial achievement providing uniform response. They are extraordinarily selective, can be logged accurately, have fine volume of excellent quality and are extremely economical in operation.

COLONIAL POLICY

The basis of any sell-ing policy can be no more sound than the product which the policy is devised to merchan-dise.

The two COLONIAL Models, now available to the trade, insofar as the basic design of the cir-cuits is involved, are engineered in a detailed way, we think, more carefully and completely than any receiver on the market today. COLON-IAL receivers, we know and are willing to prove, more completely meet the performance desired by the radio audience than any other receiver so far produced. Selec-tivity, sensitivity, stabil-ity, uniform response, faithful reproduction, through perfect mechan-ical design, are incor-porated in COLONIAL receivers and the utmost in reliability is obtained.

COLONIAL'S manu-facturing policy is to conduct our factory, from the engineering labora-tory down to the ship-ping room, in such a manner that every piece of COLONIAL apparatus which leaves our hands will be received by the consumer perfectly de-signed, painstakingly constructed and 100% cfficient in the work for which it was designed. To obtain this result means the most scrupu-lous inspection at every step of assembly. This inspection is continually under the personal su-pervision of Dr. Fulton Cutting and Mr. Bowden Washington.

JOBBER POLICY

Exclusive franchise and absolute territorial protection are two of the outstanding features of what COLONIAL will

A SPECIAL INVITATION

is extended to jobbers and dealers in attendance at the Chicago Radio Show-November 18th to 23rd-to visit the COLONIAL Booth and see the first public display of COLONIAL 16 and 17.

COLONIAL

pollicity give its jobbers or dis-tributors. We believe the jobber is entitled to this protection from the manufacturer. We believe he is en-titled to full credit for any "direct to dealer" vales which might be made in his territory. We believe that the job-ber who can handle his territory profitably for himself, his dealers and for the factory, should be afforded these protec-tions. Consequently, as territorial limits are de-fined, there will be but one jobber in that terri-tory enjoying COLONIAL franchise and that job-ber will, at all times, have behind him every available resource of the COLONIAL manufactur-ing organization to as-sist him in getting the maximum amount of business out of his terri-tory.

^{*} **DEALER POLICY** In addition to render-ing the jobber the clos-cost possible sales co-operation, COLONIAL has developed a dealer cooperative sales service that is unique and that is sure to be of signal importance to the retail will offer direct to the dealer, through the job-ber, this sales plan, per-sonally supervised and inaugurated by COLON-IAL "dealer salesmen" which we know will at once be recognized as being the best, most di-rect and efficient manner of securing sales that as as yet been devised tor radio. We have prepared our plan in the form of a pokelet. You should se-cure your copy without dealey.

Super-Radio

No Obstacle to Larger Developments

No Obstacle to Larger Developments WE ARE entering an era of super-everything and now comes the super-broadcasting station. The annual conference recently held in Washington makes it clear that there is going to be startling developments immediately along this line. The con-ference has gone on record as favoring freedom to increase the power used, and the government is not disposed to interfere except for purposes of prevent-ing abuses and adjusting disputes in the Radio field. Small stations, using low power for local broadcast-ing, are to be protected, but there is no needless obstacle to the larger development of the art. The typical station of the future, it appears, will

The typical station of the future, it appears, will use many times the power now used, and therefore have a broader range. Moreover, in order to make the powerful stations function most efficiently, and keep them from making themselves a nuisance in their vicinity, they will be located not in the cities but outside of the cities. Broadcasting studios will probably be located in business centers, as they are now, but the programs will be carried by wire to the sending stations out in the country. This should work very well but it is largely ex-perimental. Radio innovators have to feel their way, and it is not sure yet whether super-power will be desirable or not. The coming year will tell, and also will determine the future of national broadcasting by means of inter-linked stations.

Set Must Be a Thing of Beauty Trimmings Add Dignity to Your Receiver

IT HAS not been so very long ago when a receiving set, especially those rigged up for distance work, had its equipment laying about on tables and work-benches. Wires and batteries lay about in a maze of disorder and the Radio corner was the pet griev-ance of the housewife, unless she banished it to the attic or garage.

Thanks to daddy time those days are gone. Sets are now marvels of neatness. In the past few months there has been a decided trend toward the artistic side of set building and mounting.

side of set building and mounting. The same process, the development of the phono-graph. Those with long enough memories can recall when the phonograph was a collection of wheels and cylinders, mounted atop a post and equipped with rubber ear pieces that were thrust into the ear openings like a bathing stopper. Then came the big old-fashioned floral horn and later the contained cabinets that are now almost universal. When hundreds of keen minds are constantly seek-ing betterments, they come faster than if only a few are hunting them.

Radio and Advertising

Will the Radiophans Listen to Publicity Propaganda? S ERIOUS discussion is arising in places regarding the opportunities for misuse of the Radio in adver-tising or publicity. Part of the business of codifying the use of Radio will be that of fixing responsibility for utterances. Who is it that is broadcasting? What is his interest in the effect of the publicity given?

The public is not much interested in whether some-one is paid for the cost of advertising by Radio. It is interested in knowing whose desire, whose impulse is

Interested in knowing whose desire, whose impulse is causing the publicity. Display advertising, whether in papers or magazines or other publications, usually has a form that brands it as interested. The publicity that does not have the form is now considered deceptive. Can interested Radio publicity be given a "form" that will show what it is?

In the course of time, it will be possible to fill the air with statements, implications, pleadings, for the benefit of one cause or another. This may be to the public's advantage providing only that the individual or organization that is back of the pleadings or arguments is known.

RADIO INDI-GEST

There's Music in the Air

Dear Indi: I'm sending you a little ditty, I trust you will like same. If you care to have it gratis, there's nothing else I'd claim. I read your Radio Digest, each line with thought and carc, It amused me very much, perhaps you're not aware.

Last night my mood got the best of me, as sure as I was born. A lonesome feeling crept over me, I felt depressed— forlorn.

