Vol. 2 - No. 50  
OCT. 31, 1934

### A NOTE AND AN APOLOGY

After nearly four years of regular service, the weekly reports of the NAB were interrupted this month due to the pressure of work at the headquarters office in connection with the October 1 hearings before the Federal Communications Commission.

Some idea of the size of the task which was presented by the hearings can be gathered from the fact that the testimony and exhibits, when the record is completed, will fill more than 20,000 legal size pages. All of the efforts of the headquarters office were concentrated on the hearings with the result that office routines were necessarily neglected. The staff was handicapped also by the reason of the fact that J. C. McNary, technical director and assistant to the Managing Director, was representing the broadcasting industry at the International Technical Consulting Conference at Lisbon, Portugal, during this busy time.

The NAB regrets the interruption of a service which we have always tried to maintain, and have maintained, on a regular schedule for so long a time. We regret the interruption, we apologize and we promise it will not happen again—unless another job of equal importance comes our way.

### RECESS IN GENERAL HEARINGS

General hearings before the Federal Communications Commission pursuant to the requirements of Section 307(c) of the Communications Act of 1934 to determine whether the Commission shall recommend to Congress that it, by statute, allocate fixed percentage of broadcast facilities for particular types of non-profit programs and to non-profit organizations, which commenced on October 1 were interrupted on October 20 and will be continued on November 7. Beginning with November 7 the Commission will hear rebuttal testimony of the proponents of change and certain witnesses for Government departments which have used broadcasting facilities. It is expected that the hearings will be finally closed before the end of that week.

When the hearings are concluded NAB REPORTS will carry a brief summary of the hearings.

### COMMISSION TO SURVEY ALLOCATION

The Broadcast Division of the Federal Communications Commission on October 30 announced that it will make a thorough survey of the broadcast structure both as to the results of allocation on clear channels and on channels to which more than one station is assigned to operate simultaneously at night.

The announcement was made in connection with the petition filed by a number of clear channel stations requesting a survey. The text of the Commission's announcement follows:

"The licenses of certain clear channel stations petitioned the Commission for an investigation of the service rendered on clear channels and a restatement of the regulations regarding them. The Broadcast Division has decided to conduct a thorough survey of the broadcast structure both as to results of allocation on clear channels and on channels to which more than one station is assigned to operate simultaneously at night. This survey will be made for the purpose of determining the service available to the people of the United States and the type of station that the listeners in rural areas are dependent upon for their service. The degree of interference or impairment of service caused by duplication of certain high power stations is to be investigated, as well

as the possibility of providing additional high power stations without reducing the service to the listening public from existing stations.

"The cooperation of the licensees of all broadcast stations is requested in making this survey. All licensees volunteering their field intensity equipment and personnel to make the observations and measurements should notify the Commission of the facilities which they are willing to place under the direction of the Commission for conducting the survey. The extent and scope of the survey will to some extent depend on the facilities that are made available.

"An informal conference will be held at the office of the Commission in Washington on November 9, 1934, for the purpose of determining definitely the details of the survey and prorating the assignments to the licensees volunteering their facilities. This survey will be made under the strict supervision of the Commission and the measuring facilities of any station accepted will not be limited to measurements on the licensee's station alone, but will be assigned other territories.

"This is the survey generally requested in Proposal numbered (1) by the petitioners.

"The Proposal numbered (2) is dependent entirely upon the survey to be made and need not be considered further. It is obvious that if the information and data secured from the survey indicate that new or amended regulations should be promulgated, they will be considered by the Division later.

"The Proposal numbered (3) of the petition, if granted, would preclude the Division from taking any other or further action with respect to duplicate night time operation on clear channels. It is considered that to grant this proposal would violate the spirit of the law. Therefore, Proposal numbered (3) must be and is denied."

### COMMISSION REVISES QUOTA SYSTEM

The Federal Communications Commission, on October 9, announced revision of rules 109, 110, 111 and 120, dividing the quota due each zone and state within each zone is divided into night and day sections, and the maximum day power on regional channels is increased to 5 kilowatts.