So to change my frown into a Radio, Radio, Before I had a chance to think, I heard the grandest

When I want music while I dine, I don't go very far, I turn my dials to the forties, and get Station WOR. If you want your soul to touch cloudland, as if you'd plainly see, Just turn your dials to the fifties and listen to WJZ.

When I want to be in dreamland, as if in a cozy den, My life is changed into a joyous play, listening in on WHN.

Then come moments you want to be amused, there's no one to speak or say, So I find peace and rest, listening in on KDKA.

How about your baseball fans, don't you get a laugh and thrill,
Tuning in WOR and listening to our friend, "Jolly Bill"?
If you want your heart to be filled with constant ecstacy,
Turn your dials to the seventies and listen to WNYC.

You don't have to long for gay Paree, and keep your

cabaret, I keep my feet in trim listening to WEBJ. You can keep your distant stations, to get Chilly I almost fear, Life is sure worth while living, if there's music in your ear. JUST A RADIO FAN. Life

THE THIRD TROMBONE PLAYER.

Another Girl Gone Wrong

Another Girl Gone Wrong Dear Indi: Aspirin, our colored cook, has quit, stopped and desisted. No more will her effervescent pancakes permeate their melodious odors through the upper halls whilst we scrub our teeth rid of the dark brown taste. Never again will her brobdingnagian form get jammed between the normal-sized kitchen door frame. Why, oh why, did she resign to fry eggs for the Smith's? We know but what our confidential sleuth hath reported: that we have a crystal set and the Smith's use six UV's. SPIDER WEB.

Condensed **By DIELECTRIC**

Following a futile search for something unusual my dials hit the wave of KSD, which brought in the music of bands in the street carnival at St. Louis. Mo. Coupled with the cheering of the crowds, short explanatory remarks from that stations' well known announcer, you felt inclined to join in the fun-and would, except for the two months' old youngster asleep in the room.

Boasting or boosting? Chicago stations were boost-ing Illinois stock when they described the advantages the state had to offer. They were rightfully boasting when reference was made to the new stadium and grounds surrounding it. Mikes give others a chance to tell, and you the opportunity to hear, of things about which you know little, perhaps.

Let's have the Welsh choir again that entertained through WSAI.

From WEAF's assortment I choose to mention the Gypsy string ensemble, a well drilled group of mu-sicians, and the Penn Harmonic Male quartet, each member of which is possessed of a trained voice.

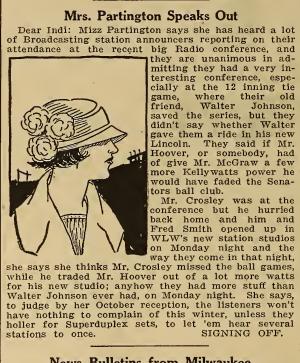

Nationality plays a part in the degree of interest aroused in a singer or public speaker. That alone would have caused many listeners to tune to WLS when they presented two artists, a Yakima Indian and an Eskimo—vocalist and pianist respectively. But when I listened to these men the impression was one of disappointment; the Indian sang faultless English songs and his accompanist lacked the frigidity of the North land. Their work was applauded both in and out the studio.

Most of us Radiophans know of Beban, the actor and playwright. Possibly not so many have witnessed his unusual characterizations, yet his talk from the studio of WHAS disclosed to some extent the per-sonality of the man. It is always a feature of interest to bring to Radiocast stations people whose work is of a public nature. Mr. Beban's closing remark, "I want to hug everybody," shows the advantage of Radio Radio.

WBZ gave us some very good musical entertain-ment during a program of French songs and addresses, commemorative of some date in history that. I can't recall. Especially pleasing was the singing of Massenet's "Elegie." This is not a selection to be sung in a perfunctory style and be interesting, which the artist fully appreciated.

Then away down in Atlanta, Ga., the First Presby-terian church organ was the medium by which many a listener was held to the dial setting of WSB. A good organ, capably played, and selections ranging over the various stops and combinations thereof made one feel the time spent in "Atla-anta, Georgia" was well spent.⁹

I lost my ticket temporarily that was to take me on the long trip KDKA is conducting. However, it was recovered in time to rejoin the party for the visit to the Taj Mahal in India, one of the most beautiful buildings in all the world. The musical accompaniment to this travelogue was peculiarly fit-ting on this occasion. Why not arrange to make a trip via Radio to points of interest in the United States?

NOTE THE BANJO AT WGR NEXT MONDAY

Note the determined expression on the face of Joe Roberts as he lovingly clasps his banjo to him. Joe is awfully fond of banjos. Just how fond he is of it can be understood by tuning in WGR at Buffalo the week of November 17, when the Vin-cent Lopez Hotel Statler dance orchestra is on the air (see the Digest program for WGR) and listening to him pick this banjo. Harold Gieser, the director, will feature Roberts that week. Colegrove Studio, Buffalo.

Secrets of Selectivity and Regeneration

Part V-Conclusion; General Principles to Remember

By William W. Harper

C₃

I N THE articles which have preceded an attempt was made to present the influence of the more important fac-tors such as high frequency resistance and extraneous coupling, upon the re-generation and selectivity. In all cases the data given was based upon one stage of regenerative Radio frequency ampli-fication. The more elaborate arrange-ments may also be subjected to similar analysis and the same principles can be applied. The second article disclosed a method of improving both selectivity and response

0000

analysis and the same principles can be applied. The second article disclosed a method of improving both selectivity and response by the use of more than one sharply tuned circuit. A receiving system con-sisting of one regenerative amplifier with two tuning circuits was described. It is well known that the degree of selectivity can be further increased by the utiliza-tion of more tuning circuits. Such an arrangement is shown in Figure 12. In a system of this order the circuits LC and L1C1 are both adjusted to the condition of critical regeneration by utilizing the optimum number of plate coil turns in La1 and La2 respectively. This adjustment is made as described in the latter part of the third article. The detector tube is strictly non-re-generative; that is, the circuit L2C2 is not regenerated by energy from the de-tector plate circuit. It has been found that only a very slight increase in selectivity occurs by using regeneration in the detector and if critical regenera-tion is used in the precedent amplifiers, nothing is gained in responsiveness. Assuming the selectivity of a receiver comprising one tuning circuit to be as represented by the resonance curve num-ber one in Figure 13, the increase in selectivity due to the addition of a second and third tuned circuit might be pictured as shown in curves 2 and 3 respectively. With only one tuning circuit it is noticed that a certain station is heard

Figure 12 From 250 meters to 550 meters. A local station on a non-regenerative set with one tuning circuit frequently gives set with one tuning circuits frequently gives to set with the limits shown by curve 2, namely 325 to 475 meters. The greater amplifica-tion. Curve 3 illustrates the condition when a two stage tuned Radio frequent and to exact resonance (in this case 400 meters) re-sults from the regenerative amplifica-tion. Curve 3 illustrates the condition when a two stage tuned Radio frequents the condition amplifier is used embracing three sharply tuned circuits. The spectrum of the rease in selectivity is not proportional is, after the second or possibly the third stage amplifier, is added a further in-rease fails to appreciably improve the selectivity. For the home builder, it is necessary

CONNEWEY ELECTRIC LABORATORIES New York City 309 Fifth Ave.

MAGNATRONS THE improved MAGNATRON available to you today knows no equal in the vacuum tube field. It is the most sensitive detector,

the most powerful audio amplifier and the most stable Radio amplifier we have ever developed. The improved MAGNATRON far

surpasses even the original MAG-NATRONS upon which we have built our reputation. That, in itself, is saying enough.

The improved MAGNATRONS are tipless. This feature prevents breakage. The price is low. The MAGNATRONDC-201A, the MAGNATRON DC-199, and the MAGNATRON DC-199 with large base all list at only \$4 Your dealer sells them!

SELECTIVITY SECRETS

SELECTIVITY SECRETS (Continued from page 27) The use of low loss coils is recom-mended. A plain solenoid coil wound on a cardboard tube with double cotton covered wire is very satisfactory. A coil of this type is often more efficient than many of the more elaborate and "so-called" low loss inductances. The am-hitious experimenter can do better by building basket weave coils or by spaced windings. Cardboard tubing is slightly more efficient than hard rubber and bake-lite for use as coil supports. In any in-stance the use of skeleton forms for the coil supports tends to improve the electrical characteristics of the coil, but experimental work in regenerated eircuits operated at frequencies within the broad-casting band indicates that the actual gain hardly warrants such construction. For this reason the experimenter will do well by using a simple and carefully con-structed solenoid on a paper or cardboard support. Empregnating Solution

well by using a simple and carefully con-structed solenoid on a paper or cardboard support. Impregnating Solution An impregnating Solution for coils con-sisting of celluloid dissolved in anyl acetate can be used with no harmful effects. With this preparation the high frequency resistance increase is prac-tically immeasurable and the distributed capacity is increased by a very unim-portant amount. One of the most imperative things about the construction of any receiver is to keep the coils as far away as possible from both metallic objects and dielectric material. Great effort has recently been put forth to increase coil efficiency and some very good improvements have been made, but the Radio public will not benefit from this work until a complete understanding is reached in regard to the proper utilization of good coils. Many experimenters, and even commercial de-signers apparently ignore the fact that a condenser or metal tube socket in the concentrated field of a eoil is capable of increasing the losses in the coil by as much as one hundred per cent. An edu-

Make Big Money Selling Radio 02APK Instruments Let Me Show You How I Have Enabled More Than 2000 Men to Start a Good Paying Business of Their Own

50

The Ozarka Plan is the first and only one of its kind which enables the average man to start a manufacturing business of his own and pay no one any unnecessary proft. It will give the right kind of a man an opportunity to get on his feet even in his spare time, and establish him self in a permanent and profitable business of his own. J. MATHESON BELL President

The man I am looking for is not a "floater." He has a good position and he has held that position for some time. He is well and favorably known in his community—he is honest, hard working and industrious. He may not have much money—he is not completely broke and looking for a job. Generally he has a family and wants to do the best he can possibly do for that family.

During the past three years I have shown over two thousand men how to get "out of the rut" —how to pull themselves up and get on their feet. I am satisfied I can do this for you, or any other man, if you are willing to do your part. The public is buying radio instruments more and more every day, and yet in this won-derful businessthere is a field wide open for you.

Our entire plan of selling is described in a large illustrated book "The Ozarka Plan." This book is free for the asking and, for any man who is determined to improve his condition, it will no doubt be just what he is looking for. It has been the turning point in the lives of a great many me—it will mean the same to you. At any rate, you will enjoy reading it, because it is a story of men, a story of their successes and failures. It proves why some men fail while

The man I am looking for is having a hard time making ends meet. He is willing to learn-willing to try and try hard, if he can only be shown and given a helping hand to get started.

UST as sure as you can show me that you are the right

J kind of a man—that you have ambition and spunk and are determined to better your position and condition in life— just that sure am I that I can show you a plan whereby you can make a success in this new field and reach your goal.

Radio has grown from nothing within three years to be one of the greatest industries in this country. I am satisfied I can show you a plan whereby you can make big money in terri-tory not already covered, as I have with thousands of others.

d to get started. others succeed. It shows clearly why a few men in this country are the employers of mobs of men who are toiling daily to make millionaires out of a few. Thousands of men have written me and stated that this book is the most wonderful story they have ever read. After all, it is the story of my-self and the Ozarka organization, who have started from absolutely nothing in this world and pounded our way to success. I know that this book will be a revelation to you, and yetit is only a question of writing me a letter and telling me about yourself-tell me what you have done—tell me what you are now doing —and ask for Book No.100. In doing so however don't The

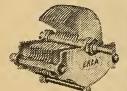

In doing so, however, don't fail to give the name of your county.

your county. The Ozarka Plan has been a very expensive book for us to publish, but nevertheless we will gladly send it to any man who feels that there is still an oppor-tunity left for him to gct what he wants.

Buatanter Erla Solderless Connectors make child's play of receiver construction, eliminating difficult soldering entirely.