In connection with the revision of these rules the Commission stated:

"Interference caused by stations at night is different from that caused at day. Consequently, the broadcast quota due, the limit of which is interference, has been separated into two parts, 'night quota, and 'day quota.' The quota charge for a station operating both day and night has been divided into two parts, the power and time of operation between 6:00 a. m. and 6:00 p. m. being charged to 'day quota' and the power and time of operation between 6:00 p. m. and 12:00 midnight being charged to 'night quota.' A day station, the operation of which is entirely between 6:00 a. m. and 6:00 p. m. is charged only to 'day quota.'

"The 'night quota' due and 'day quota' due are entirely separate and wholly independent of each other. Applications will be considered in two parts if night and day operation is requested, and the proper quota due considered in connection with each part.

"The 'night quota' due and assigned do not differ materially from the night portion of the present system. The 'daytime quota' due each zone and state within each zone has been increased so that the quota already assigned no longer becomes the limiting factor in many cases to an increase in daytime power of local and regional stations and day and limited time stations on clear channels.

"Rule 120 was modified so that the maximum daytime power on the regional channels listed in this rule was increased to 5000

watts. No other change was made in the maximum power of other classes of stations.

"In increasing the daytime quota due the several states, it is not the intention of the Commission to license additional new daytime stations unless a full showing has been made that public interest will be served in making such a grant. The applicant must definitely establish the need for the additional service, the financial and technical ability to operate such a station in accordance with the Rules and Regulations, and that the station can exist on the basis of the grant requested.

"A survey of the stations in small cities or communities indicates that it is extremely difficult for such stations to operate even though they have full time. The possibility of a daytime station under similar circumstances becoming a success is greatly decreased."

## TEXT OF REVISED FCC RULES

The text of rules 109, 110, 111, and 120 revised by the Federal Communications Commission on October 9, follows:

109. For the purpose of calculating the day and night quota units assigned to each zone and to states within each zone, in accordance with the Communications Act of 1934, Section 307 (b), stations of various powers and conditions of operation are assigned quota units as follows:

A. Power and condition of operation	Quota Units	
	Day	Night
<i>Unlimited time day and night</i>		
(a) Power 100 watts or less duplicated	0.1	0.1
(b) " 250 " " " " "	0.2	0.2
(c) " 500 " " " " "	0.3	0.3
(d) " 1000 " " " " "	0.5	0.5
(e) " 2.5 KW day power only	0.75	—
(f) " 5 KW duplicated night less than 2000 miles	—	0.75
(g) " 10 KW " " " " " "	—	0.90
(h) " 25 KW " " " " " "	—	1.00
(i) " 50 KW " " " " " "	—	1.10
(j) " 5 KW " " more " " "	—	1.25
(k) " 10 KW " " " " " "	—	1.5
(l) " 25 KW " " " " " "	—	1.8
(m) " 50 KW " " " " " "	—	2.0
(n) " 50 KW more or less one station operating exclusively on the channel at night (dominant clear channel stations)	2.5	2.5
(o) " 5 KW day power only all stations except (n)	0.85	—
(p) " 10 KW " " " " " "	1.10	—
(q) " 25 KW " " " " " "	1.3	—
(r) " 50 KW " " " " " "	1.5	—

B. Stations operating less than unlimited time will be assigned quota units according to the proportion of time between 6 a. m. and 6 p. m. and from 6 p. m. to midnight authorized by the license or time-sharing agreement.

C. Any station licensed for a power between the even values given above will be assigned the quota value for the nearest higher power value.

D. In case of operation authorized different from that specified above, the Commission will determine the quota value.

E. Limited time and day stations authorized to operate between 6 p. m. and midnight shall use the quota value in Section A (a) to (i) inclusive for the night hours according to the power.

F. Each new assignment of broadcast facilities, whether temporary or permanent, will be charged to quota assigned according to the foregoing and to the total hours of operation per broadcast day authorized by the license and regulations of the Commission.

110. In determining the day and night quota charge for a given assignment, the average time of local sunset shall be taken to be 6 p. m., local standard time.