Build Most Efficient Circuits By Methods Most Advanced

from noiser freedom fro nguish Erla Rh stat, \$1.10-

A thousand and one circuits have been dangled before the radio amateur. Erla engineers, from the first, dedicated themselves to creating those circuits with the inherent superiority to remain in the forefront of radio advancement.

From this fixed purpose came Erla Duo-Reflex Cir-cuits, most powerful in radio, tube for tube. Now research and development have intensified every original Erla advantage in the latest Erla circuits. ranging from one to five tubes, in loop and antenna models. Beyond present Erla perfection it is not possible to go in range, volume, tonal purity, selec-tivity or ease of control.

These finest circuits are now also easiest to build! Available in factory-sealed cartons, under war-ranty, are the complete Erla Knockdown Receivers, ready for truly professional assembly, by anyone who has handled pliers and screw-driver.

Erla precision apparatus, vital to matchless Erla results, is furnished complete, right down to Erla solderless connectors which banish soldering. The panel is drilled and lettered, while the baseboard is stenciled, correctly locating every unit and connection.

You yourself, therefore, can construct the most ad-vanced radio circuits, by the most efficient and most economical method, confident that your receiver, sponsored by Erla, is unsurpassed. Ask your dealer about Erla Knockdown Receivers, or, if writing direct to us, give dealer's name.

Batteries, Their Use, Abuse, Care and Upkeep

Part III—Construction of a Storage B Battery

By William Fenwick

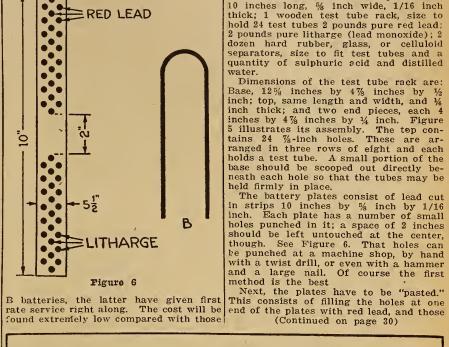

the batteries. Use a grid, or C battery on the audio-is decised equency amplifier. As current is flowing in the circuit as Eve

To measure the voltage of a B battery, Radio enthusiast should adhere to these few simple rules: Use the lowest A and B battery voltages which will give the results you want, and also as few tubes as possible, for each the batterics. Use a grid, or C battery on the audio-frequency amplifier. As current is flowing in the circuit as

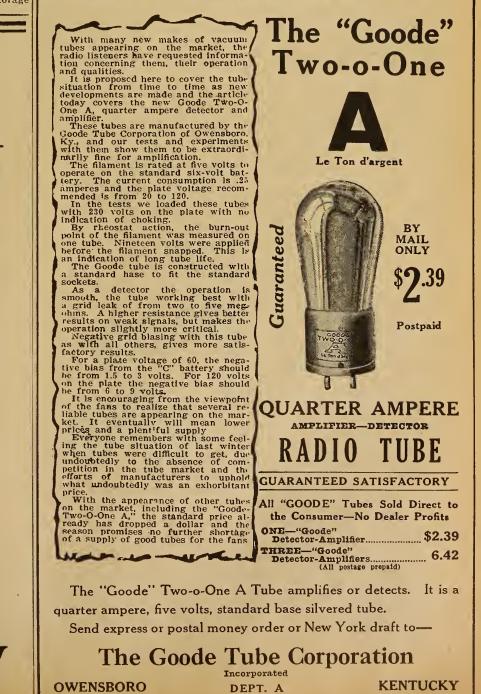

ohms. Even if a B battery has become 'ex-hausted, a part of it is still useful. All cells never go dead at once, so it is quite possible to make use of some. To do so, remove the covering that encloses the cells, disconnect them with a pair of wire cutters, and test each separately, throw-ing away the defective ones and keeping the active. They may be put to a number of uses, such as stepping-up another bat-tery a few volts, or forming a C battery by connecting 4 or more in series, etc. Many more ways in which they can be utilized can be thought of by the thrifty Radiophan. Construction of a Storage B Battery

this is a solution of a storage B Battery The disadvantages of the dry cell type of B battery are quite numerous. One faulty cell in its makeup will produce a goodly amount of "noises;" it is also impossible to get at the particular cell without first tearing the battery to pieces. Neither decreases very rapidly. Whereas with the storage battery most of the drawbacks experienced with dry batteries deteriorate when left in a hot or damp place; that they should be kept well ventilated; that they should be kept well ventilated; that they should be used in the Radio frequency, detector and audio frequency.

at present on the market, for it does not exceed that of the common 45-volt dry battery. The materials you will need to make a 48-volt storage B battery are: 2 dozen soft glass test tubes, 5 inches long, ¾ inch in diameter; 2 dozen strips of lead, 10 inches long, ⅔ inch wide, 1/16 inch thick; 1 wooden test tube rack, size to hold 24 test tubes 2 pounds pure red lead; 2 pounds pure litharge (lead monoxide); 2 dozen hard rubber, glass, or celluloid separators, size to fit test tubes and a quantity of sulphuric acid and distilled water.

The following article taken from the Sept. 23rd issue of the Camden (N. J.) Post-Telegram shows what their Radio Editor thinks of

CARE OF BATTERIES

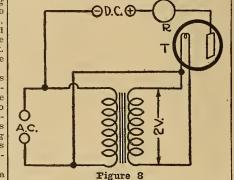

(Continued from (Continued from page 29) at the opposite end with litharge. Defore either of these powders can be used, they have to be made into a paste. This is done by mixing them, scparately with slightly diluted sulphuric acid until they are of about the same consistency as putty. When handling sulphuric acid, the builder should always exercise the utmost care, for it is poisonous and corrosive. In diluting the acid, it must be slowly added to the water; never under any con-dition do it the reverse way. The paste of red lead is tightly packed page 29)