111. Each of the five zones created by section 302 of the Communications Act of 1934 is entitled to have broadcast stations, the total value of the units shall be fair and equitably distributed among and allocated to the states in each zone in the ratio that the population of each of said states bears to the population of the zone. The total number of quota units of broadcast facilities to which each zone, and to which each state within the zone is entitled, based on the Fifteenth Census of the United States, 1930, is as follows:

## 100-WATT STATION POLICY ANNOUNCED

The Broadcast Division of the Federal Communications Commission, after considering Section 307 (b) of the Communications Act of 1934, relating to additional 100-watt stations, made an official announcement of policy on October 10.

Section 307 (b) of the Act reads as follows:

"Provided further, That the Commission may also grant applications for additional licenses for stations not exceeding one hundred watts of power if the Commission finds that such stations will serve the public convenience, interest, or necessity, and that their operation will not interfere with the fair and efficient radio service of stations licensed under the provisions of this section."

The Commission's statement in full text reads as follows:

"The Division decided that these stations will be assigned only to the channels designated in Rule 121 as local channels in the Rules and Regulations of the Commission, namely: 1200, 1210, 1310, 1370, 1420 and 1500 kilocycles. In determining interference that may be caused by these stations, the present power-frequency mileage separation tables of the Engineering Department will be followed and the technical requirements for the installation and operation will be the same as for all other broadcast stations.

"New broadcast stations will be licensed under this section only after a full showing has been made that the station will be operated in public interest. This showing must include full facts concerning the applicant's financial and technical ability to operate the station requested. It must be shown that program material is available such that programs can be built that will be of service and interest to the listeners. Proof must be submitted that sufficient possibilities are available that the applicant can provide adequate talent, personnel and properly maintained equipment.

"A review of existing stations in small centers of population reveals that a majority of these stations are having great difficulty in operating with adequate programs, maintenance and personnel.

"Past records show that in many cases applicants hope to obtain a limited facility and expect at a later date to materially increase that facility. The present allocation does not permit such later increases and accordingly the Commission must have proof that the assignment, as requested, has a reasonable promise of success."

## TRADE COMMISSION CONTINUES SURVEY

Expressing gratification at the cooperation furnished by the network systems, stations and advertisers, the Federal Trade Commission on October 18 announced that it would continue its survey of radio advertising in the hope that cooperation would be continued. The announcement of the Commission follows:

"Because of the immense amount of work involved in reading and checking the advertising programs, the Commission has for the present, at least, adopted the policy of making the call by zones, of which the country has been divided into five. Today's call is for continuities to be submitted by the stations in Maine, New Hampshire, Vermont, Rhode Island, Connecticut, Massachusetts, New York, New Jersey, Delaware, Maryland, District of Columbia and Puerto Rico. Calls upon the other four zones will be made later.

"In the Commission's letter making the call for the submission of the advertising continuities, the fact is noted that on the first call, made to cover broadcasts during the month of July, the stations replied one hundred per cent. The Commission's letter says that this is 'a confirmation of our belief that the radio industry would cooperate wholeheartedly with the Commission in its work of eliminating untruthful advertising from the air.' The Commission feels that a promising start has been made and that real progress has been achieved.

"With respect to the procedure as to electrical transcription of advertising matter, the Commission has made a modification to the extent that hereafter the Commission desires copies to be furnished of all commercial announcements appended to or given in connection with a transcription, electrical or otherwise, where such commercial programs are delivered or read by an announcer in the local stations.

"In response to its first call, covering advertising programs for the month of July, the Commission received 180,877 continuities. Of these, 161,466 were found to be subject to no criticism and were filed without further action. The remaining 22,411 were referred for further examination. Of the ten network systems and 598 broadcasting stations in the country, all filed their continuities in compliance with the Commission's request, while the con-

tinuities submitted by transcription companies represent 95 per cent of the total volume of such advertising.

"The Commission is very much gratified at the cooperation furnished by the network systems, the stations and the advertisers and is much encouraged over the progress made in ridding radio advertising of false and misleading matter."