N i 12 3 Figure 7

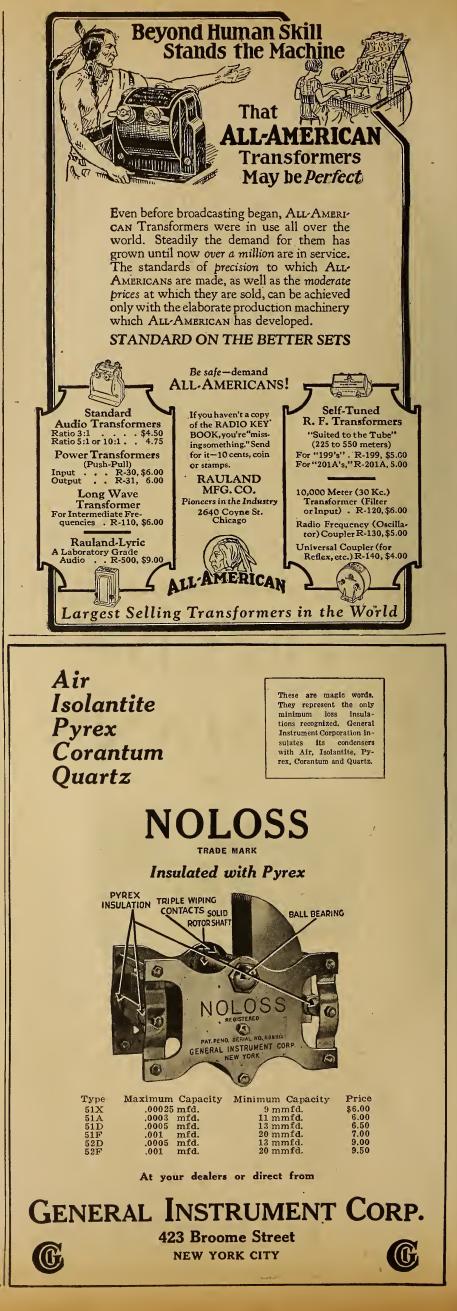

Figure 7 into the holes at one end of all plates, and the litharge paste into the remaining holes at the other end. It is advisable to place the plates on a smooth, level surface. such as glass, when pasting them, and force as much paste as possible into the holes, using a manicurist's orange stick. The plates are then bent into the shape in Figure 6B. Now is when the main difficulty arises in building this kind of battery. It is al-most next to impossible to prevent the paste from falling out of a few holes. To overcome this, many recommend the bat-tery being charged as soon as the plates have been pasted; others prefer letting the plates dry first. The writer let his stand for about four days with good re-sults.

stand for about four days with good re-sults. Separators are inserted in each test tuba so that the plates can not come together and cause a short circuit. These may be made of hard rubber, glass, celluloid, fruit-basket wood (that has been boiled in paraffin) or any other insulating material that is not affected by the electrolyte. Excellent separators can also be made from moving picture film, that has had

RADIO DIGI the chemicals removed from its surface by soaking in hot water, and cut into strips around 7 inches long. The details of how the test tubes, plates, and separa-tors are mounted, is clearly shown in Figure 5. Bach test tube is filled to within an inch from the top with an electrolyte of a 20 percent solution of sulphuric acid and pure distilled water. Remember the water only in the solution evaporates, the acid does not; merely add distilled water but never acid as the action of a storage B, battery, both should receive about the same attention. A top view of the battery is in Figure 7. L indicates the litharge ends, and R the red lead ends of the plates; J are the lead jumpers which make connection be-tween each row and the one preceding. On plates marked P and N, binding posts can be mounted instead of soldering wires to them, as it is more convenient when connecting or disconnecting it. Terminals can also be mounted on the ends of each row of test tubes if a variable voltage is desired. Each cell gives two volts, thus 24 will produce 48 volts A sediment will gather at the bottom of each test tube in the course of time and should be removed before it piles up high enough to touch the plates or they will be short circuited. The B Battery Charger In Figure 8 is the electrical wiring dia-

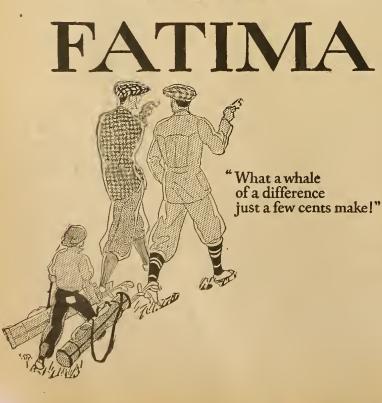

Liggett & Myers Tobacco Co.

They're all alike except for one thing

All cigarettes light quickly, draw easily, burn freely and are filled with pure to-bacco. They look much alike, are nearly all of one size and every last one of them produces "smoke." Then why pay more for one than another? You'll know just as soon as you light a Fatima.

Helpful Hints to Get the Most from Radio

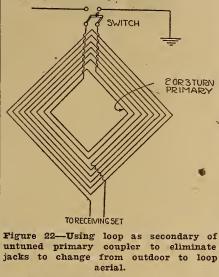

Chapter IX-Use of Jacks and Switches in a Set

By Thomas W. Benson

IN THIS series of articles set opera-tion will be told in so simple a man-ner that the uninitiated can follow in-structions and get the most out of re-ception, whether or not he knows anything about electricity or its applica-tion to broadcasting and reception. The series consists of thirteen chapters, of which the four next will be:

chich the four next will be: Chapter X—Amplifying the Signals. Chapter XI—Care of Radio Bat-teries. Chapter XII—Telephones and Loud Speakers. Chapter XIII—Hints on Tuning.

<text><text><text><text> Figure 21.

The effect of using a plug and jack to plug in a loop aerial is to shunt a small capacity across the tuning condenser. The condenser formed in the plug particu-larly has high losses because of the dielectric present and affects the sharp-

The newer types known as anti-capacity iacks have a lower capacity but even <u>EXAMPLE OF CAPACITY BETWEEN</u> <u>SPRING</u> <u>SPRING</u>

primary or switching it in as shown in Figure 22. Use for Plugging in Phones Since the capacity of the jacks and plugs is small it will have little effect upon the lower frequency currents found in audio frequency amplifiers and their use for plugging in phones or talker is permissible without loss from capacity effects. The question of leakage and poor contacts becomes important. Leak-age in a jack may be due to inferior insulation or more often careless solder-ing of connections to the jack terminals. A jack insulated with fiber strips may work perfectly under certain conditions but the fiber may absorb moisture and thus form a conducting path between the springs. When soldering, the flux may splatter from the hot iron or if too much is used, flow over the strips and partially short the jack. Both these causes of leakage can be eliminated by the use of a jack requiring no soldering and that is insulated with bakelite. A leaky jack usually causes a scratchy or frying noise in the receivers with a decrease in signal strength. Any losses from leakage would have a greater effect in lowering the efficiency of a set where

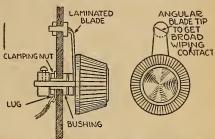

Figure 23-Cross section of an efficient switch.

found mostly on the manufactured sets. They add a touch of refinement and are entirely satisfactory if they meet the requirements of a good jack in all other respects

requirements of a good jack in all other respects. It is extremely important that all jacks in the audio stages be connected alike, that is, the spring making contact with the tip of the plug should be connected to the positive of the B battery. The phones are then connected into the plugs with the marked cord going to the tip of the jack. If this method of connect-(Continued on page 26)

Simple Homemade Selective Receiver

Hook-Up That Pulls in **Distance and Volume**

If there is any reader of the Radio Digest that wants to build a cheap, simple but a very selective set, here's one that is worth your time trying. The parts

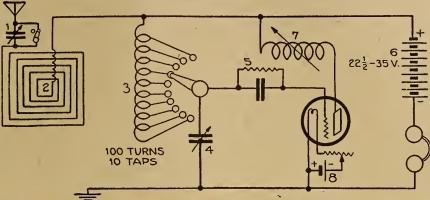

WORKSHOP KINKS EARN A DOLLAR-

THERE are many little kinks worked out at home that would aid your fellow Radio worker if only he knew about them. There are new hook-ups, new ways of making parts and various unique ways of oper-ating sets that are discovered every day. Radio Digest is very much inter-ested in obtaining such material. Send them in with full details, including stamped envelope, so rejected copy may be returned. The work must be cntirely original, not copied. RADIO KINKS DEPARTMENT Radio Digest, 510 North Dearborn St., Chicago

used for tuning are two 23-plate variable

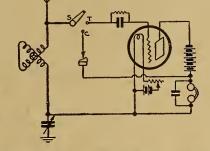

used for tuning are two 23-plate variable condensers and at present I am using a 180 degree variocoupler, with a winding of 100 turns and 10 taps. Of course any coupler may be used. The switch arm across the aerial condenser is to cut it out or in as desired. The loop shown in the diagram is not absolutely necessary but I have found that it works best with it. I have used both WD-11 and 12 tubes and both worked equally well. I have been using from 30 to 40 volts on the plate, 22½ will work very well. After the set is goods but if it doesn't work go all over the set carefully with the diagram. I have been getting very good results, picking up KGO, Oakland and KDKA, East Pittsburgh, and several northern stations come regularly with wonderful olume. I have a small Murdock loud speaker and have gotten KFKX, WFAA, WHB, WBAP and WMC on it with one out although they come in with a roar. The diagram is self explanatory and very simple to hook-up. This is a very sodol little set and it will certainly bring stations in clear and loud if properly built and properly operated. — George Ross, Houston, Texas.

Wire for Spider Web Coils Double silk covered wire is preferable for spider web and bank wound coils, as it affords satisfactory insulation, and also a saving in space. Double cotton covered wire is also satisfactory, but it requires slightly more space. slightly more space

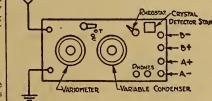

1 is 23-plate variable condenser, 2 is loop aerial, 3 is 100 turn on stator, 4 is 23-plate variable condenser, 5 is grid leak and .005 condenser, 6 is B battery 22½-35 volts, 7 is rotor of variocoupler and 8 is dry cell.

Crysto-Tube Set Reception from local broadcasting sta-tions is in most cases obtained with suf-ficient volume on a crystal set. However,

to receive distant stations with any regu-larity, a tube set is necessary. A simple set combining the advantages of both a tube and crystal set can be constructed of a few parts, and can be so connected that reception on either one of the two detectors can be accomplished by a single

movement of a contact switch from one point to another. The hook-up of this "crysto-tube" set

Make Your Selection Carefully

from among only a few of the better receivers. Consider among these the Pfanstiehl Model 7 receiver. You will always appreciate the suggestion.

- 1. Matchless reproduction
- 2. Extreme selectivity
- 3. Unusual simplicity
- 4. Simplest tuning
- made possible by the Pfanstiehl Station Selector.

Your dealer will be pleased to demonstrate these features.

LOOP USED WITH OUTSIDE AERIAL

is given herein, showing the position of the switches in the circuit. The letter T shows the contact point for the tube operation and C the contact point for the crystal circuit. The panel layout is shown in the second illustration.—George F. Liuppold, Washington, D. C.

Lamp Cord Aerial

Lamp Cord Aerial When you have electric lights in your home twist a length of single cord around the table lamp cord for 5 to 8 feet, or whatever the length may be, leaving one end open, the other end goes to the aerial post of the receiving set. I have an aerial outside that is 175 feet long including the lead in, but the short length of wire around, the electric light wire gives as good results as the outside aerial—Chas. E. Green, Worcester, Mass.

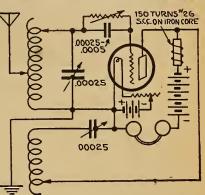

Short Aerials Best

Short Aerials Best Very long aerials will not bring in loud signals from broadcasting stations. Aeri-als over 150 feet in length make tuning more difficult, give weaker signals and bring in more static. More than one wire will not increase the effectiveness of your aerial, except in the case of exceedingly short ones—say 20 feet in length.

Use Arresters for Safety A Radio aerial is not so much of a fire hazard as it is sometimes reported to be. This is not meant to indicate that light-ning arresters are not worth while for protection of the Radio apparatus, how-ever. If you have a good protector the house and instruments are as safe as if you did not have a Radio at all.

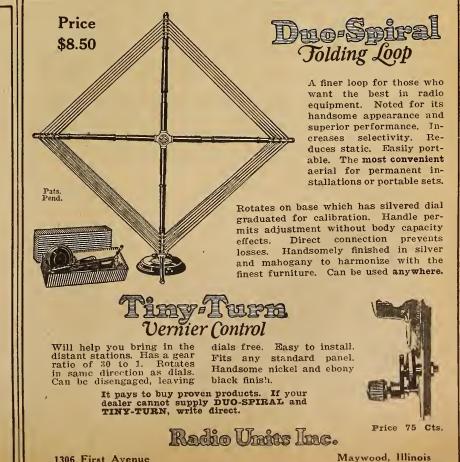

Reinartz Coil Based on **Old Weagant Circuit**

Some time ago there appeared in Radio Digest a Reinartz hook-up by C. T. Han-avan and I have tried this circuit with good results, but with the tickler coil placed as shown in the accompanying diagram I obtained much better results. This arrangement is based on the original Weagant circuit. This hook-up gave louder and greater distance signals than the straight tickler coil arrangement of the Reinartz circuit. The greatest improvement was in the ease with which the set could be controlled once the proper size of tickler coil was found. The only trouble that was experienced in building the set using this circuit was to find the correct size of the tickler coil. The exact number of turns on this coil must be found by experimentation, as it varies with the design of the set. But in most cases it will be found necessary

to have more turns on the tickler than is generally used on the straight Reinartz set. Do not give up on the first tryout because the set will work and it will be well worth the effort used in experi-menting with the tickler coil.—Earl T. Denton, West Chester, Pa.

Proper Tools Necessary When building a receiver use tools that are designed for that purpose. Don't buy a pick ax and sledge hammer and think that you are going to build an efficient set. Several sizes of screwdrivers are usually necessary, and purchase a pair of long-nosed pliers to use when working around the corners in your wiring. If you purchase a soldering iron don't buy a big, heavy, cumbersome iron, but purchase one that is thin, which will enable you to reach into the corners to solder your con-nections. Handle your receiver with care when putting it together, as it is a delicate piece of apparatus.

1306 First Avenue Perkins Electric Ltd., Montreal

34

Continued from page wave length, and falls off rapidly on each side of this point. This point is known as the "peal: efficiency," and since we naturally want all the strengthening possible, our filter coupler is designed to pass this wave length and we mix the incoming with the oscillator frequency to produce it

incoming with the oscillator frequency to produce it. In order to separate the audio fre-quency component of our energy from the Radio frequency currents, a detector is necessary, so the signals are passed from the last Radio frequency amplifier stage through one of the long wave trans-formers into a vacuum tube equipped with grid leak and grid condenser and operated to rectify and detect instead of amplify. Since the Radiocast energy has been so tremendously increased by our three long wave Radio frequency amplifiers, it enters and leaves the detector so strong that only one stage of amplification at audible frequencies is necessary. This single tube is coupled to the detector by an audio frequency transformer in the usual way now familiar to most fans. **Two Tuning Controls**

single tube is coupled to the detector by an audio frequency transformer in the usual way now familiar to most fans. **Two Tuning Controls** On the panel then, we require only two tuning controls, the variable con-densers and two subsidiary controls but seldom touched, the potentiometer and rheostat. Considerably better selectivity will result if variable condensers of the low-loss type are used, with metal end plates and small strips of insulating fma-terial supporting the stator. Within the set we need seven tubes, namely, the first detector or "mixer," the oscillator, three amplifying at Radio frequencies, a second detector and one amplifier at audio fre-quencies. Due to the necessity of match-ing, certain parts of super-heterodynes are sold as a kit, which usually includes an oscillator coupler, a filter coupler and three long wave transformers. There may be other incidentals included such as large capacity condensers; if so, they need not be purchased separately. These kits may be designed to pass a wave length of 2,300 meters, 3,500 meters, 4,600 meters, 6,100 meters, 8,300 meters and even 10,000 meters. Any of these kits are suitable for this super and may be used. The oscillator coupler may not look like that in the drawing, but this point makes no difference as many very excellent couplers are antirely enclosed and do not have a variable rotor as did this one. Too much stress cannot be laid on the use of high-est quality, mica dielectric fixed con-densers, as the writer has found that these condensers are second only to the matching of transformers in importance. **Panel and Baseboard Layout**

est quality, mica dielectric fixed con-densers, as the writer has found that these condensers are second only to the matching of transformers in importance. **Panel and Baseboard Layout** Laying out the apparatus on panel and baseboard is the first thing to be done. It is most advisable to lay out everything on paper first and use the paper layouts as templates for center punching and drilling. The panel layout shown in Figure 1 should be made full size with ine center holes indicated. Condensers and potentiometers and rheostats are usually provided with templates for the plates are pasted on the sheet of paper with shaft center heles carefully placed over the centers indicated in Figure 1. Shielding has not been found necessary in this set, so there are no shield holes to worry the constructor. A similar pro-cedure is followed with the baseboard parts on the paper layout and deter-mine the exact points for mounting srews. It will be well worth while to

LOW LOSS—WHAT IS IT? (Continued from page 20)

(Continued from page 20) The piece of apparatus which should certainly receive attention in the very near future with a view to cutting down distributed capacity is the loop antenna. While one can secure a fair degree of selectivity by the use of a low loss con-denser across a loop aerial and also be-cause of the directional effect of the loop, still the selectivity leaves a lot to be desired. There seems no reason why a loop antenna could not be developed along the lines of a honeycomb coil on a large scale, or similar in design to a spider web coil. Other forms of winding will doubt-less occur to experimenters in the very near future, and when loop antennas even but 10 per cent higher in efficiency make their appearance it will be a real advance in Radio reception. The present types of loop aerial have been in use for several years and it is to be hoped that the same amount of attention will soon be given them that has been given variable con-densers. (Build your own "low loss" inductances.

(Build your own "low loss" inductances. Mr. Fournier will tell you how in his next article of this series.—Editor's Note.)

HOW TO OPERATE SET

Revolutionary ROYALTY Variable High Resistances and the ROYALTY Variable Grid Leaks represent the greatest improve-ments ever made in this field. They are wirewound! This wire winding climinates at one stroke all the common grid leak and resistance troubles. The lever arm cannot scrape away the resistance element. The grid leak and the high resistance are **noiseless** and positively non-inductive. The re-sistance value is retained in-definitely. Your dealer has the ROYALTY Vari-able High Resistance (type B, 1,500 to 100,000 ohms)—type C, 500 to 50,-000 ohms) and ROYALTY Variable Grid Leak (type A, 100,000 to 7,000,-ond ohms).

Ouestions and Answers Will UV-199 tubes function as push-pull amplifiers and what B battery voltage will be necessary?

I have a Reinartz set built from one of your book of specifications. A friend of mine who has a neutrodyne, a few doors

south of me has the same trouble with the street cars interfering. We both get excellent results though after 12:00 mid-

night when the cars stop running, often picking up many DX stations. Can you suggest a method to partially overcome this interference or will one of the wave traps you recently described help in any way?

to minimize the disturbances encountered from cars running in your vicinity is a counterpoise in place of the usual ground. The single circuit regenerative set is not the only offender. A great many other circuits may be made to oscillate.

Push Full Amplifier (9176) JMH, Salix, Iowa. When using the "Push-Pull" amplifica-tion is a separate B battery necessary or can the same battery that is supplying detector and audio tubes be used?

ROBERTS

Street Car Interference (1907) FAP, Springfield, Ohio. Twould like you to give me a little ad-for the subject of interference from street cars. Here is the question, which would like to have you publish in your paper: I am situated close to a street and turns the corner a few doors bout a 45 degree angle with both rolley wires on front and side streets and is located about 70 feet from the bout trolley line. When the street cor-procaches within 2 or 3 blocks of either in the phones or horn until the car has beeched about 7 blocks from the house before the station comes back again. At times I can hear the hum of the motors beached about 7 blocks from the house before the station comes back again. At

be necessary? A.—A common B battery will serve for detector and push-pull amplifier stages. UV-199 tubes may be employed with fair results in consideration of their current consumption and will require probably 90 volts maximum, which is their limit. If volume is a consideration we would recommend that results afforded with the 6-volt tubes will far exceed those of the former.

former.

Sets for Use on Loops Sets for Use on Loops Sets designed for use on an outdoor antenna do not ordinarily work on a loop antenna. To get good results out of a loop antenna, a set should be used that is designed especially for this purpose. Such a receiver contains from one to three or more stages of Radio frequency amplification. For loud-speaker opera-tion at least four or five tubes should be used, unless the receiver is of the reflex variety in which the tubes do double duty.

November 15, 1924 **Special Tool to Remove Insulation on Wires** To remove insulation from a wire cut a V-shaped notch with curved sides in the end of a flat bar as shown in the illustration. For practical purposes a ENDVIEW KS. 0 EVEREADY SCREW HOLES WIRE BEINGPULLED bar of steel 3 inches long, 1½ inches wide and ¼ inch thick will be required. Two holes are drilled below the apex of the slot for fastening the cutter to the **Radio Batteries** Use the NATIONAL CARBON CO., INC. DUCON No antenna—just screw the Ducon into your electric light socket and tune in. A great saving in expense and labor—and great results with your set. your set. PRICE \$1.50 Sold on a 5 day trial basis by all reliable dealers ubilier CONDENSER AND RADIO CORPORA

Two tubes do the work of five

work bench. When an insulated wire is pressed in the slot the sharp edges cut to the wire and its covering is readily removed by a quick downward pull.— Allen Bartelt, Milwaukee, Wis. sometimes come in of low audibility. When signals suddenly take a drop, it is a good plan to check the trouble by get-ting in touch with other Radio listeners before blaming it on the set.

Check Trouble with Other Fans Because of changes in the conditions of the air between the broadcasting sta-tion and the receiving set, signals will

णण Our Type 501A identical with UV-201A Standard size-Detector and Amplifier (5 volts-.18 Amps.) The New York Testing Laboratories, famous the country over, after exhaustively testing the Charilron Tube and comparing it with a standard **High Cost** tube which retails for \$1.00, says that it not only "compares well in general," but that the operating cost of the Claritron is "lower on the average." The Claritron is a safe tube to buy—it is absolutely guaranteed and backed by the exacting tests of experts.

The Claritron average current consumption is only 119 amp-much lower than the standard quarter ampere tube. This is due to the remarkable new financut wire—the heart of the tube—developed by our engineers.

SATISFACTION GUARANTEED OF MDNEY REFUNDED - AND THE \$2.30 PRICE IS ONLY. ALL TYPES TUBES-(same price)-Sent by Parcel Post C. O. D., or Prepald on Receipt of Postal or Express Money Order.

EGEHOG

Puts the Joy in Radio

After all, what is sweeter to your ears than the music from some DX Station coming in on the loud speaker, clear and undistorted? To insure amplification with-out distortion, use the "HEGEHOG." This marvelous little audio transformer, half the size of any other made, is different in design—the most efficient construction known for transformers. It has an ex-clusive self-shielding feature that shuts out foreign noises. Unsurpassed for vol-ume and tone quality. Saves space, mounts anywhere and easy to connect. Ideal for portables.

The Synchrophase needs no extravagant claims.

octor Mu

TRADE MARK

A BROADCAST Receiver that marks an advance in radio design which will stand as a challenge to the industry for a long time to come. Its surpassing craftsmanship is equalled only by its easy, dependable operation.

Greater sensitivity has been gained through two stages of *Balanced* tuned radio frequency—the result of many months of intensive research by the Grebe engineering staff. Extreme selectivity has been obtained by the use of Binocular coils, which are unaffected by impulses from undesired local stations.

The settings for the various broadcast stations are equally spaced over the dials. This is accomplished by S-L-F (straight line frequency) condensers. The three dial readings are identical for a given station.

A new type of volume control gives an unbroken range of six variations of audio amplification.
